# **Borough Demographic Profiles**

## **Introduction**

This report provides a summary of demographic and related data for each local authority in Greater London. The profiles are designed to provide an overview of the population in each area by combining a range of data on the population, the electorate, ethnic group populations, religion, education statistics and labour force statistics. All data relate to people who live in the area (residence-based).

Each borough is compared to equivalent statistics for Greater London and Greater London is compared to England and Wales when statistics are available.

The section on data sources provides information about the source of each section of data. The Appendices expand further on definitions and terminology used in this report, as well as a more general overview of demographic terminology.

The GLA's Data Management and Analysis Group (DMAG) have produced these profiles, using mainly data for 2002. However, where applicable, the profiles have incorporated the 2001 Census data, for example ethnicity, where no mid-2002 data exists.

Labour Force Profile, Census 2001, Office for National Statistics. Census table - Standard Table 28. See Appendix H.

**ONS Mid-Year Population Estimates: Percentage Change 1991 to 2002**  
Office for National Statistics - Mid-Year Estimates. See Appendix A

## **APPENDIX A**

### **MID-2002 POPULATION ESTIMATES, OFFICE FOR NATIONAL STATISTICS**

Mid-2002 estimates of the resident population of England and Wales were published by ONS on 26 September 2003. The mid-2001 estimates were also revised at this time, taking account of additional studies conducted by ONS in order to further improve understanding of the relationship of the 2001 Census results and population estimates.

#### **Definition of resident population**

The estimated population of an area includes all people who usually live there, whatever their nationality. Members of HM and US Armed forces in England and Wales are included on a residential basis wherever possible. HM forces stationed outside England and Wales are not included. Students are taken to be resident at their term-time address.

#### **Rebasing the mid-year population estimates in line with the 2001 Census**

The original mid-2001 population estimates were the first in a new series of estimates based on the 2001 Census. They were updated to take account of population change due to births, deaths and net migration in the period between census day (29 April 2001) and the mid-year (30 June 2001). However, the estimation of change over this short period, less than nine weeks, is small and the main determinant of the mid-2001 population estimate was the 2001 Census estimate for Census day. The revised mid-2001 estimates take account of late Census returns and persons now understood to have been missed in enumerated households.

#### **ONS Mid-year Population Estimates: Percentage Change 1991 to 2002**

In February 2003, the ONS released revised estimates for 1982 to 2000, in line with the 2001 Census and therefore comparable with the original mid-year estimates for 2001. Although it is the intention of ONS to make additional revisions to data from 1992 to 2000, in line with the revised 2001 estimates, the 1991 estimate is now considered final.

#### **Further revisions**

The ONS is currently carrying out work to look at areas where there may have been issues of undercounting in the 2001 Census. This could result in some revisions to the mid-2001 estimates for a small number of areas, which would have a knock on effect to the overall London figure, and of course, to the mid-2002 estimates. Most notably for London, this exercise is focussed on Westminster and Wandsworth.

## **APPENDIX B**

### **GLA 2003 ROUND POPULATION PROJECTION**

The Greater London Authority produces annual demographic projections at borough level.

#### **Summary of methodology**

Projections are available for population by single year of age and gender for each London borough. The 2003 Round is based upon the 2001 Census data and revised 2001 mid-year estimates.

Future levels of fertility are based on borough level age-specific fertility rates for 1995-97, adjusted to actual births recorded in each year up to 2001-02, together with the Government Actuary's 2002-based assumptions about the future changes in the Total Period Fertility Rate.

Future mortality rates are based on life tables calculated for each borough group using data for 1995-97. These are adjusted in each borough to match actual deaths in each year up to 2001-02. After 2002 the rates are improved using the Government Actuary's 2002-based forty-year improvement factors specific to age and gender.

The GLA 2003 Round Scenario 8.1 population projection uses migration flows in 2002-03 based on data for 1997-2002. After 2003 the inflows from outside London are held constant as are all probabilities of London residents moving within and from London. The borough distribution is adjusted to take full account of the London Housing Capacity Study's estimates of new homes in the periods 2001-06, 2006-11 and 2011-16.

