

Overview and mitigation of Impacts of Covid-19

Briefing for Recovery Board and Taskforce
July 2020

Phase 1 of Covid-19 has taken a heavy toll on Londoners

- London has had at least **34k** cases and **8.5k** deaths to 14 July
- Weekly deaths now under 20 - down from peak of over 2,000 in April
- Cases spread across adults of all ages but highest deaths in the older population, males, and among BAME groups

Weekly Deaths in 2020

London - by date of occurrence

Health impacts have been disproportionate across different groups

- Large variation in rates of deaths involving COVID-19
- Disproportionate impacts on Black and South Asian communities
 - Mortality rates for black males **double** that of white males
- Greater mortality in areas of higher deprivation
 - COVID-related mortality rates for most deprived areas almost **double** those of least deprived

 0 to 10 Cases

After the dramatic fall in London business activity, new businesses, consumer confidence and house price expectations, we started to see a gradual recovery in May

Economic forecasts and scenarios seem to be leaning towards a deep but relatively short-lived recession

March
April
May
June
July

As at July 2020, the balance of economic forecasts and scenarios leaned towards a deep recession. A partial recovery is expected in 2021, with annual GDP growth turning positive.

The risk, however, remains on the downside.

Compared to earlier scenarios, assumptions around the virus spread and public-health response have become more pessimistic. A U-shaped recovery is now seen as more likely than a V-shaped recovery.

GLA Economics is developing macroeconomic scenarios for London's economy to inform recovery planning.

The updated OBR scenarios assume a historic recession in the UK this year – although less deep than initially expected - followed by a gradual bounce back in 2021 and 2022

There are signs that the housing market is recovering more slowly in London than in the rest of the country and that Londoners are falling behind with their housing costs

Data from RICS

- RICS report that surveyors expect both prices and sales rates to recover more slowly in London
- The number of sale and rental listings added to property portals has however rebounded strongly after lockdown
- Homelet report that rents for new tenancies in London have fallen by 5.4% over the last three months
- In May, 11% of Londoners said they had fallen behind with their housing costs, compared to 9% across the UK as a whole

The Covid-19 crisis has also had profound impacts on house building and homelessness in the capital

Construction

- BuildUK found that almost 60 per cent of construction suppliers around the country suspended operations due to Covid-19, while many sites that have restarted are running more slowly due to social distancing
- GLA Economics forecasts that London's construction output will fall by 34% in 2020, only recovering to its 2019 level by 2022
- The current Affordable Homes Programme has been extended by a year to give housing providers more time to start the homes they are committed to delivering

Rough sleeping

- In response to the Covid-19 pandemic, the GLA, London boroughs, charities and the Government jointly acted to ensure that the city's rough sleepers were protected from the virus
- Over 5,000 homeless people from winter shelters and from the streets have been given emergency accommodation in the capital, of which around 1,800 so far have been housed in accommodation procured by the GLA, mainly hotels

In contrast to the UK, London's employment and unemployment rates have begun to show the impacts of COVID

Employment rate (% of working age population)

