# INTERNAL DAYLIGHT & SUNLIGHT REPORT

Charlton Riverside

5<sup>th</sup> December 2018

A photograph of a modern building's facade, showing a curved structure with a grid of glass panels and horizontal wooden slats. The sky is blue with white clouds. The image is partially obscured by a large, dark grey geometric shape on the right side of the page.

## Contents

1. Introduction
2. Guidance and Policy
3. Application of methodology
4. Sources of Information
5. The Site and Proposal
6. Internal Daylight and  
Sunlight Results
7. Conclusions

# 1. Introduction

- 1.1. This practice has been instructed to provide an assessment of the internal daylight & sunlight amenity with the proposed scheme at Charlton Riverside.
- 1.2. The effects of the Proposed Development to the surrounding residential properties have been assessed within the Environmental Chapter that was submitted separately.
- 1.3. The methodology and criteria used for these assessments is provided by the Building Research Establishments guidance 'Site layout planning for daylight and sunlight: a guide to good practice' (BRE, 2011) and the British Standard document BS8206 Pt2.

# 2. Guidance and Policy

## **Daylight & sunlight for planning**

Site layout planning for daylight and sunlight: a guide to good practice, BRE 2011

- 2.1. This document follows from previous guidance produced by Her Majesty's Stationary Office (HMSO) on daylight and sunlight in the built environment and is now the accepted methodology used by local authorities for assessing daylight and sunlight in relation to new developments. It provides methods for the calculation of daylight and sunlight impacts of development upon existing surrounding properties and within proposed new dwellings.
- 2.2. The guidance details three methods for calculating daylight; the Vertical Sky Component (VSC), the No-Sky Line Contour (NSC) and the Average Daylight Factor (ADF). The first two assessments are primarily used for the assessment of existing buildings, whilst the ADF test is used for the assessment of new buildings. The assessment of sunlight within both existing and new buildings is undertaken using the Annual Probable Sunlight Hours (APSH) test.

### ***Daylight Assessment***

- 2.3. The ADF test calculates the average illuminance within a room as a proportion of the illuminance available to an unobstructed point outdoors, under a sky of known luminance and luminance distribution. This is the most detailed of the daylight calculations and considers the physical nature of the rooms and windows, including; window transmittance, window size, room size, angle of external obstruction and room surface reflectivity.

### ***Sunlight Assessment***

- 2.4. For sunlight the APSH test calculates the percentage of statistically probable hours

of sunlight received by each window in both the summer and winter months. March 21st through to September 21st is considered to be the summer period while September 21st to March 21st is considered the winter period.

- 2.5. The guidelines suggest that windows should receive at least 25% total APSH with 5% of this total being enjoyed in the winter months.

#### ***Planning Context***

- 2.6. It is important to note that, within urban centres, achieving good levels of daylight and sunlight in accordance with the BRE guidelines can be weighed in the balance against other beneficial design factors.
- 2.7. The opening paragraphs of the BRE guidelines state: -

*“The guide is intended for building designers and their clients, consultants and planning officials. The advice given here is not mandatory and the document should not be seen as an instrument of planning policy. Its aim is to help rather than constrain the designer. Although it gives numerical guidelines, these should be interpreted flexibly because natural lighting is only one of many factors in site layout design. In special circumstances the developer or planning authority may wish to use different target values. For example, in a historic city centre a higher degree of obstruction may be unavoidable if new developments are to match the height and proportions of existing buildings”.*

- 2.8. The targets set out in the BRE document are ‘guidelines’ and they should be applied sensibly and flexibly based on the site-specific context of development.

#### **BS 8206 Lighting for buildings - Part 2: Code of Practice for daylighting, BSI 2008**

- 2.9. This document gives guidance upon the design and provision of good daylight and sunlight within new developments. It suggests that the ADF test should be used to assess daylight and APSH to assess internal sunlight. The methodologies for these assessments are the same as those discussed in the BRE guidance above.

#### **National Planning Policy Framework, 2018**

- 2.10. In regard to Daylight and Sunlight the paragraph 123 of the National Planning Policy Framework (NPPF) states:

*“Where there is an existing or anticipated shortage of land for meeting identified housing needs, it is especially important that planning policies and decisions avoid homes being built at low densities, and ensure that developments make optimal use of the potential of each site. In these circumstances:*

*C) Local planning authorities should refuse applications which they consider fail to make efficient use of land, taking into account the policies in this Framework. In this context, when considering applications for housing, authorities should take a flexible approach in applying policies or guidance relating to daylight and sunlight,*

*where they would otherwise inhibit making efficient use of a site..."*

## **Housing - Supplementary Planning Guidance (March 2016) - London Plan 2016**

2.11. The Housing SPG of the London Plan also provides the following:

*"Policy 7.6Bd requires new development to avoid causing 'unacceptable harm' to the amenity of surrounding land and buildings, particularly in relation to privacy and overshadowing and where tall buildings are proposed. An appropriate degree of flexibility needs to be applied when using BRE guidelines to assess the daylight and sunlight impacts of new development on surrounding properties, as well as within new developments themselves. Guidelines should be applied sensitively to higher density development, especially in opportunity areas, town centres, large sites and accessible locations, where BRE advice suggests considering the use of alternative targets. This should take into account local circumstances; the need to optimise housing capacity; and scope for the character and form of an area to change over time.*

