Introduction

This document sets out key performance information for five years to 2020/21 to support the Statement of Assurance (SoA) for 2020/21.

Fifth London Safety Plan (LSP5)

Prior to the five year period covered by this document (in January 2014), changes were made to the number of fire stations and fire engines as part of the implementation of the Fifth London Safety Plan[1] (LSP5). The LSP5 was approved by the former London Fire and Emergency Planning Authority (LFEPA) on 12 September 2013, following a Mayoral Direction. It originally covered a three-year period from April 2013 to March 2017 (2013/14 to 2016/17) but was extended for one year (2017/18). The major changes set out in the LSP5 were implemented on 9 January 2014 as follows:

- The closure of 10 fire stations.
- The number of fire engines (pumping appliances) reduced by 14 (net).
- Five appliances were redeployed to different stations.
- The number of fire rescue units (specialist rescue vehicles) reduced from 16 to14.
- The minimum crewing levels on fire rescue units reduced from five firefighters to four.

Other changes at stations were introduced (before 9 January 2014) including:

- Alternate crewing introduced on the scientific support units at Poplar and Hammersmith.
- Alternate crewing introduced on the two remaining incident response units at Wimbledon and Plaistow
- On-demand mobilising for hose-laying and bulk foam units at the incident support centres.

In addition to these LSP5 changes, 13 further fire engines were permanently removed from stations in June 2016. These fire engines had been temporarily removed from stations in August 2013 to provide a contingency resource – the Emergency Fire Crew Capability (EFCC) – in the event of strike action.

Current London Safety Plan

The current London Safety Plan 2017 was approved in March 2016 and covers a four-year period from April 2017 to March 2021 (2017/18 to 2020/21). It is available on the LFB website here.

Impacts on performance in the period since LSP5 to 2020/21

Performance in 2018/19 is impacted by a range of changes alongside those in LSP5 which includes

- the initial temporary removal and ultimate permanent removal of EFCC appliances from stations; and
- station/appliance temporary changes as a result of the PFI station rebuilding programme (between April 2014 to June 2016).

In considering some of the numbers in this document, it is important to recognise the changes to fire stations and fire engines in earlier performance years (April to March), as follows:

- **in 2014/15** – the performance year with LSP5 changes fully implemented, but still with 13 EFCC appliances temporarily removed and station temporary closures arising from the station rebuilding (PFI) project.
- **in 2015/16** – the performance year with LSP5 changes fully implemented, 13 EFCC appliances temporarily removed from stations, and temporary station closures arising from the PFI station rebuilding programme. In November 2015, a new mobilising system was live, which introduced (a) mobilising to individual addresses (rather to a

[1] The London Safety Plan is the LFC's Integrated Risk Management Plan.

street); and (b) geographic mobilising which used a fire engine location to determine which was closest to be mobilised to an incident.

- **in 2016/17** – the performance with LSP5 changes fully implemented, 13 EFCC appliances temporarily removed from stations from April 2016 and permanently removed from June 2016, and there were a few temporary station closures arising from the PFI station rebuilding programme in April, May and June 2016.
- **in 2017/18** – there were no changes to fire stations or fire appliances this year.
- **in 2018/19 –** there were no changes to fire stations or fire appliances this year.
- **In 2019/20 –** the SoA year. There were no changes to fire stations or fire appliances this year.
- **In 2020/21 –** the SoA year. There were no changes to fire stations or fire appliances this year.

Performance reporting

The data in this document is not focussed on performance against indicators/targets but provides a trend analysis for the various data sets presented.

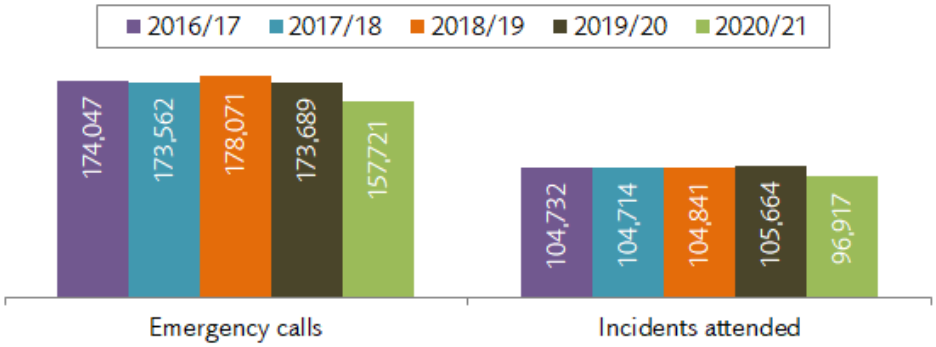
The Brigade publishes a quarterly performance report (for end June, September, December and March) usually within about six weeks of the end of the relevant quarter. These quarterly reports can be found on the Brigade's web site (here – search for *performance*) and also on the London Datastore; for 2020/21 here, and for the current year (2021/22) here.