London and UK

London Sampling variability $\pm 1.2\%$

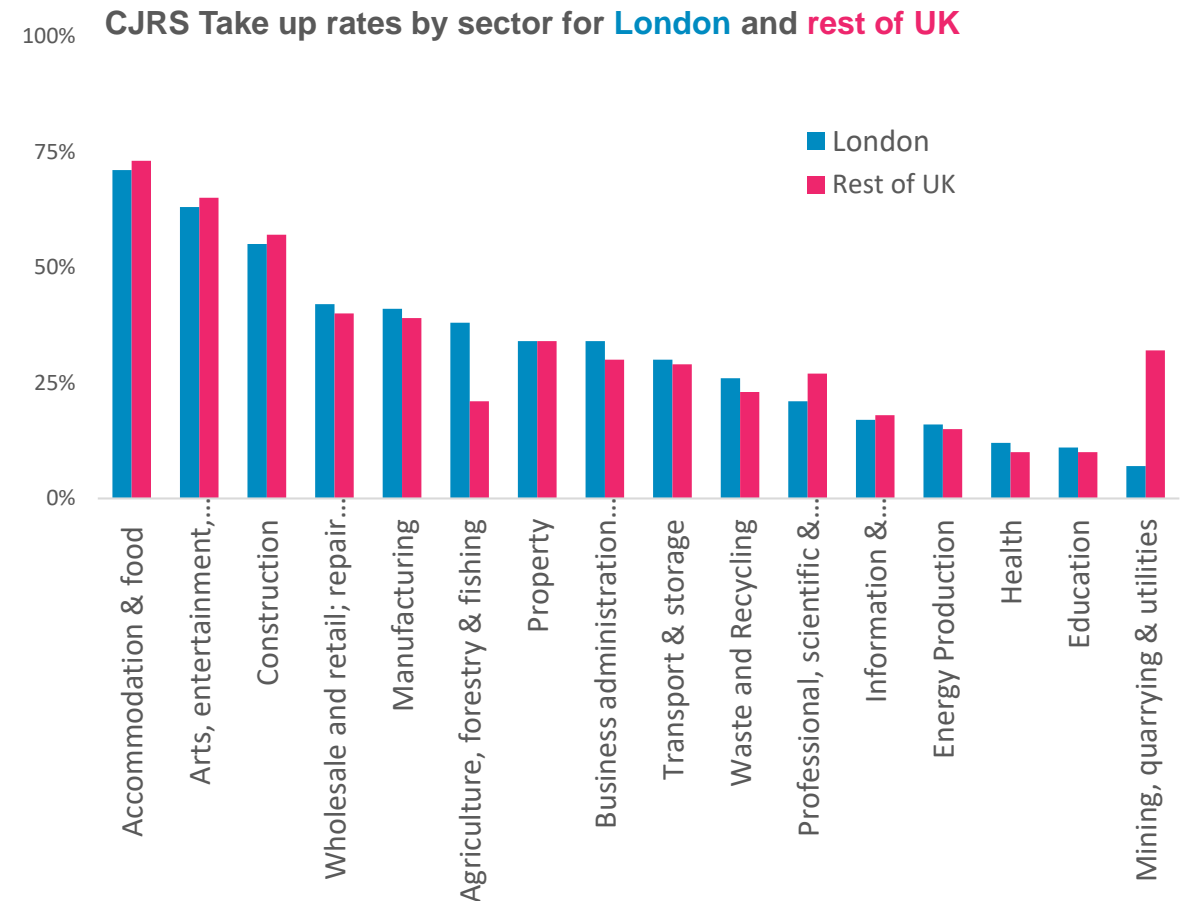

UK Sampling variability $\pm 0.5\%$

- In the three months to May 2020, London's 16-64 employment rate was estimated at 75.7%, down 1.1 pp on the previous quarter - the largest quarterly fall since May-July 2009
- Women accounted for 60% of the quarterly fall in employment (-61,480 for women; -41,750 for men)
- The unemployment rate in the capital was 5.1% in the three months to May 2020. This was 0.6 pp up on the previous quarter and 0.8 pp up on the year. This was the largest quarterly increase since the May-July 2011. The UK unemployment rate was estimated at 3.9%, virtually unchanged compared against the previous quarter
- While unemployment for men went down by 4,130 on the quarter, unemployment for women increased by 31,280

But the risk of unemployment has been largely mitigated by government support schemes

- London had 1.29 million furloughed employments on the Coronavirus Job Retention Scheme (CJRS) to 30th June, accounting for 14% of all UK furloughed employments as London reported the highest number of CJRS claims
- For London, accommodation and food has the highest CJRS take up rate (71%), followed by Arts and entertainment (63%) and Construction (55%)
- There were also a total of 484,000 Londoners on the Self-Employed Income Support Scheme (SEISS) claims in London and 2.5 million for the UK as a whole. Transport and Storage (87%) and Construction (79%) were the sectors with the highest SEISS take up rate for London
- Tottenham, Feltham and Heston and Hayes and Harlington have the highest CJRS take up rates in the capital whilst Harrow East, Ilford North and Hornchurch and Upminster were the constituencies with the highest SEISS take up rates

The number of people claiming Universal Credit in London rose by 50,000 between May and June 2020