## **APPENDIX C**

### **VITAL STATISTICS 2002**

Vital Statistics 2002 relate to events occurring in the resident population. All rates are calculated using ONS mid-2002 Population estimates.

#### **Definitions**

##### **Crude Birth/Death Rate**

Crude Birth/Death Rates indicate the number of births/deaths per thousand resident population at mid-year.

##### **General Fertility Rate**

The General Fertility Rate is the number of live births per thousand resident women aged 15-49.

##### **Total Period Fertility Rate**

Total Period Fertility Rate indicates the average number of children that would be born to a woman if the current age-specific patterns of fertility persisted throughout her childbearing life.

##### **Infant death.**

Infant death is defined as death of children under one year of age.

##### **Standardised Mortality Ratio**

Standardised Mortality Ratio indicates how the mortality of a given area compares with the national level, after allowing for differences in age structure.

The SMR represents total observed deaths as a percentage of expected deaths, which are calculated as the number that would occur if the population of the area experienced the age/sex mortality rates of England and Wales.

##### **Natural Change**

Natural change is live births less deaths.

## **APPENDIX D**

### **RPF29 SUMMARY OF REGISTER OF ELECTORS, OCTOBER 2002, POPULATION ESTIMATE UNIT, OFFICE FOR NATIONAL STATISTICS**

The register of electors shows the number of local government electors for each local authority and parliamentary electors for each parliamentary constituency.

In this Briefing, data for the total number of local government electors is shown, as well as the number of attainers separately (see below for definition). The total number includes residential qualifiers (see below), Peers, European Union citizens and attainers.

The figures are derived from data supplied to the Office for National Statistics by Electoral Registration Officers and shows the number of people who on 1 December 2002 were registered to vote in local elections. These are based on a qualifying date of 15 October 2002.

To qualify as a resident, a person needs to be normally living at the address on the qualifying date, even if temporarily absent. People having more than one place of residence, such as students and those with second homes, may therefore be included on more than one register.

The term attainer is used to describe a person who attains the age of 18 during the currency of the register, and is entitled to vote at an election held on or after his or her eighteenth birthday.

## **APPENDIX E**

### **STATISTICS OF EDUCATION SCHOOLS IN ENGLAND 2003 EDITION, DEPARTMENT OF EDUCATION AND SKILLS**

The new edition of "Statistics of Education Schools in England" includes school data for the academic year 2002/2003, which was collected in January 2003. The data relates to England and local authorities within England. The National Assembly for Wales collects their own statistics on schools and pupils in Wales, however these figures are not necessarily comparable with those from the Department for Education and Skills.

Most of the school information is from the Pupil Level Annual Schools' Census (PLASC), which is undertaken in January each year. In January 2002 the ASC introduced a major change in that maintained primary, secondary and special schools reported data at an individual pupil level for the first time. In January 2003 the collection of data at pupil level was further expanded to include non-maintained special schools and academies. Whilst the collection of the Pupil Level Annual Schools' Census (PLASC) for these schools has been very successful, it is possible that some discontinuity in the time series data has resulted from the change, though this is not thought to be significant. The availability of pupil level data means that there are now more ways in which the information can be analysed and manipulated.

#### **Definitions**

##### **Nursery Schools**

Nursery schools provide education primarily for children below compulsory school age (under 5).

##### **Primary Schools**

Primary schools consist mainly of infant schools for children aged 5 to 7, junior schools for those aged 7 to 11 and junior and infant schools for both age groups. Primary schools make provision for the youngest children of compulsory school age (5 and above), however, the majority of London schools also provide a reception class for pupils aged 4.

In addition, first schools cater for ages from 5 to 8, 9 or 10. They are the first stage of a three-tier (first, middle and secondary) school system.

Many primary schools provide 'nursery' classes for under-fours. A 'nursery' class is one which includes amongst its staff a qualified nursery assistant.

##### **Secondary Schools**

Secondary education is provided mainly in three types of school, the comprehensive school, the secondary modern and the secondary grammar. There are also small and decreasing numbers of technical schools.

Schools which do not fall into any of the categories already mentioned are classified as other schools. City Academies and City Technology Colleges (see overleaf) which are publicly funded but registered as independent schools, fall into this category.

