Figure 3 : Zone of Theoretical Visibility Bare Earth, represents the worst case scenario. This treats landform as if it were 'bare earth' and illustrates the area within which the development would theoretically be visible assuming other vertical features within the landscape and built environment (such as buildings, infrastructure and vegetation) would not act as barriers to views toward the development.

Figure 4: Zone of Theoretical Visibility Visual Barriers, takes account of the effect that settlements and significant woodland blocks / belts would have on views toward the proposed development and therefore illustrates a more realistic area within which the development could theoretically be visible.
