Greater London Authority (LA100032379) 2005

Introduction

This report provides a summary of demographic and related data for each local authority in Greater London and for the five *London Plan* Sub-Region Development Framework areas. The profiles are designed to provide an overview of the population in each area by combining a range of data on the population, the electorate, households, education and the labour force. All data, except where otherwise stated, relate to people who live in the area, ie they are residence-based.

Each borough and sub-region is compared to equivalent statistics for Greater London, and additional data for Greater London is provided on separate pages. The map on the previous page shows the London boroughs and the Sub-Regional boundaries.

Below each table, the data sources are acknowledged, while the Appendices expand further on the definitions and terminology used in this report, as well as a more general overview of demographic terminology.

The GLA's Data Management and Analysis Group (DMAG) has produced these profiles, using mainly data for 2003. However, where applicable, the profiles have incorporated 2001 Census data, where no more up to date information currently exists, for example some of the housing data.

A number of 2001 Census variables – eg ethnicity and religion – have not been included, but were published in the equivalent *DMAG Briefings* (2004/3 and 2004/17).

Appendix A

ONS mid-year estimates

Mid-2003 estimates of resident population were published by ONS on 9 September 2004. At this time, revised estimates for 2001 and 2002 were also released (the second revision for mid-2001). On 7 October revised 1992 to 2000 mid-year estimates were released, consistent with 2001, 2002 and 2003. The 1991 mid-year estimates were considered final at the previous revision in February 2003.

Revisions to the mid-year estimates

Adjustments were made to the mid-year estimates after a significant amount of work was undertaken by ONS, in the form of *Longitudinal Studies* and *Local Authority Studies*. Notable revisions took place in Westminster and Manchester, with smaller revisions to some other local authorities such as Wandsworth and Southwark. Two *DMAG Briefings* are available, which look in detail at the reason behind and the effects of the revisions - *2004/20 ONS Mid-year Population Estimates 2001, 2002 (revised)* and *2004/23 ONS Mid-year Population Estimates: 1991 to 2003*. In addition to 1991 being final, ONS also consider that the consistent series 1992 to 2001 is final.

Definition of resident population

The estimated population of an area includes all people who usually live there, whatever their nationality. Members of HM and US Armed forces in England and Wales are included on a residential basis wherever possible. HM forces stationed outside England and Wales are not included. Students are taken to be resident at their term-time address.

Further work

The ONS is starting work on a new round of Local Authority Studies, for 2005/6 and also considering whether it is feasible to carry out a "mid-decade mini Census", known as the 2007 Special Population Study (SPS). The 2007 SPS would not look at every area and would be a count from a sample. There will be no overlap in area selection between the 2004 LA Studies, the 2005/6 LA Studies and the 2007 SPS.

Appendix B

GLA 2003 Round Population Projections – Scenario 8.1

The Greater London Authority produces annual demographic projections at borough and ward level; the population data are broken down by single year of age and gender for each geographic area.

The 2003 Round projections in this *Briefing* are based upon the 2001 Census data and revised (first revision in September 2003) 2001 mid-year estimates. They were produced in October 2003.

Future levels of fertility are based on borough level age-specific fertility rates for 1995-97, adjusted to actual births recorded in each year up to 2001-02, together with the Government Actuary's (GAD) 2002-based assumptions about the future changes in the Total Period Fertility Rate (TPFR)

Future mortality rates are based on life tables calculated for each borough group using data for 1995-97. These are adjusted in each borough to match actual deaths in each year up to 2001-02. After 2002 the rates are improved using the GAD 2002-based forty-year improvement factors specific to age and gender.

These population projections also use migration flows in 2002-03 based on data for 1997-2002. After 2003 the inflows from outside London are held constant as are all probabilities of London residents moving within and from London. The borough distribution is adjusted to take full account of the London Housing Capacity Study's (LHCS) estimates of new homes in the periods 2001-06, 2006-11 and 2011-16.