### **Special Schools**

Special schools, both day and boarding, provide education for children with special educational needs who cannot be educated satisfactorily in an ordinary school.

Maintained special schools are run by local education authorities which pay all the expenses of maintenance.

Non-maintained special schools are run by voluntary bodies: they may receive some grant from the Department for capital work and for equipment, but their current expenditure is met primarily from the fees charged to the local education authorities for pupils placed in the schools.

### **Pupil Referral Unit**

Pupil Referral Unit is a centre for children of primary or secondary school age who have been temporarily withdrawn from mainstream provision.

### **Independent Schools**

An independent school is legally defined as any institution providing full time education for five or more pupils of compulsory school age that is neither maintained by a local education authority nor a non-maintained special school. All independent schools are initially inspected by HMI from Ofsted. Just over half of all independent schools choose to belong to the professional associations constituting the Independent Schools Council (ISC).

### **City Technology Colleges and Academies**

#### **City Technology Colleges**

These take the form of a charitable company limited by guarantee. The sponsors constitute an educational trust and will own or lease the college and appoint their representatives to the Board of Governors. The members of a CTC will consist of nominees of the sponsoring company and the Secretary of State. When the CTC is opened it will be registered as independent school and is included in the independent schools tables.

#### **Academies**

These have been created more recently, but are essentially the same as CTC's with the same funding and status. However, while CTC's focus more on technology subjects, the Academies take a broader approach and tend to be found more in inner city areas.

Because of the similarities and relatively small numbers, City Technology Colleges and Academies have been taken together.

## **APPENDIX F**

### **MID-2001 TO MID-2002 INTERNAL MIGRATION, OFFICE FOR NATIONAL STATISTICS**

Internal Migration figures at the local authority level are derived from the combination of National Health Service Central Register (NHSCR) continuous monitoring and changes in the patient registers that are available annually.

#### **National Health Service Central Register**

The NHSCR is a record of all NHS patients. It ensures that medical records are effectively used by the Health Authorities and that General Practitioners are paid correctly.

Information is passed to the NHSCR electronically from Health Authorities based upon patients who re-register with General Practitioners in their area. The data are specific to age and gender of the patient and the former and current health areas of registration.

#### **Health Authority Patient Registers**

Every Health Authority in England and Wales holds a register of the patients registered with General Practitioners within their area of responsibility. This contains the NHS number, gender, date of acceptance at the health authority and importantly the postcode of address of the patient. By obtaining a download from each patient register on an annual basis combining all 104 patient register extracts together, ONS can create a total register for the whole of England and Wales. Comparing records in one year with those of the previous linking on NHS numbers enables the identification of people who change their postcode and therefore may be defined as a person who, between one year and the next, changes their area of residence.

The two files are linked such that the number of migrants at local authority level based upon the patient registers is grossed up to allow for the number of all persons recording a change of address at Health Authority level throughout the year under continuous monitoring using the NHSCR data.

## **APPENDIX G**

### **COUNCIL TAX IMPLIED TOTAL DWELLINGS ON VALUATION LIST, MID-2002**

Each local authority submits annual returns to the Office of the Deputy Prime Minister (ODPM) relating to the number of properties on their valuation list as at November each year. The properties are categorised by the Tax Band (A to H) under several headings:

- Total Chargeable Dwellings
- Exempt Dwellings
- Dwellings Demolitions and Outside of Area of Authority
- Chargeable Dwellings with Disabled Relief
- Chargeable Dwellings with 25% discount
- Chargeable Dwellings with 50% discount
- Chargeable Dwellings with no discount
- 'Equivalent Dwellings'
- Band D Equivalent Dwellings

The data shown in the Profiles are the weighted average of the total dwellings as at 3 November 2001 and 3 November 2002 to get an estimate for mid-year, 2002.

