

## 2009 Mid-Year Population Estimates

### Key features:

- The resident population of Greater London as at 30th June 2009 was estimated to be 7.75 million, an increase of 85.2 thousand from the previous year.
- Whereas in 2007-08 London had the third highest growth rate of all English regions, this year the growth rate is 1.11 per cent and ranks first out of the nine regions. The East grew at 0.86 per cent and the South East at 0.80 per cent
- This population growth was driven mainly by natural change (excess of births over deaths) which added 78,500 to London's population. London contributed 39.6 per cent to the natural change in England, while accounting for only 15.0 per cent of the total population.
- The largest percentage borough increases in London were:
  - Tower Hamlets (3.5 per cent)
  - Barking & Dagenham (2.4 per cent)
  - Camden (2.1 per cent)
- Only two boroughs were estimated to have had population declines:
  - Kensington & Chelsea (-0.7 per cent)
  - Newham (-0.5 per cent)
- Births (2008-09) were 127,700, an increase of 100 compared with the previous year.
- Deaths (2008-09) were 49,300, a decrease of 600 compared with the previous year.
- In 2008-09 net migration together with other changes resulted in a net gain of 6,800 people. This compares with a loss of over 11,600 in 2007-08. However this relatively small balancing change disguises the considerable population turnover that takes place in London.
- The net outflow from London to the rest of the UK, at 32.0 thousand, was the lowest since mid-1985.
- Net international migration to London, at 39.6 thousand, was at its lowest level since mid-1995.

## **Background**

On 24<sup>th</sup> June 2010 the Office for National Statistics (ONS) issued mid-2009 population estimates for all local authorities in England and Wales. This *Update* analyses the resident population estimates for Greater London and the London boroughs, both separately as well as within the national context.

Mid-year estimates relate to the usually resident population. These estimates include long-term international migrants (people expressing an intention to stay in the UK for at least a year). They do not include short-term migrants; people who intend to stay or leave the UK for less than a year.

Estimates build on the mid-2001 estimates and are available for constituent administrative areas (Government Office Regions, counties, local authority district and strategic health authority areas in England).

These estimates do not form the basis of the current ONS subnational population projections. The ONS 2008-based subnational population projections were released on 27<sup>th</sup> May 2010. The current subnational population projections use the revised mid-2008 population estimates released by ONS on 13<sup>th</sup> May 2010. The revised population estimates for 2001 to 2008 incorporated revised estimates of the distributions of student migration within the UK and international migration. Based on precedent the 2008-based subnational population projections are expected to be used by CLG in the allocation process for the next local authority three-year financial settlement from 2011/12 to 2013/14.

## **Data Availability**

The main data relating to population estimates by age and gender and the annual change analyses are available to download from the ONS website at:

<http://www.statistics.gov.uk/statbase/Product.asp?vlnk=15106>

## Results for London

ONS mid-2009 population estimates for London give a total resident population of 7.75 million, an increase of 85,200 on the previous year. This represents an annual growth rate of 1.1 per cent. London had the largest growth in population out of all Government Office Regions (GORs) between mid-2008 and mid-2009.

| West Midlands            | 5,280.7        | 5,408.4        | 5,431.1        | 22.7           | 0.4        | 150.4          | 2.8        |
| East of England          | 5,400.5        | 5,717.4        | 5,766.6        | 49.2           | 0.9        | 366.1          | 6.8        |
| <b>London</b>            | <b>7,322.4</b> | <b>7,668.3</b> | <b>7,753.6</b> | <b>85.3</b>    | <b>1.1</b> | <b>431.2</b>   | <b>5.9</b> |
| South East               | 8,023.4        | 8,368.5        | 8,435.7        | 67.2           | 0.8        | 412.3          | 5.1        |
| South West               | 4,943.4        | 5,210.4        | 5,231.2        | 20.8           | 0.4        | 287.8          | 5.8        |

The population increase of 85,200 is composed of a number of key components: births, deaths, migration (both UK and international inflows and outflows) and 'other changes'.