Much of the data detailed above has since been updated, however one key data set hasn't; the 2004-5 LHCS is due to be released in May 2005, and without these data the GLA projections cannot be produced consistently with the Mayor's *London Plan*.

Once these figures are available, the GLA 2004 Round Population Projections can be released taking into account not only the 2004-5 LHCS, but

- Revised 2001 and 2002 mid-year estimates
- New 2003 mid-year estimates
- 2002-03 births, deaths and electorates
- 2000-02 fertility and mortality rates, incorporating GAD TPFRs and mortality rates
- Migration profiles from the 2001 Census.

Appendix C

Vital Statistics 2003

Vital Statistics 2003 relate to events occurring in the resident population. Unless stated, all rates are calculated using ONS mid-2003 Population estimates.

Definitions

Crude Birth/Death Rate

Crude Birth/Death Rates indicate the number of births/deaths per thousand resident population at mid-year.

General Fertility Rate

The General Fertility Rate is the number of live births per thousand resident women aged 15-49.

Total Period Fertility Rate (TPFR)

Total Period Fertility Rate indicates the average number of children that would be born to a woman if the current age-specific patterns of fertility persisted throughout her childbearing life.

Standardised Mortality Ratio (SMR)

Standardised Mortality Ratio indicates how the mortality of a given area compares with the national level, after allowing for differences in age structure.

The SMR represents total observed deaths as a percentage of expected deaths, which are calculated as the number that would occur if the population of the area experienced the age/sex mortality rates of England and Wales.

TPFR and SMR data are calculated using births by single year of age of mother and deaths by single year of age and gender, as appropriate. These data by single year of age were available for 2002, but due to disclosure control issues, were not released by ONS for 2003. As a result the TPFRs and SMRs were calculated using 2002 births and deaths, and mid-2002 estimates.

Natural Change

Natural change is live births less deaths.

Expectation of life at birth

These data are calculated using *Life Tables*, produced with average deaths and population for 2000, 2001 and 2002, by single year of age and gender. Expectation of life at birth is the number of years an individual would be expected to live if current mortality rates in the area remained the same. Males and females are always taken separately due to the differences between the genders. More detailed results and background on *Life Tables* is available in *DMAG Briefing 2005/10: 2000-02 Life Tables*.

Appendix D

Migration

Mid-2002 to Mid-2003 Internal Migration, Office for National Statistics

Internal Migration figures at the local authority level are derived from the combination of National Health Service Central Register (NHSCR) continuous monitoring and changes in the patient registers that are available annually.

National Health Service Central Register

The NHSCR is a record of all NHS patients. It ensures that medical records are effectively used by the Health Authorities and that General Practitioners are paid correctly.

Information is passed to the NHSCR electronically from Health Authorities based upon patients who re-register with General Practitioners in their area. The data are specific to age and gender of the patient and the former and current health areas of registration.

Health Authority Patient Registers

Every Health Authority in England and Wales holds a register of the patients registered with General Practitioners within their area of responsibility. This contains the NHS number, gender, date of acceptance at the health authority and importantly the postcode of address of the patient. By obtaining a download from each patient register on an annual basis combining all 104 patient register extracts together, ONS can create a total register for the whole of England and Wales. Comparing records in one year with those of the previous linking on NHS numbers enables the identification of people who change their postcode and therefore may be defined as a person who, between one year and the next, changes their area of residence.

The two files are linked such that the number of migrants at local authority level based upon the patient registers is grossed up to allow for the number of all persons recording a change of address at Health Authority level throughout the year under continuous monitoring using the NHSCR data.

International Migration

International migration data are estimated from the International Passenger Survey (IPS). The IPS is a voluntary sample survey which is conducted continuously at the main ports of entry into the UK, ie air, sea, Channel Tunnel. Information on age, sex, marital status and citizenship are all collected by the survey, and people are surveyed both entering and leaving the UK. Figures on international migration are published annually through the ONS *MN Series*. Data in this *Briefing* are taken from the change analysis of the 2003 mid-year estimates.