*The degree of harm on adjacent properties and the daylight targets within a proposed scheme should be assessed drawing on broadly comparable residential typologies within the area and of a similar nature across London. Decision makers should recognise that fully optimising housing potential on large sites may necessitate standards which depart from those presently experienced but which still achieve satisfactory levels of residential amenity and avoid unacceptable harm."*

## 3. Assumptions and Parameters

- 3.1. Measured Survey (point cloud data), architects drawings, site photographs and Ordnance Survey information have been used to create a 3D computer model of the proposed development in the context of the existing site and surrounding buildings.
- 3.2. The reflectance and window transmittance used in the assessments are:

Internal reflectance of rooms	Based on light floors, light walls and white ceilings: <ul style="list-style-type: none"> <li>- Internal floors: 0.4</li> <li>- Internal walls: 0.81</li> <li>- Internal ceilings: 0.85</li> <li>- Surrounds: 0.2</li> </ul>
Window transmittance	Double glazed = 0.68

- 3.3. The guidance suggests that, for new dwellings provided with electric lighting, kitchens should attain at least 2% ADF, living and dining rooms at least 1.5% ADF and bedrooms at least 1% ADF.
- 3.4. The BRE guidelines provides that non-daylit internal kitchens should be avoided where possible, however where this is inevitable, they should be directly linked to a well daylight living room. The proposal includes a number of living/kitchen/dining rooms (L/K/D's) and studio spaces with the kitchen situated towards the rear of the room. The daylight potential to kitchen spaces would be lower and artificially lit with task lighting. As such, these kitchen spaces have been excluded from the assessment, and the living room target of 1.5% has been applied to the living / dining part of the room.

## 4. Sources of Information

- 4.1. Full list of sources of information can be found at Appendix 1.

## 5. The Site and Proposal

- 5.1. The existing site is predominantly occupied by industrial warehouse and business park units. The nearby surrounding area is also characterised by existing warehouse units and retail outlets, with the exception of low rise residential properties to the west of the site.
- 5.2. With little external obstruction, there will be excellent daylight potential on the outward facing facades of these buildings. Through an iterative daylight design process, eb7 have worked with the architects to maximise daylight across the scheme. This has involved enlarging windows, moving balconies and optimising internal layouts. These parameters have been balanced with providing the occupants with privacy and sufficient external amenity space. The results is a scheme with an excellent level of compliance with regard to internal daylight.
- 5.3. The proposal is for the demolition of the existing buildings on site and the development of a residential led mixed use scheme.

## 6. Internal Daylight and Sunlight Results

- 6.1. Full results of the daylight and sunlight assessment are attached within Appendix 3. Drawings showing the layouts of the proposed accommodation with window and room labels are attached within Appendix 2.
- 6.2. In relation to internal daylight and sunlight, the relevant assessments are internal Average Daylight Factor (ADF) and Annual Probable Sunlight Hours (APSH)

respectively.

- 6.3. **Tables 1 and 2**, below, summarise the daylight and sunlight results within the proposed residential units (detailed results are presented in Appendix 3). Drawings showing the internal layouts of the proposed dwellings along with room and window labels are shown in Appendix 2.

**Table 1: Completed Development – Daylight within the Proposed Development (ADF)**

<b>Building Reference</b>	<b>Total number of rooms relevant for daylight assessment</b>	<b>Total number of rooms which meet the ADF criteria</b>
Block A	185	183
Block B	234	217
Block C	201	198
Block D	152	142
Block EF	336	306
Block G	38	37
Block H	152	131
Block J	68	68
Block KL	317	292
Block MN	273	267
Block O	144	134
<b>Total</b>	<b>2100</b>	<b>1975</b>

- 6.4. The results of the technical analysis have shown that 1975 (c.94%) of the 2100 habitable rooms relevant for assessment show compliance by reference to the ADF methodology suggested within the BRE guidance which is considered excellent for an urban regeneration scheme such as this where it is important to achieve the density set out in the Housing SPG of the London Plan and the NPPF.
- 6.5. Although minimised as far as possible, as would be expected for a development of this scale there are a small number of inward facing rooms which fall below the targets set within the BRE guidance.
- 6.6. Of the rooms that do not meet the suggested targets, there are a large number of rooms which show ADF levels marginally below the suggested targets. The results show there are 25 living rooms, 5 LKD's / studios and 30 bedrooms achieve ADF

levels within 0.3% ADF of their target. Whilst these rooms indicate levels below the suggested targets, given the marginal nature of the deviations the results should be considered acceptable in line with the intentions of the BRE criteria for an urban regeneration scheme such as this.