The data published in this document for 2020/21 is consistent with the end of year *Our Performance* report (available on the London Datastore here).

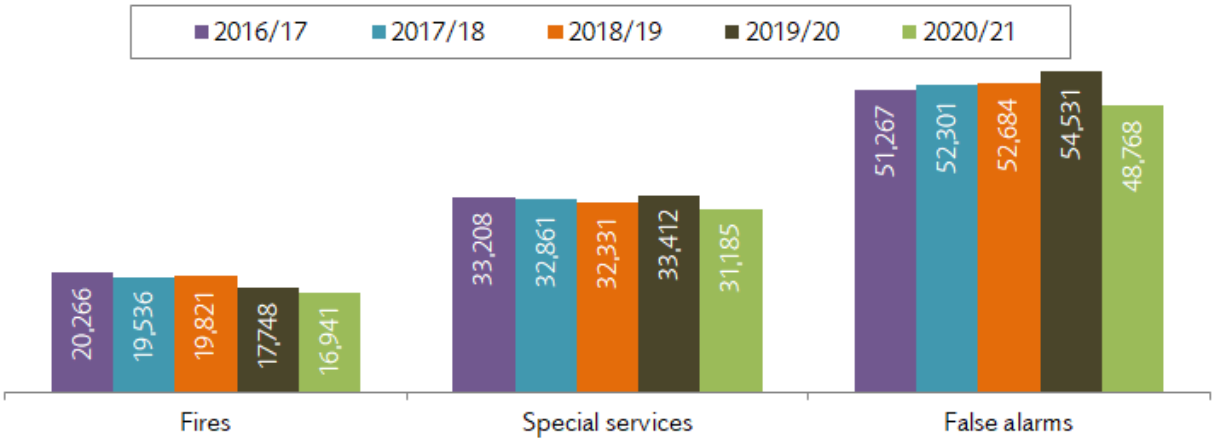
Emergency calls received and incidents attended

- The numbers of emergency (999) calls received and the incidents attended over the five years to 2020/21 are set out in the chart below. Data for incidents attended is available in annex 1C (borough) and 2B (ward). Emergency call data is not available at ward or borough level as the location of a caller is not captured.

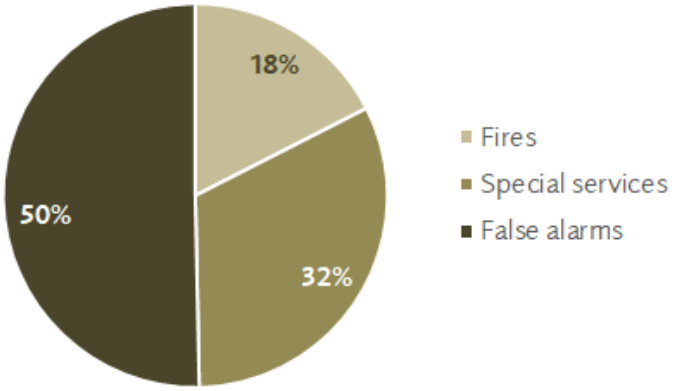
- London-wide, the number of **incidents attended** by the Brigade in 2020/21 was eight per cent lower than in the previous year and was six per cent lower than the five-year average. The number of **emergency calls received** had been gradually increasing up to 2018/19, but in 2020/21 it decreased by eight per cent compared to the five-year average.



- The total number of **fires** attended was some 10 per cent lower in 2020/21 compared to five years earlier, and remains below 20,000 annually. The number of **special services** attended in 2020/21 was seven per cent lower than the previous year, the number is four per cent lower than the five-year period. **False alarms** show a year-on-year upward trend up until 2020/21 where it decreased by 11 per cent, and was down by six per cent across the five years.



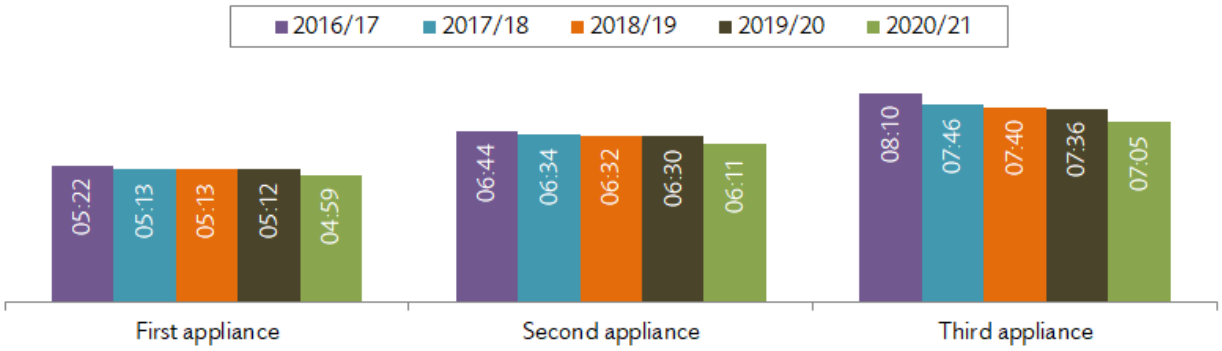
- In 2020/21, the proportions of different types of incident is shown in the chart below. False alarms now represent some 50 per cent of all incidents attended, with special services at 32 per cent and fires at 18 per cent.



