

Appendix II

This appendix presents each set of graphical plots. The graphs have been produced for each SAM band, with one graph related to the average annualised delivery rate and one related to the best 3-year rolling average. Graphs have been generated for each of the three related site types (single unit infill, multi-unit infill and intensification).

In both plots, relevant LPAs within the specific SAM band are presented on the x-axis whilst the respective rates (in %) are shown on the y-axis. The dashed grey line represents the uplifted rate for the specific SAM band (prior to the final 25% uplift).

In the annualised average rate graph (bottom panel of each graph pair), the coloured bubbles are the 15-year average rate for the specific LPA in the specific SAM band. In the 3-year rolling average graph (top panel of each graph pair), the coloured bubbles are the best performing 3-year rolling average (with the end of that window labelled next to the bubble). The colours of the bubbles specify different rate thresholds:

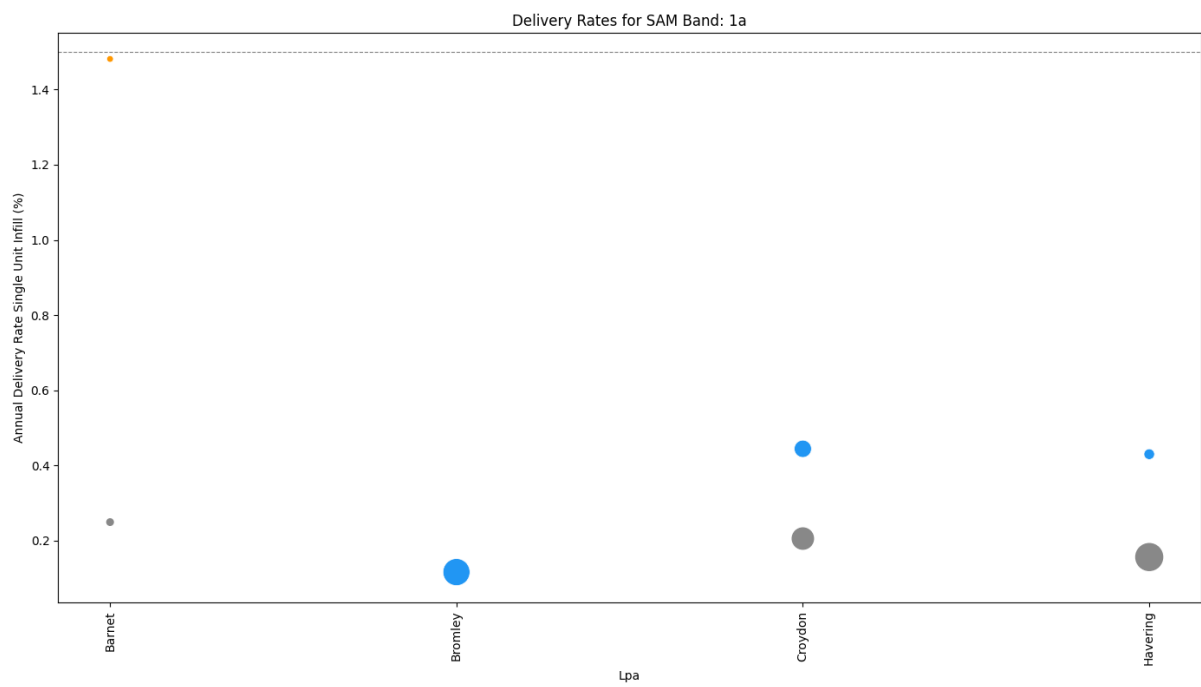

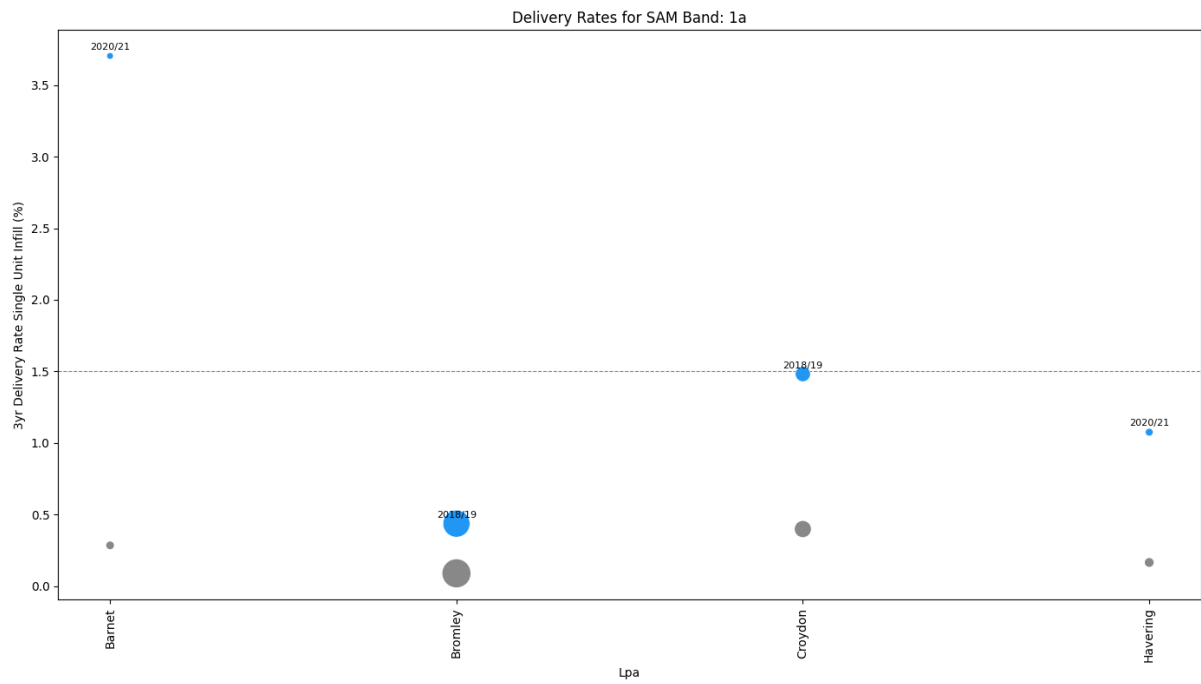

- Blue: rate less than 0.5%
- Green: rate between 0.5% and 1%
- Orange: rate between 1% and 2%
- Red: rate greater than 2%

For the average rate graphs, the grey bubble represents the average annualised delivery rate across all SAM bands for the associated LPA, whilst for the 3-year rolling average graphs, the respective bubble represents the average of the 3-year rolling window for that specific LPA within that specific band. The size of the bubble is proportional to the total identified capacity for each LPA (scaled against its peers in the same plot).