- 6.7. Of the remaining rooms, 43 are situated beneath or partially restricted by balconies or loggias. These balconies / loggias provide private external amenity and in some cases privacy to the occupier, however can serve to limit the daylight potential to the rooms set beneath or behind. Generally this trade off of daylight for private external amenity space is considered acceptable for occupants in isolated instances for a scheme such as this. The BRE guidelines allow a degree of flexibility when applying the targets where other factors are to be considered. Given the isolated nature of the deviations, coupled with the benefits of the private external amenity areas, the results should be considered in line with the overall intentions of the BRE guidelines.
- 6.8. In addition, the results show 10 rooms within Block O include winter gardens where internal sliding doors separate the room from the "external space". As the internal window is recessed behind this space, the ADF results fall below the suggested targets. We have therefore undertaken a further assessment as if sliding doors are open and whole area will be treated as one space, with the assessment point being taken at the external façade. The results of this additional analysis for these rooms are attached at Appendix 3. The results indicate full compliance with the BRE targets, confirming high levels of daylight within the whole space. Considering this, coupled with the amenity that a winter garden space provides, the daylight to these rooms is in line with the intentions of the BRE guidelines.
- 6.9. The 9 remaining rooms are main living rooms situated at ground floor level within Blocks B and EF. These rooms are within duplexes and have been situated at ground floor to allow direct access to the private outdoor space, with the bedrooms serving units being situated on the floor above. The building steps out at first floor level meaning the windows serving these rooms are overhung by the upper levels of the building. The effect of overhang, coupled with the ground floor location causes these windows to experience lower daylight potential. Given the small number of rooms experiencing deviations from the suggested targets, together with benefit of being directly linked to the outdoor space from the main living accommodation, the effects should be considered in line with the overall intentions of the BRE targets within the context of the scheme as a whole.
- 6.10. The remaining rooms are 2 secondary bedrooms situated on the first floor of Block B (identifiable as room R11) and Block H (identifiable as room R1). These bedrooms are situated in constrained corner / flank elevation locations and are therefore constrained in outlook. Whilst these rooms indicate deviation, as the primary bedrooms and living room within the dwelling achieve full compliance, the result should be considered isolated.

6.11. The remaining room is a living room situated on the second floor of Block G and identified as R7. This living room indicates ADF levels of 1.1% which is just below the suggested targets. Again, whilst this room indicates levels below the suggested targets, given the minor and isolated nature of the deviation, the result are considered in line with the overall intentions of the BRE criteria.

**Table 2: Completed Development – Sunlight within the Proposed Development (APSH) – south facing studio / living room and living / kitchen / dining rooms only**

<b>Building Reference</b>	<b>Total number of rooms assessed</b>	<b>Total number of rooms which meet the APSH criteria</b>
Plot A (Blocks A-H)	247	174
Plot B (Blocks J-O)	192	86
<b>Total</b>	<b>439</b>	<b>260</b>

- 6.12. Of the 439 south facing studios, living and dining rooms in the proposed development, 260 (c.59%) show compliance by reference to the APSH methodology suggested within the BRE guidance. This level of compliance would be expected in a scheme such as this.
- 6.13. The design incorporates north to south blocks, primarily served by windows on the east and west facades. The potential for good sunlight to east or west facing windows is lower than that for directly south facing windows, but the number of north facing units, which would see little or no direct sunlight is reduced. This design provides some direct sunlight to the vast majority of units rather than good sunlight to some, with others receiving none at all. Furthermore, a number of rooms achieve good total APSH levels, with deviations in the winter sun levels. These results are wholly expected and typical for such a development due to the sun’s arc angle being lower during the winter months.
- 6.14. Finally, a number of main living spaces benefit from the use and enjoyment of balconies, loggias or winter gardens which provide private external amenity space. As mentioned in paragraph 6.7-6.8 above, these amenity spaces do limit the amount of sunlight available to the rooms beneath.
- 6.15. Whilst there are rooms which indicate deviations from the suggested targets for sunlight, when considering other factors such as the orientation of the scheme, self-limiting constraints such a balconies which provide external amenity and the excellent rate of internal daylight compliance, the results should be considered in line with the overall intentions of the BRE criteria and typical for a scheme of this type where density is required.

## 7. Conclusions

- 7.1. The quality of daylight amenity within the proposed accommodation has been assessed using the ADF assessment as recommended within the BRE document 'Site layout planning' and the British Standard document BS8206 pt2.
- 7.2. Daylight design has been a key consideration in the design of this scheme. eb7 have worked alongside the design team to ensure daylight levels are maximised where possible. This has led to a material improvement in internal daylight levels to those previously assessed. The results of the daylight analysis have shown that the provision of daylight within the proposal is excellent for an urban regeneration scheme, with 94% of habitable rooms exceeding the BRE targets.
- 7.3. As would be expected for a scheme of this size, the results of the APSH sunlight assessment have shown that in some instances direct sunlight to the window face will be limited. The design of the buildings is generally north to south blocks with primary facades facing east or west. Whilst east or west facing units have a lower sunlight potential than those that are directly south facing units, this ensures that the majority of units see some direct sunlight as the number of directly north facing units is reduced. This coupled with the trade-off for private external amenity space provided in the form of balconies would be considered acceptable.
- 7.4. In view of the fact that the targets in the BRE guide are not mandatory and are guidelines only, we feel that the provision of daylight and sunlight within the proposed units is in accordance with the intentions of the BRE guidance and therefore local planning policy.