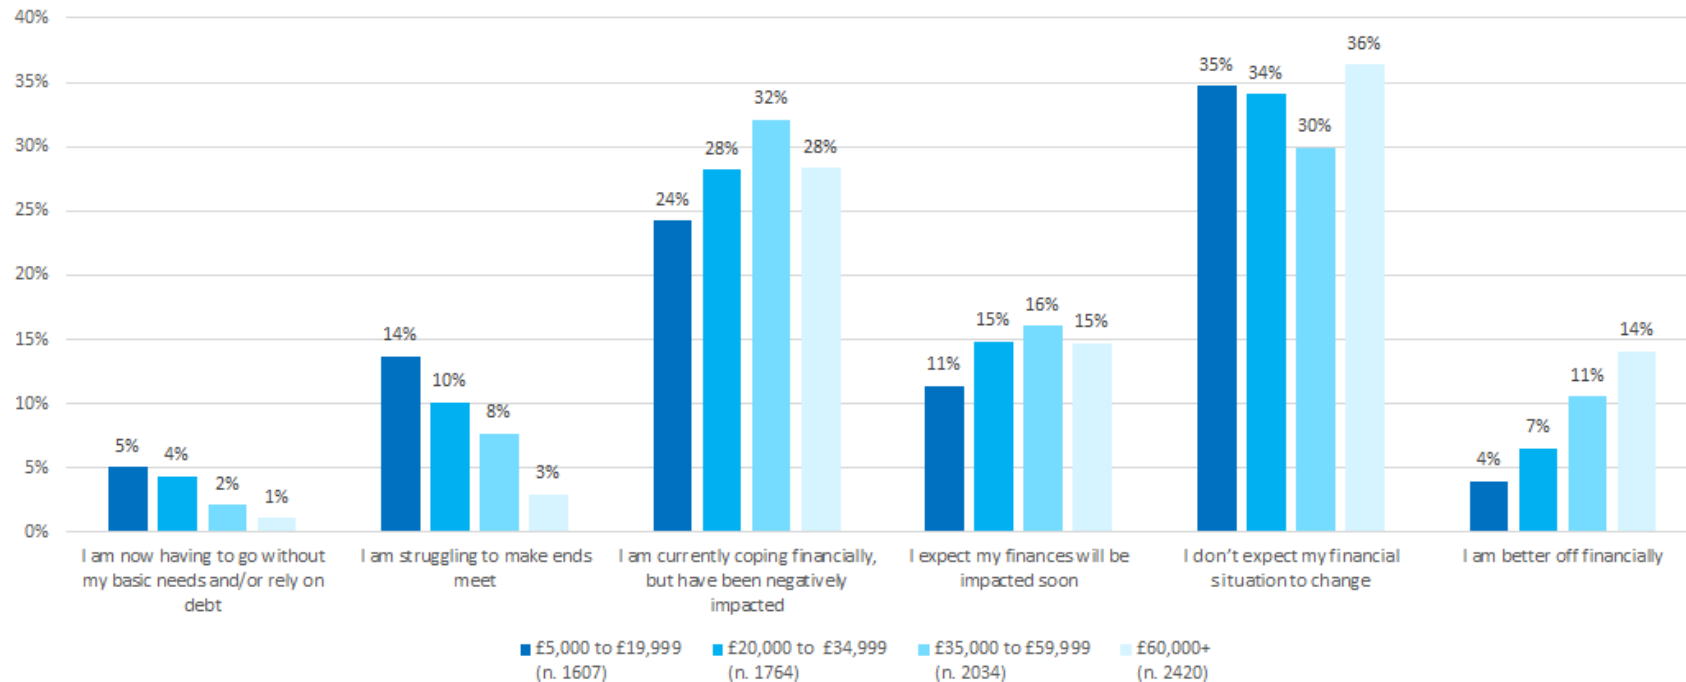

Number of people on Universal Credit, London (000s)

- 870,000 Londoners were claiming Universal Credit in June 2020
- Growth in the number of people claiming Universal Credit has been highest for 20-29 year-olds, tripling from 76,000 to 228,000 between June 2019 and June 2020

Income inequality is widening - the poorest households have experienced the most negative financial impact, whilst the richest households are most likely to be better off

Impact of coronavirus on your financial situation

- 14% of households with a gross income over £60k are better off financially due to coronavirus, compared to 4% of the poorest households
- 19% of households with gross incomes under £20k are now struggling financially, compared to 4% of the richest households
- 39% of all Londoners say their personal finances have been negatively affected, whilst 41% report an improved or unchanged financial situation

The latest data suggests Londoners use of food banks rose between April and May

- **Food bank usage:** Across May, 4 per cent of 16+ Londoners reported using a food bank in the last 4 weeks, an increase from 1 per cent in April
- Eleven per cent of BAME Londoners reported using a foodbank in the last four weeks
- **Nutritious food:** 5 per cent of Londoners report not being able to eat healthy and nutritious food in the last week
- **Hunger:** 5 per cent of Londoners report that they or others in their household were hungry but did not eat in the last week
- **Eating together:** 7 per cent of Londoners who do not live alone report that there were no days where they ate a meal together with others they live with in the last week