Asylum Seekers and Visitor Switchers

The data shown in this *Briefing* have been taken from the components of change in the 2003 mid-year estimates. Visitor switchers are people who on entry to the UK are remaining for under one year, but who subsequently stay for greater than a year. The data shown are not the total flows rather an estimate of flows that are not already included in the international migration flows from the IPS. Care must be taken when using these figures as they are **not** National Statistics, and as such they do not meet the

stringent requirements made of National Statistics data. The data are only really fit for uses such as population modelling and understanding population change.

Migration by Ethnicity, 2001 Census

In the 2001 Census there was a question on where the respondent lived one year previously. These data have been used to create migration flows for 2000-2001. As the Census also collected data by ethnicity, the figures can be presented for the five broad ethnic groups. Many persons indicated that they had changed their address – but had no usual residence one year previous. These data are also shown.

Appendix E

Council Tax Dwellings

Council Tax Implied Total Dwellings on Valuation List, 2004

Each local authority submits annual returns to the Office of the Deputy Prime Minister (ODPM) relating to the number of properties on their valuation list as at November each year. The properties are categorised by the Tax Band (A to H) under several headings:

- Total Chargeable Dwellings
- Exempt Dwellings
- Dwellings Demolitions and Outside of Area of Authority
- Chargeable Dwellings with Disabled Relief
- Chargeable Dwellings with 25% discount
- Chargeable Dwellings with 50% discount
- Chargeable Dwellings with no discount
- 'Equivalent Dwellings'
- Band D Equivalent Dwellings

The data shown in the *Profiles* are for October 2004, with changes since October 2001, and relates to Total Chargeable Dwellings.

Appendix F

Households

As defined in the 2001 Census definitions handbook, a household comprises *one person living alone, or a group of people (not necessarily related) living at the same address with common housekeeping – that is, sharing either a living room or sitting room or at least one meal a day.*

Tenure

The tenure of a household refers to whether the accommodation is owned (either with or without a mortgage, or shared ownership) or rented (private, social). The data shown in this *Briefing* applies to the number of households (ie excludes communal establishments) by tenure of the household.

Household and family type

These data were made available through a *Commissioned Census Table*, commissioned by ODPM, and refer to the number of households in an area by the type of family/household type as defined by the household representative.

The Household Membership Types, as defined by the ODPM, are;

- Eldest husband in a household with at least one married couple/family
- Eldest male cohabitee in a household with no married couples, but at least one cohabiting couple/family
- Eldest male lone parent (female lone parent if no male present) with dependent child(ren) in a household with no couple families
- Person living alone
- Eldest male (or eldest female if no males) in a multi person household with no couple families and no lone parent families with dependent child(ren)
- Husband in concealed married couple family
- Male cohabitee in concealed cohabiting couple family
- Parent in concealed lone parent family with dependent child(ren)

A concealed family is one where there already exists at least one other family in the same household and the household representative is in another family.

Appendix G

RPF29 Summary of Register of Electors, 2004 (October 2003), Population Estimate Unit, Office for National Statistics

The register of electors shows the number of local government electors for each local authority and parliamentary electors for each parliamentary constituency.

In this *Briefing*, data for the total number of local government electors is shown, as well as the number of attainers separately (see below for definition). The total number includes residential qualifiers (see below), Peers, European Union citizens and attainers.

The 2004 figures are derived from data supplied to the Office for National Statistics by Electoral Registration Officers and shows the number of people who on 1 December 2003 were registered to vote in local elections. These are based on a qualifying date of 15 October 2003.

To qualify as a resident, a person needs to be normally living at the address on the qualifying date, even if temporarily absent. People having more than one place of residence, such as students and those with second homes, may therefore be included on more than one register.