There were 127,700 births in 2008-09, an increase of 100 births compared with the previous year. Deaths declined by 600 to 49,300. Consequently natural change (the excess of births over deaths) for 2007-08 was 78,500, an increase of just under 1,000 compared with the previous year.

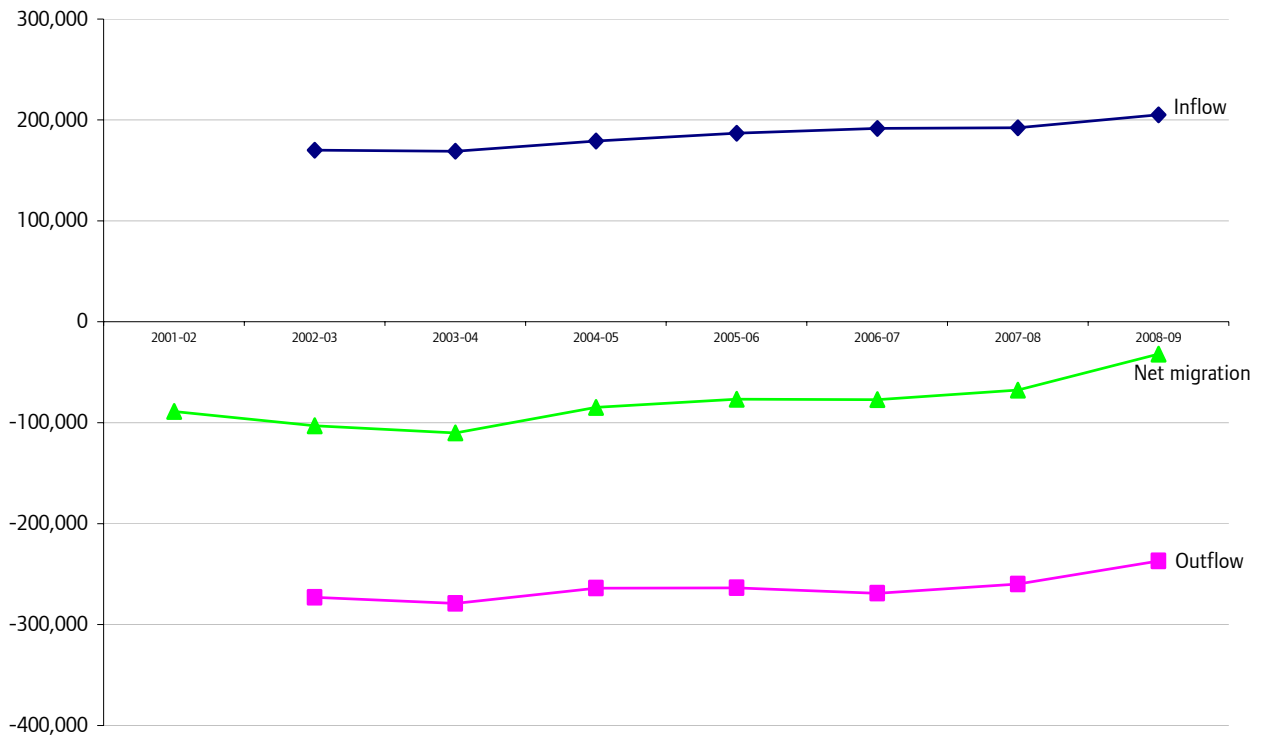

**Table 2: Components of Change, UK Countries and GORs, 2008-09**

| West Midlands            | 5,408.4                | 71.1           | 51.4        | 19.7              | 3.0                                 | 22.7            | 5,431.1                |
| East of England          | 5,717.4                | 71.1           | 51.9        | 19.1              | 30.1                                | 49.3            | 5,766.6                |
| <b>London</b>            | <b>7,668.3</b>         | <b>127.7</b>   | <b>49.3</b> | <b>78.5</b>       | <b>6.8</b>                          | <b>85.2</b>     | <b>7,753.6</b>         |
| South East               | 8,368.5                | 102.8          | 75.6        | 27.2              | 40.0                                | 67.2            | 8,435.7                |
| South West               | 5,210.4                | 58.0           | 53.1        | 4.9               | 15.9                                | 20.9            | 5,231.2                |

Total net migration and other changes combined for the year is estimated to be a gain of 6,800 compared to a loss of 11,600 in the previous year. Since 2001 this is the first year that London has gained population through net migration.