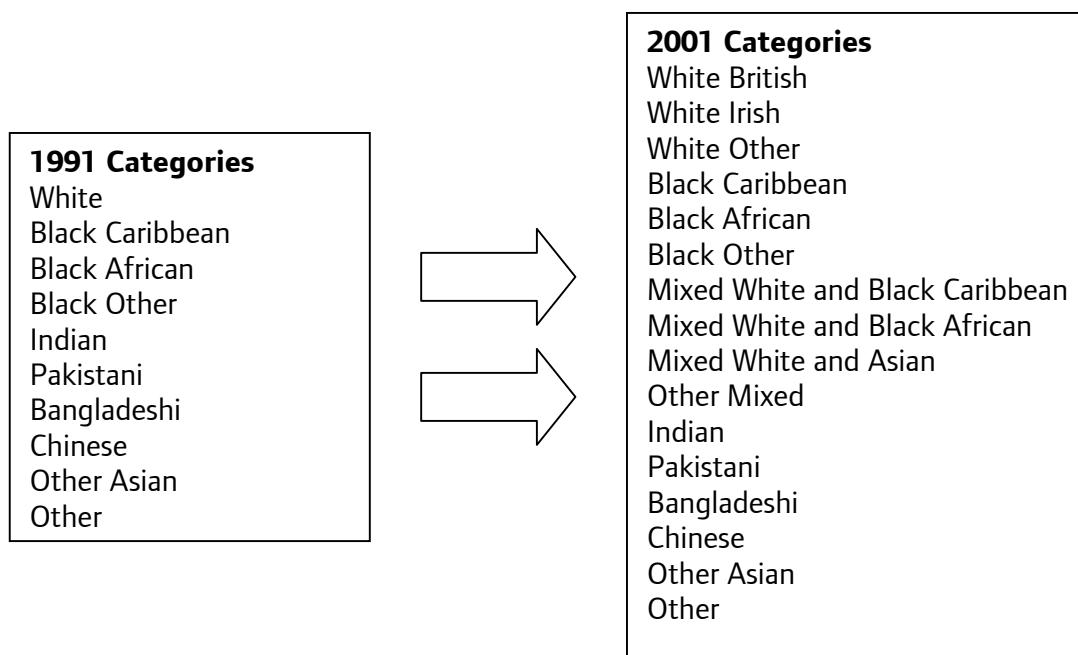

## APPENDIX H

### CENSUS 2001 ETHNICITY, RELIGION AND LABOUR MARKET PROFILE

The 2001 Census was carried out on 29 April 2001. It was a complete count of the United Kingdom, asking a set of questions relating to individuals' gender, age, ethnicity, religion, labour market participation and household circumstances. The first set of data was published on 30 September 2002 and subsequent datasets were released throughout 2003.

#### **Ethnicity**

In the 2001 Census, new ethnicity categories were used. These categories were different from those used in the 1991 Census, and other statistics, mainly because of the addition of 'mixed' categories. The hope was that this would reduce the amount of misclassification. The tables below show the old and new categories.

These new categories were chosen as a way of giving more choices to the respondent in order to more accurately record their ethnicity as well as still allowing some comparison with the 1991 Census data.

#### **Religion**

In the 2001 Census a new question on religion was introduced. This was the first ever voluntary question in a UK Census, however, a high response rate was achieved – around 93 per cent. Because of such a high response rate, the statistics on religion are likely to be as robust as those collected from compulsory questions.

## **Labour Market Profile**

The 2001 Census contained a number of questions relating to labour market status. These questions only applied to those people aged between 16 and 74. People outside of this age group are also excluded from questions on qualifications and mode of travel to work.

The data used within this briefing is primarily labour market data, however, data on students has been included as they also comprise an important part of the labour market.

## **Definitions**

### **Working-age**

This is defined as men aged 16-64 and women aged 16-59.

### **Employment**

A person is defined as employed if they did paid work in the week before the Census took place. This includes temporary or casual work, even if for only one hour; government-sponsored training schemes; being away from a job due to sickness, maternity leave, holiday or being temporarily laid-off; or doing paid, or unpaid, work for their own or family business.

### **Employees and self-employed**

The number of employees and self-employed workers is determined by the question 'Do (did) you work as an employee or are (were) you self-employed?' which related to a person's main job (the job in which the person usually works the most hours)

### **Full-time and part-time**

Working part-time is defined as working 30 hours or less per week and full-time is defined as working 31 hours or more per week.