The term attainer is used to describe a person who attains the age of 18 during the currency of the register, and is entitled to vote at an election held on or after his or her eighteenth birthday.

Appendix H

Education Statistics

Statistics of Education Schools in England 2004 edition, Department of Education and Skills

The new edition of "Statistics of Education Schools in England" includes school data for the academic year 2003/2004, which was collected in January 2004. The data relates to England and local authorities within England and applies to the LEA of the school rather than the residence of the pupil. The National Assembly for Wales collects their own statistics on schools and pupils in Wales, however these figures are not necessarily comparable with those from the Department for Education and Skills.

Most of the school information is from the Pupil Level Annual Schools' Census (PLASC), which is undertaken in January each year. In January 2002, for the first time, the Annual Schools' Census received individual pupil level data from maintained primary, secondary and special schools. In January 2003 pupil level data collection was expanded to include non-maintained special schools and academies. Whilst the collection of the PLASC for these schools has been very successful, it is possible that there is some discontinuity resulting from the change, though this is not thought to be significant.

Definitions

Nursery Schools

Nursery schools provide education primarily for children below compulsory school age (under 5).

Primary Schools

Primary schools consist mainly of infant schools for children aged 5 to 7, junior schools for those aged 7 to 11 and junior and infant schools for both age groups. Primary schools make provision for the youngest children of compulsory school age (5 and above), however, the majority of London schools also provide a reception class for pupils aged 4.

In addition, first schools cater for ages from 5 to 8, 9 or 10. They are the first stage of a three-tier (first, middle and secondary) school system. Many primary schools provide 'nursery' classes for under-fours. A 'nursery' class is one which includes amongst its staff a qualified nursery assistant.

Secondary Schools

Secondary education is provided mainly in three types of school, the comprehensive school, the secondary modern and the secondary grammar. There are also small and decreasing numbers of technical schools.

Schools which do not fall into any of the categories already mentioned are classified as other schools. City Academies and City Technology Colleges (see following) which are publicly funded but registered as independent schools, fall into this category.

Special Schools

Special schools, both day and boarding, provide education for children with special educational needs who cannot be educated satisfactorily in an ordinary school.

Maintained special schools are run by local education authorities which pay all the expenses of maintenance.

Non-maintained special schools are run by voluntary bodies: they may receive some grant from the Department for capital work and for equipment, but their current expenditure is met primarily from the fees charged to the local education authorities for pupils placed in the schools.

Pupil Referral Unit

Pupil Referral Unit is a centre for children of primary or secondary school age who have been temporarily withdrawn from mainstream provision.

Independent Schools

An independent school is legally defined as any institution providing full time education for five or more pupils of compulsory school age that is neither maintained by a local education authority nor a non-maintained special school. All independent schools are initially inspected by HMI from Ofsted. Just over half of all independent schools choose to belong to the professional associations constituting the Independent Schools Council (ISC).

City Technology Colleges and Academies

City Technology Colleges

These take the form of a charitable company limited by guarantee. The sponsors constitute an educational trust and will own or lease the college and appoint their representatives to the Board of Governors. The members of a CTC will consist of nominees of the sponsoring company and the Secretary of State. When the CTC is opened it will be registered as independent school and is included in the independent schools tables.

Academies

These have been created more recently, but are essentially the same as CTC's with the same funding and status. However, while CTC's focus more on technology subjects, the Academies take a broader approach and tend to be found more in inner city areas.

Because of the similarities and relatively small numbers, City Technology Colleges and Academies have been taken together.

Further Education Statistics, Department of Education and Skills

The number of students in Further Education is collected by the DfES. These figures, along with other data, from 1997/98 to 2001/02 are available on the DfES website for all LEAs within England. The data relate to the LEA of **residence** of the pupil. Data can be found at: <http://www.dfes.gov.uk/rsgateway/region7.shtml>.