Attendance times

First, second and third pumping appliances

- The London-wide attendance time performance[2] for first, second and third pumping appliances (fire engines) is summarised in the chart below. London-wide and borough attendance times for five years are set out in annex 1A (borough) and Annex 2A (ward). Attendance times are measured from the time the appliance is mobilised to arrival of the appliance at the incident address, although the Brigade does publish the full incident response time (from the time the 999 call is answered to arrival of the appliance at the incident scene – see below). The Brigade's attendance standards are for performance London-wide, and whilst it aims to meet its attendance standard at borough level but does not undertake to meet the standards at any smaller geography (e.g. at ward level). We also measure the total time from answering a 999 call to arrival of fire engines at the incident (the 'incident response time'), this is set out below, and in annex 1A and 2A.



- Average speed of arrival for a **first appliance** at an incident in 2020/21, at 4m:59s, it was the fastest time over the last five years, 23 seconds faster than in 2016/17. In 2020/21, none of the boroughs fell outside of the six minute average target for first appliance.

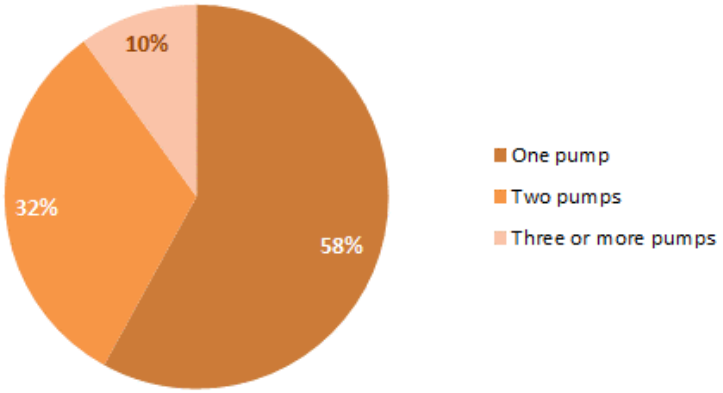
- London-wide, **second appliance** average response time to incidents in 2020/21, at 6m:11s, was 33 seconds faster than in 2016/17. In 2020/21, no borough was outside the second appliance average attendance target of eight minutes.

- London-wide, the average **third appliance** response time in 2020/21, at 7m:05s, was 55 seconds faster than in 2016/17, and the fastest time out of the five years shown. There is no target for third appliance speed of arrival, but performance is well within the benchmark average of 10 minutes used during LSP5 consultation. No borough in 2020/21 fell outside this 10 minute benchmark.

[2] See the 'Notes on data;' on page 23.

- In considering attendance time performance, it should be noted that 58 per cent of all incidents were attended by only one appliance; 32 per cent of incidents received two appliances, with just 10 per cent receiving three or more appliances. The data underpinning third appliance attendance time performance is, therefore, more limited than that for the first or second appliance.