### **Unemployment**

An unemployed person is someone who does not have a job, has looked for work in the last four weeks and is available to start a job in the next two weeks, or who is waiting to start a job. This is consistent with the International Labour Organisation (ILO) standard classification.

### **Economic activity and inactivity**

All people aged between 16 and 74 are either defined as economically active or economically inactive.

A person is defined as economically active if they are either employed or unemployed, by the definitions above.

Economically inactive people fall into the following categories; retired, student (excluding students who were working or economically active in some other way), looking after family/home, permanently sick/disabled and other. A person looking for work, but not available to start in the next two weeks, would be classed as inactive.

### **Economically active full-time students**

These are people (aged 16-74) in full-time education, including schoolchildren, who are economically active – ie they are employed or unemployed. At the time of the Census, economically active students numbered 157,006 in London. Of these, 126,806 were in employment and 30,200 were unemployed.

On standard Census tables on economic activity, economically active full-time students are excluded from the employment and unemployment totals and are listed separately under the heading 'economically active full-time students'. For this reason, data presented in the profiles mirror the Census tables in that;

- data on employment and unemployment exclude employed and unemployed students, and
- data on students are presented separately.

### **Rates**

The rates for employment, unemployment, economic activity and economic inactivity are given as percentages of all persons of working age.

## APPENDIX I

### ADDITIONAL DATA SOURCES

#### **Data Management and Analysis Group (DMAG), GLA**

In addition to demographic data, DMAG is also responsible for specific analysis on areas such as ethnicity, social exclusion, the 2001 Census and education. *DMAG Briefings* and analysis are available either direct from DMAG (see back cover for contact details), from individual London Boroughs, or via the GLA Extranet. The Extranet is a secure GLA website, which has limited access, and requires a password. Access to the Extranet may be granted on request.

#### **GLA Economics, GLA**

Established in May 2002, GLA Economics are responsible for assessing and monitoring the economic situation of London and providing economic analysis for policies and projects in areas such as transport, development and the environment.

#### **Office for National Statistics (ONS) – <http://www.statistics.gov.uk>**

The ONS is responsible for producing a wide variety of statistics, much of which is used in GLA analysis. Of particular interest, is;

- data from the Labour Force Survey (LFS), a household survey interviewing inhabitants of around 57,000 households each quarter. Analysis of LFS data includes employment, unemployment, ethnicity, disability and qualifications.
- the Claimant Count, a count of people claiming Jobseeker's Allowance
- vital statistics – births and deaths
- electorate data
- earnings data from the New Earnings Survey, a 1% sample of employees in employment which collects information on hours worked and earnings from the employers. Self-employed earnings are not included.

#### **Office of the Deputy Prime Minister (ODPM) – <http://www.odpm.gov.uk>**

This department is responsible for policy on housing, planning, devolution, regional and local government and the fire service.

#### **Department for Education and Skills (DfES) – <http://www.dfes.gov.uk>**

The DfES is the department responsible for schools and education, including funding, policy and compiling statistics.

#### **Government Actuary's Department (GAD) – <http://www.gad.gov.uk>**

This is a department of actuaries, advising the Government on issues affecting public policy in order to help ensure the financial stability of the state and private pensions systems. The department, since 1954, has also been responsible for producing the official population projections for the UK and constituent countries.

#### **Department for Work and Pensions (DWP) – <http://www.dwp.gov.uk>**

The remit of DWP is primarily welfare reform, for example, helping people back into work while supporting those unable to work through Jobcentre Plus; tackling child poverty; and assisting independence for the elderly. Statistics available from DWP mainly focus around benefits, such as Child Benefit, Jobseeker's Allowance, Incapacity Benefit and the New Deal.

**Nomis – <http://www.nomisweb.co.uk>**

Nomis is run by the University of Durham on behalf of the Office for National Statistics. It was launched in 1981 and makes available a vast range of labour market statistics, such as employment, unemployment, earnings, and claimant data. It has recently introduced profiles for each local authority in Great Britain, covering information such as population, labour supply and demand and the number of VAT registered businesses.