Appendix J

Labour Force

Annual Labour Force Survey

The Labour Force Survey (LFS), carried out by the Office for National Statistics, is one of the largest regular household surveys of the UK. The data collected relate to a wide range of information about people and their labour market circumstances. The survey is carried out either in person or by telephone and has a high response rate. Although interviews are carried out on a continuous basis, the data are generally released either quarterly or annually. For data at a local area level, estimates are far more reliable from the annual dataset. The data presented in this *Briefing* are from the 2002-03 annual dataset, covering the period February 2002 to March 2003.

- Economic Activity – persons aged 16 and over who are in employment or are unemployed by the International Labour Organisation definition (see below).
- Employment – people aged 16 and over who did at least 1 hours' work in the reference week; those who had a job that they were temporarily away from; those on government supported training and employment programmes; and those doing unpaid family work.
- Unemployment – the International Labour Organisation's measure of unemployment refers to people without a job who were able to start work in two weeks following their LFS interview and who had either looked for work in the four weeks prior to interview or were waiting to start a job they had already obtained.
- Economic Inactivity – people neither in employment nor unemployed.
- Part-Time – this is generally classified on the basis of self-definition.
- Self-Employed – this is also classified on the basis of self-definition.

Benefit rates - Department of Work and Pensions

The data used in this *Briefing* refer to August 2003 and cover 5 main statistics;

- Income Support – this can be paid to a person who
 - is in Great Britain
 - is aged 16 or over
 - is not working 16 hours or more a week
 - has less money coming in than the law says they need to live on.

From October 1996, Jobseeker's Allowance replaced IS for unemployed people. In general Income Support is now only available to people who are not required to be available for work such as pensioners, lone parents and sick and disabled people. The rates are calculated using population aged 16+.

- Incapacity Benefit – this replaced Sickness and Invalidity Benefits from 13 April 1995. It is paid to people who are assessed as being incapable of work and who meet the appropriate contribution conditions. Rates calculated using population aged 16 to 65 years.
- Attendance Allowance – this is a benefit for people over the age of 65 who are so severely disabled, physically or mentally, that they need a great deal of help with personal care or supervision. They could need either frequent attention coping with their bodily functions or continual supervision to stop them hurting themselves or others. This could be either during the day or at night. The denominator for rates is the 65+ population.

- Disability Living Allowance is available for people who become disabled before the age of 65. It replaced and extended Attendance Allowance and Mobility Allowance. People who could not qualify for Mobility Allowance or Attendance Allowance can get the lower rates of Disability Living Allowance. Rates are calculated using total population as a denominator.
- Jobseeker's Allowance (JSA) is a benefit for unemployed people or those working less than 16 hours a week and who are looking for full-time work. There are different types of JSA depending on whether you satisfy the National Insurance contributions conditions, pass the means test or are claiming as part of a couple. There are also strict criteria that must be met in respect of the claimant's labour market activity.

Appendix K

Deprivation

The Index of Multiple Deprivation 2004 (IMD2004) is one of the three indices from the Indices of Deprivation. The IMD is measured at Super Output Area (SOA) geographic area and covers 37 indicators in seven domains;

- Income deprivation
- Employment deprivation
- Health deprivation and disability
- Education, skills and training deprivation
- Barriers to Housing and Services
- Living environment deprivation
- Crime

These domains are combined to produce a single score for each SOA in England and then ranked for comparison.

The IMD2004 is created specifically for small areas but there are a number of summary measures for local authority areas, also allowing comparison across England. There are six different measures, each looking at different aspects of multiple deprivation. No single measure is considered more important than another and in comparing deprivation all should be taken into account.