Figure 1 shows the increase is a result of both a reduced outflow from London to the rest of the UK as well as an increased inflow to London from the rest of the UK. The net loss of 32.0 thousand in 2008-09 was the lowest since mid-1985 and was combination of significantly reduced outflow and a continuing rise in the inflow. The outflow has fallen from 269 thousand in 2006-07 to 237 thousand in 2008-09.

**Figure 1: Internal (UK) migration flows, 2001-02 to 2008-09, Greater London**

Inflow and outflow data not available for 2001-02

Figure 2 shows that between in 2008-09 there was an increased outflow from London to overseas, compared with 2007-08, of 16 thousand resulting in a decrease in the net international migration to London to 39.6 thousand, the lowest level since mid-1995.

**Figure 2: International migration flows, Greater London, 2001-02 to 2008-09**

Since 2001 London's population is estimated to have grown by 431,200 persons, or 5.9 per cent. Over the eight-year period the consistent trends have been increasing numbers of births (from 104,000 in 2001-02) and decreasing deaths (from 57,000 in 2001-02). Hence natural change has grown considerable from 47,000 in 2001-02 to 78.5 thousand in 2008-09.

To conclude, both the increasing natural change and the significant decrease in the net migration outflow to the rest of the UK have contributed to the highest annual growth in London's population since 2001. The level of growth has been held back only by the increased migration outflow to overseas.

## Results for London Boroughs

The largest percentage increases amongst London boroughs were in the City of London, Camden and Southwark, where estimated population for 2007 were 1.9 per cent or more higher than the estimates in 2006. Four London boroughs, Brent, Haringey, Ealing and Enfield, were estimated a smaller population in 2007 than in 2006.

**Table 3: Mid-year population estimates and population change, London boroughs**

NB: Data may not sum due to rounding

Since 2001 six London boroughs, Westminster, Tower Hamlets, Southwark, Camden, Redbridge and Barnet have been estimated to have had considerable population growth. The population of Westminster has been estimated to increase by over 46 thousand, or 22.7 per cent, since 2001. On the other hand the populations of Brent and

Newham are estimated to have fallen between 2001 and 2009, however in 2008-09 Brent was estimated to have grown, but Newham was joined by Kensington & Chelsea as the only boroughs to have estimated reductions in their populations.

**Table 4: Components of population change 2008-09, London boroughs, thousands**

|                            | Mid-2008 population | Live births  | Deaths       | Natural change | Net migration & other changes | Total change | Mid-2009 population |

NB: Data may not sum due to rounding

All boroughs had positive natural change, with the largest being 4.5 thousand in Newham. Overall Outer London received net immigration while Inner London had net emigration, but the greatest net inflows were estimated for Tower Hamlets (4.8 thousand) and Camden (2.8 thousand). The largest net outflows were in Newham (-5.7 thousand) and Haringey (-2.9 thousand).

Table 5 shows the estimated migration flows for the London boroughs. Only five boroughs, led by Wandsworth at 1.7 thousand, had a net international outflow, while the largest international net inflows were seen in Tower Hamlets, Camden and Hounslow. Twenty boroughs were estimated to have had a net internal migration loss, led by Newham (7.9 thousand) and Brent (5.2 thousand). The largest estimated internal net gains were seen in Havering (1.5 thousand) and Sutton (1.4 thousand). Five boroughs were estimated to have had a total inflow from all origins of over 30 thousand with the highest being 36.5 thousand persons estimated to have moved to Wandsworth, which also had the greatest outflow (37.3 thousand). Lambeth had the second highest flows in both directions.

**Table 5: Migration flows, 2008-09, London boroughs**

|                      | Internal (UK) Migration |         |        | International Migration |         |        |
|----------------------|-------------------------|---------|--------|-------------------------|---------|--------|
|                      | Inflow                  | Outflow | Net    | Inflow                  | Outflow | Net    |
