# 2001 Census: First population statistics - *London Plan Sub Regions*

## Population by age

The 2001 Census population of London is 7,172,036. This compares with the latest mid-year estimate for 2000 of 7,375,065. This is within 3 per cent of the actual figure. Borough population totals are given in Table 1.

*The Office for National Statistics (ONS) have published a range of information on their website, and some of the more interesting facts are:*

Nationally a larger proportion of the population is aged 60+ than under 16 for the first time.

There are more women than men in the UK in all age groups above 21.

There has been a big increase in the number of people aged 85 and over, now over 1.1 million in the UK.

Within London Newham has the largest proportion of babies under 1 year old in the country, closely followed in second and third places by Hackney and Tower Hamlets. Lewisham, Greenwich, Richmond and Kensington and Chelsea were also among the top ten. The same three boroughs topped the national rankings of the proportion of population aged under 5. Newham has the third highest proportion of persons aged under 16 in the UK at 26.2 per cent.

The London rankings for under 5s are shown in Table 2.

## Total resident population

It is not unexpected therefore, that the areas with high percentages of children would have relatively low proportions of people over 60. Newham has the lowest percentage of people aged 60 or over in the UK, followed by Lambeth, Hackney, Tower Hamlets and Haringey. The only area outside London in the 10 local authority areas with the lowest proportions of people over 60 is Milton Keynes.

**Table 3 Lowest proportions in UK for people aged 60+**

1	Newham	12.26
2	Lambeth	12.43
3	Hackney	12.60

## Measures of change

It should be relatively easy to give an indication of population change over the last decade, but because of the doubts ONS have raised about the series of mid-year estimates and about the adjustments made for under-enumeration in the 1991 Census it is not straightforward. ONS originally only published change between 1981 and 2001 on their website, which is not what most users are interested in, although they have now added change between mid-1991 and the 2001 Census.

There are a number of valid comparisons that could be made to measure population change between 1991 and 2001. A straight comparison of the 1991 and 2001 Censuses seems obvious, except that the 2001 Census resident base is now the same as the population base used for the mid-year estimates and differs from the 1991 Census resident base (mainly in the treatment of where students are regarded as usually resident). There have also been boundary changes in London between 1991 and 2001. A second valid comparison could be with the 1991 mid-year estimates, except that there is some doubt about the reliability of the adjustments made for under-counting in the 1991 Census that were incorporated into the 1991 mid-year estimates. ONS now appear to be saying that the adjustments were too high in some areas, and are going to re-issue the mid-year estimates back to 1991 in the near future and then back as far as 1982 in the next few months.

The best measure of change available ought to be obtained by comparing the 2001 Census figures with the revised 1991 mid-year estimates - but this will not lessen the shock of the 2001 Census figures to Westminster, Kensington and Chelsea, Barnet and a number of other boroughs which have seen the official

estimates of their populations reduced dramatically and suddenly.

## Density

The 10 most densely populated local authority districts in the UK are all in Inner London.

**Table 8 Persons per square kilometre**

1	Kensington and Chelsea	13,244
2	Islington	11,719
3	Hammersmith and Fulham	10,328
4	Hackney	10,141
5	Lambeth	9,858
6	Tower Hamlets	9,806
7	Camden	9,001
8	Southwark	8,444
9	Westminster	7,539
10	Wandsworth	7,440

It is unclear at this stage how this has been calculated. The map below uses the more usual measure of persons per hectare. This should not affect the national rankings.

**Population density: number of residents per hectare**

Source: 2001 Census of Population, released 30th September 2002.  
The areas were calculated by MapInfo, the package used to produce these maps.

## Coverage

ONS have published response rates on their website. These are measures of the percentage of people estimated to have been included on a Census form. In England and Wales 94 per cent of people were included on a Census form. Of the remainder 4 per cent were thought to be from identified households and 2 per cent from wholly missed households.

These response rates are lower than we had expected, but there is more information available than anticipated at this stage. More work will be done looking at response rates by age and sex and a further briefing will be produced on this topic.

The figures for London could be regarded as another shock measure - with the lowest response rate being 64 per cent in Kensington and Chelsea. Havering had the highest response rate with 97 per cent of people included on a Census form.

The map below illustrates the different response rates and Table 9 gives the statistics.

**Percentage Response Rate**