The six measures are:

- **Average of SOA Scores** describes the overall position of people in the district by taking the population weighted average of the scores for each SOA within the district.
- **Average of SOA Ranks** again summarises the district as a whole, taking into account the population weighted ranks of both the deprived and less deprived SOAs.
- **Extent** depicts how widespread high levels of deprivation are in a district by considering the proportion of the district's population living in the most deprived SOAs in England.
- **Concentration** identifies a districts' 'hot spots' of deprivation by looking at the (population weighted) average rank of the most deprived SOAs containing ten per cent of the district's population.
- The **Income Scale** gives the number of people in the district who are income deprived.
- The **Employment Scale** gives the number of people in the district who are employment deprived.

The table in this *Briefing* presents the six measures detailed above, in terms of the rank among the 354 Local Authorities in England, as well as the actual average SOA score, for all London boroughs. IMD ranks have not been calculated for the five London sub-regions or for Greater London.

More detail on results and the background of the IMD2004 is available through the following *DMAG Briefings and Updates*;

DMAG Briefing 2005/5 - Indices of Deprivation 2004, An analysis of London wards based on SOA ranks and Social Exclusion Update 2004/3 – Deprivation in London, The Indices of Deprivation 2004 from ODPM.

Appendix L

Additional Data Sources

Data Management and Analysis Group (DMAG), GLA

In addition to demographic data, DMAG is also responsible for specific analysis on areas such as ethnicity, social exclusion, the 2001 Census and education. *DMAG Briefings* and analysis are available either direct from DMAG (see back cover for contact details), from individual London Boroughs, or via the GLA Extranet. The Extranet is a secure GLA website, which has limited access, and requires a password. Access to the Extranet may be granted on request. To apply for access to the Extranet, fill in the form found via the following link: <https://extranet.london.gov.uk/enquiry-form.jsp>.

GLA Economics, GLA

Established in May 2002, GLA Economics are responsible for assessing and monitoring the economic situation of London and providing economic analysis for policies and projects in areas such as transport, development and the environment.

Office for National Statistics (ONS) – <http://www.statistics.gov.uk>

The ONS is responsible for producing a wide variety of statistics, much of which is used in GLA analysis. Of particular interest, are;

- data from the Labour Force Survey (LFS), a household survey interviewing inhabitants of around 57,000 households each quarter. Analysis of LFS data includes employment, unemployment, ethnicity, disability and qualifications.
- the Claimant Count, a count of people claiming Jobseeker's Allowance
- vital statistics – births and deaths
- electorate data
- earnings data from the New Earnings Survey, a 1% sample of employees in employment which collects information on hours worked and earnings from the employers. Self-employed earnings are not included
- 2001 Census
- population estimates and projections
- Neighbourhood Statistics

Office of the Deputy Prime Minister (ODPM) – <http://www.odpm.gov.uk>

This department is responsible for policy on housing, planning, devolution, regional and local government and the fire service.

Department for Education and Skills (DfES) – <http://www.dfes.gov.uk>

The DfES is the department responsible for schools and education, including funding, policy and compiling statistics.

Government Actuary's Department (GAD) – <http://www.gad.gov.uk>

This is a department of actuaries, advising the Government on issues affecting public policy in order to help ensure the financial stability of the state and private pensions systems. The department, since 1954, has also been responsible for producing the official population projections for the UK and constituent countries.

Department for Work and Pensions (DWP) – <http://www.dwp.gov.uk>

The remit of DWP is primarily welfare reform, for example, helping people back into work while supporting those unable to work through Jobcentre Plus; tackling child poverty; and assisting independence for the elderly. Statistics available from DWP mainly focus around benefits, such as Child Benefit, Jobseeker's Allowance, Incapacity Benefit and the New Deal.

Nomis – <http://www.nomisweb.co.uk>

Nomis is run by the University of Durham on behalf of the Office for National Statistics. It was launched in 1981 and makes available a vast range of labour market statistics, such as employment, unemployment, earnings, and claimant data. It has recently introduced profiles for each local authority in Great Britain, covering information such as population, labour supply and demand and the number of VAT registered businesses

Regular Briefings from the GLA Data Management and Analysis Group