Digital exclusion risks increasing the educational ‘attainment gap’ between disadvantaged and other children. In London, children are more likely to need a device to do all of their school work

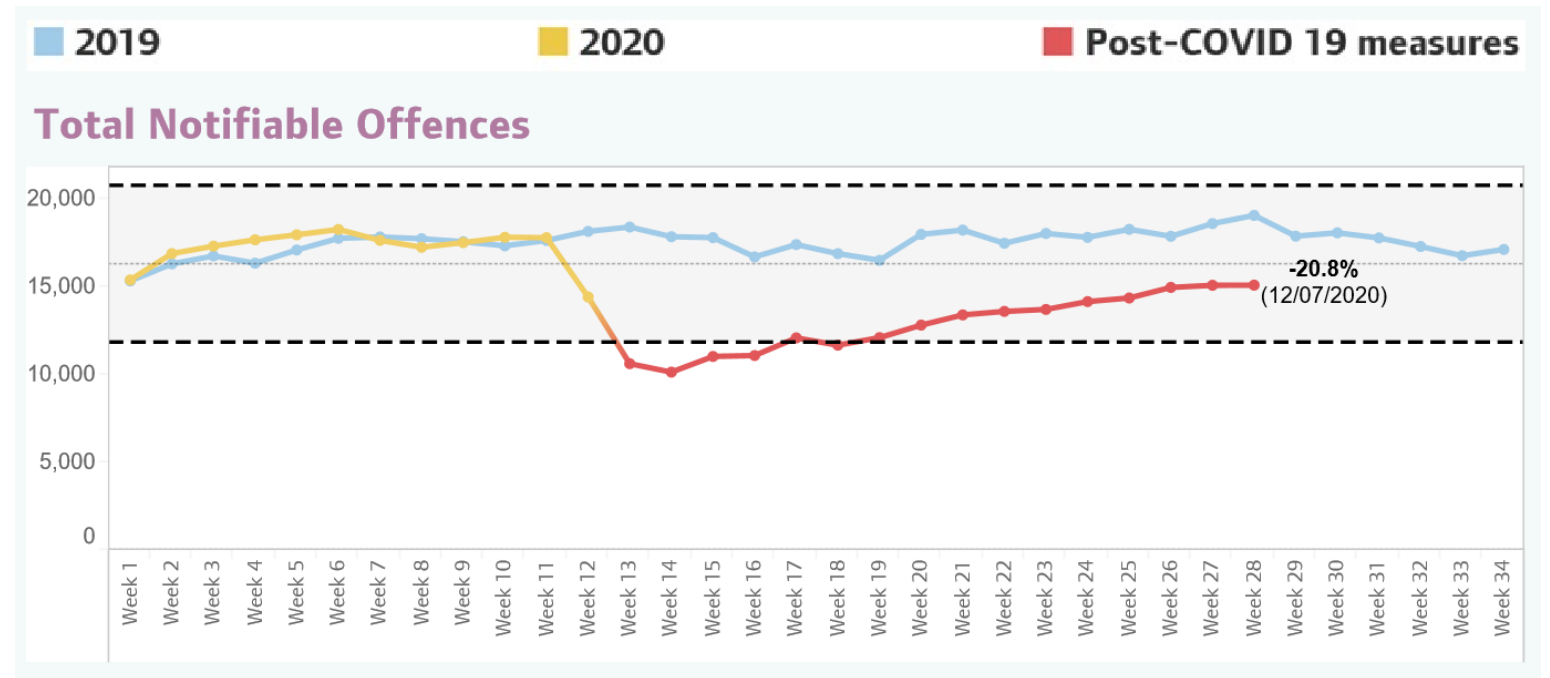

Parents, for how much of the schoolwork does your child need a computer, tablet or laptop?

- Research by the Sutton Trust suggests that pupils in deprived schools are the most likely to have inadequate IT access, and children in the most disadvantaged households are spending the least amount of time on schoolwork each day
- The amount of parental supervision does not vary by social class which suggests that some of the difference in time spent learning each day between disadvantaged children and their peers is due to a lack of resources available to learn with

Overall crime is still 20% lower than last year but has been rising. Domestic abuse remains higher than in 2019

Source: MOPAC

Levels of anxiety have stayed broadly consistent, with 13% identifying as highly anxious but physical exercise has declined since June

