			Quantity		Note:	Source:
	Measurement unit	High	Central	Low		
Average estate characteristics						
Households per estate	hh		150		Peabody pilot implemented on estates with 100 to 200 flats	Resource London
Blocks per estate	Blocks		5		Assumption. Need approx. 5 bins per 100 households to reach FRP minimum capacity	Alma assumption
Bin stores per block	Bin stores		1		Assumption. Need approx. 5 bins per 100 households to reach FRP minimum capacity	Alma assumption
Noticeboard per block	Noticeboards		1		Assumption.	Alma assumption
Chutes per bin store	Chutes		1		Assumption.	Alma assumption
Recycling bins per bin store	Bins		2		Assumption. Need approx. 5 bins per 100 households to reach FRP minimum capacity	Alma assumption
Rubbish bins per bin store	Bins		3		Assumption.	Alma assumption
Bin/waste attributes						
Waste % sent to landfill	%		10.4%		Based on 2017/18 split of residual waste between landfill and incineration in London (DEFRA 2019). Note that incineration includes some non efw volumes.	DEFRA (2019)
Waste % sent to efw	%		89.6%		Based on 2017/18 split of residual waste between landfill and incineration in London (DEFRA 2019). Note that incineration includes some non efw volumes.	DEFRA (2019)
Recommended recycling capacity for FRP	litres/hh/wk		60		FRP recommends offering of minimum 60 litres/hh/week	Resource London FRP toolkit
Quantity/time assumptions						
Kg per metric tonne	Kg/tonne		1,000		Assumption.	
Minutes per hour	Minutes		60		Assumption.	
Days per week	Days		7		Assumption.	
Weeks per year	Weeks		52		Assumption.	
Months per year	Months		12		Assumption.	
Staff assumptions						
Hours worked per day	Hours		7		Assumption.	
Days worked per year	Days		220		Assumption.	
London Living Wage	£/hr		11		Assumption.	
Benefit assumptions <u>FRP impact assumptions</u>						
	0/	High	Average	Lo		
Uplift in dry recyclable waste volume	%	39%	26%		% Based on results from the Peabody FRP pilot	Resource London
Reduction in contamination rate from FRP	percentage points	46%	24%	09	% Based on results from the Peabody FRP pilot	Resource London
Emissions assumptions Social cost of carbon	£/tonneCO2e		69.3		Non-traded values as estimated by BEIS for 2020 (2018 projection)	BEIS projections 2018
Energy from Waste (EfW)	CO2e emissions intensity (kg / tonne waste)		386		(2018 projection) [1]Efw saves 200kg/tonne of CO2e emissions vs landfill	[1] Simply Waste Solutions

Landfill	CO2e emissions intensity (kg / tonne waste)	586	[1] 586.53kg/tonne CO2e (Includes "collection, transportion and landfill emissions ('gate to	[1] BEIS conversion factors 2018 (for muncipal waste)
			grave'))	(acto)
Mix (London average)	CO2e emissions intensity (kg / tonne waste)	407	Alma calculation. Weighted average emissions intensities based on average split between efw/residual waste in London.	Alma assumption
CO2 emissions - recycling	CO2e emissions intensity (kg / tonne waste)	21	 [1] 21.38kg/tonne CO2e (includes transport to an energy recovery or materials reclamation facility only) 	[1] BEIS conversion factors 2018 (for muncipal waste)
Waste disposal costs	0.1	170		
Landfill	£/tonne	176	[1] Non-hazardous waste - landfill tax + gate fee. UK top range of £176	[1] WRAP comparing the costs of alternative waste treatment options (2019)
Energy from Waste (EfW)	£/tonne	125	[1] Gate fees only. UK top range of £125	 WRAP comparing the costs of alternative waste treatment options (2019)
Mix (London average)	£/tonne	130	Assumption. Weighted average gate fee + landfill tax based on average split between efw/residual waste in London.	Alma assumption
Disposal fees - MRF	£/tonne	18	Median MRF gate fee for London	[1] WRAP comparing the costs of alternative waste treatment options (2019)
Contamination cost (£)	£/tonne	176	Assumed same cost as landfill disposal	Alma assumption