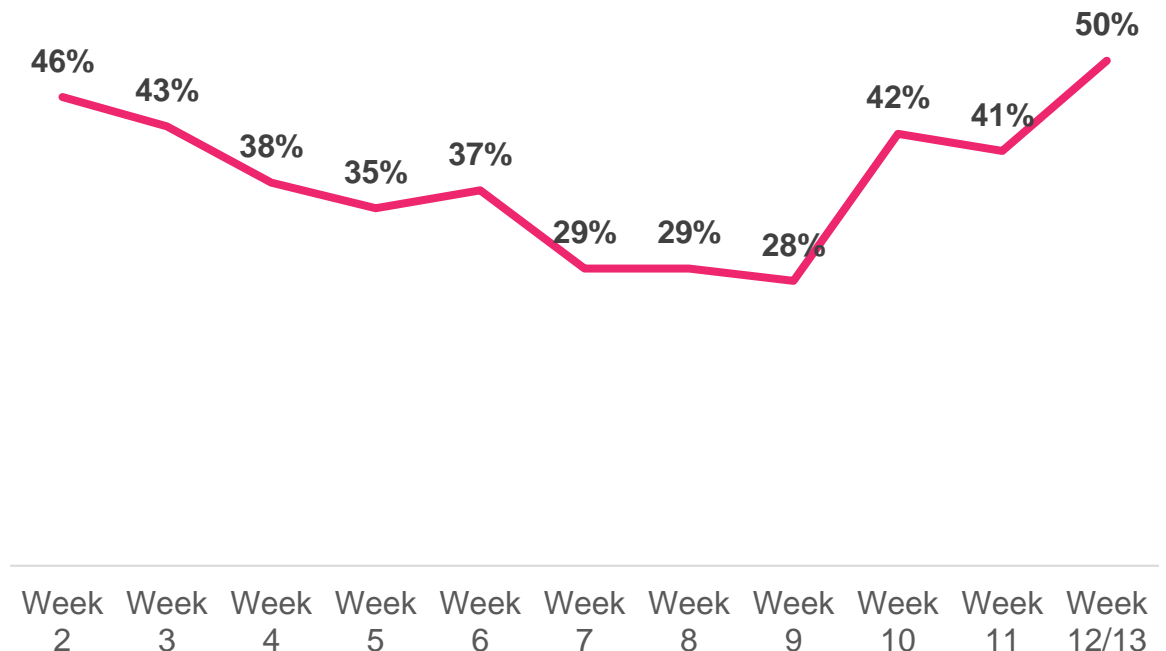

Source: GLA/YouGov surveys, multiple dates. Physical health score is the average number of days per week Londoners did moderate intensity exercise

Civil society organisations have seen spikes in demand and require support to aid wider social recovery

- The proportion of civil society organisations reporting an increase in the number of people seeking support fell throughout April, May and early June, but since mid-June has begun to increase again
- The biggest issues facing civil society organisations' clients include digital exclusion, low income, social isolation, employment issues and mental health
- The biggest issues facing civil society organisations themselves include sustainable funding, capacity constraints due to rising demand and dealing with the gradual easing of lockdown

Proportion of organisations reporting an increase in number of people seeking support (w/c 20th April – w/c 6th July)

Air quality increased noticeably during lockdown and there was a measurable increase in walking and cycling

Air Quality

- Pollutant nitrogen oxide (NO₂) decreased by 30% on average around key transport routes through the city, decrease across London 9-17%
- A GLA/YouGov survey from April 2020 found that 55% of Londoners thought air quality had improved since lockdown began.

Walking/Cycling

- More than 1 million cycles were hired from TfL's cycle hire scheme: the highest in its 10-year history and the highest ever in a weekend on 30-31 May 2020
- Walking has grown steadily in London since the start of the lockdown

Vertical red lines show changes in social distancing rules.
Vertical grey bands show weekends and public holidays

- More than half of Londoners say they will go out and about less after lockdown:
- 61% of Londoners say they'll use public transport less
- 58% / 59% say they'll go to pubs / restaurants less
- 53% say they'll go to cultural venues less

Londoners are increasingly wearing facemasks but opinion is split on the safety benefits

- 62% of Londoners are now wearing a face covering when out and about (end June)
- There has been a steady increase in face covering usage in London, from 36% to 62% since late April. The increase in the last fortnight has been particularly pronounced as it has become mandatory to use on public transport (this was before the announcement regarding shops).
- 20% of Londoners say they are more likely to use public transport now that wearing a face covering will be compulsory, and 47% say that this makes no difference. 16% say making face coverings compulsory makes them less likely to use public transport.
- There remains a split amongst Londoners on the safety benefits of face masks – 50% of Londoners say they would feel safer wearing a face mask, 39% say it would make no difference.