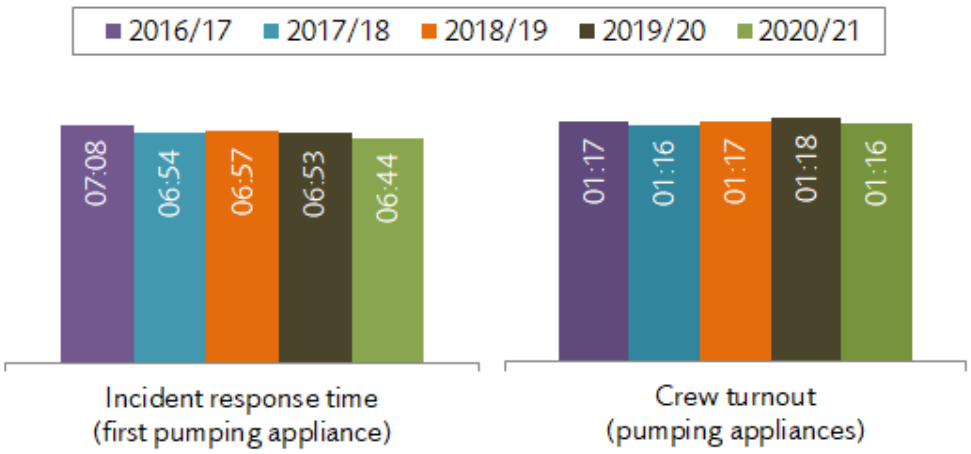
Pumps attending incidents in 2020/21



Overall pumping appliance 'incident' response time and crew turn-out time

- The overall **incident response time** (from time of call to arrival of first appliance) in 2020/21, at 6m:44s, was 24 seconds faster than five years earlier (2016/17). The London-wide performance is shown in the chart below. As the incident response time covers call handling, the equivalent performance target (for a first appliance) would be an average 7m:40s (1m:40s call handling plus six-minute attendance). Only Hillingdon borough had an incident response time outside this notional target at 7m:44s. Details of the overall **incident response time** between answering the 999-call answer and arrival of the first pumping appliance at incident scene are published for in annexes 1A (borough) and 2A (ward).

- **Crew turn-out** performance, at 1m:16s, was slightly faster than in previous years. The crew turn-out time is part of the first, second and third appliance response times (which are measured from the time of mobilisation to arrival at the incident address). Data on pumping appliance crew turnout performance is available by borough in annex 1A; as this data is for station watch performance, it is not available at ward level.



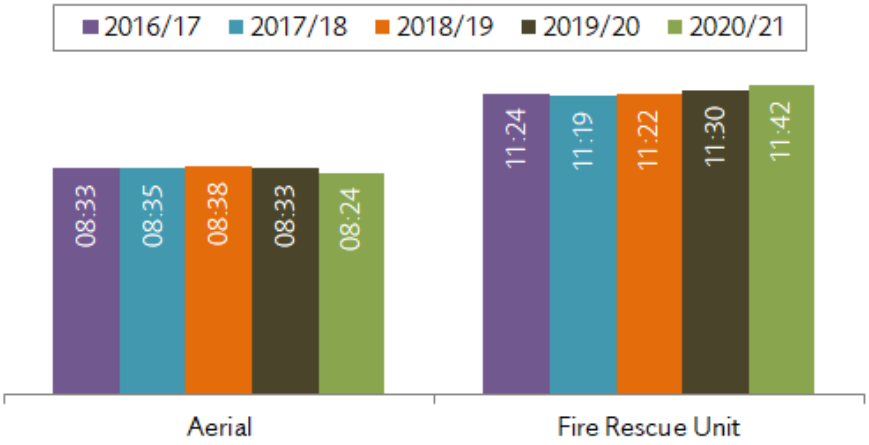
Note: crew turnout time not to same scale.

Special appliances

- Data for special appliance average response times – for fire rescue units (FRUs) and aerial appliances – is shown in the chart below for five years up to 2020/21. Data for borough and ward performance is shown in annex 1B and annex 2A respectively.

- London-wide, average **aerial appliance** response times were 8m:24s in 2020/21. This is time is some 9 second faster than the year before (8m:33s). There is no attendance standard for aerial appliances. There were no changes made to the number or deployment of aerial appliances in LSP5 or over the five years for which data is displayed. Performance is relatively consistent over the five years.

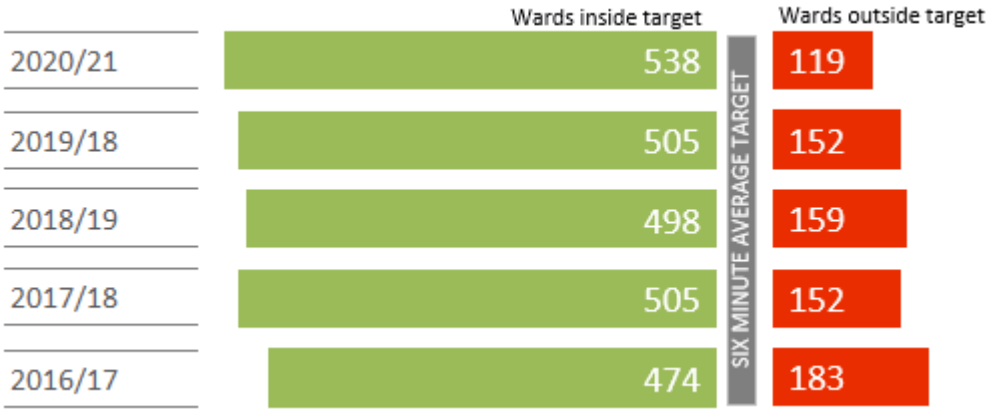
- London-wide, average **fire rescue unit** response times were 11m:42s in 2020/21, this is slower than the year before, and 15 seconds slower than the five year average. The LSP5 reduced the number of Fire Rescue Units from 16 to 14 (i.e. two fewer). There is no attendance standard for fire rescue units.



Ward pumping appliance attendance times

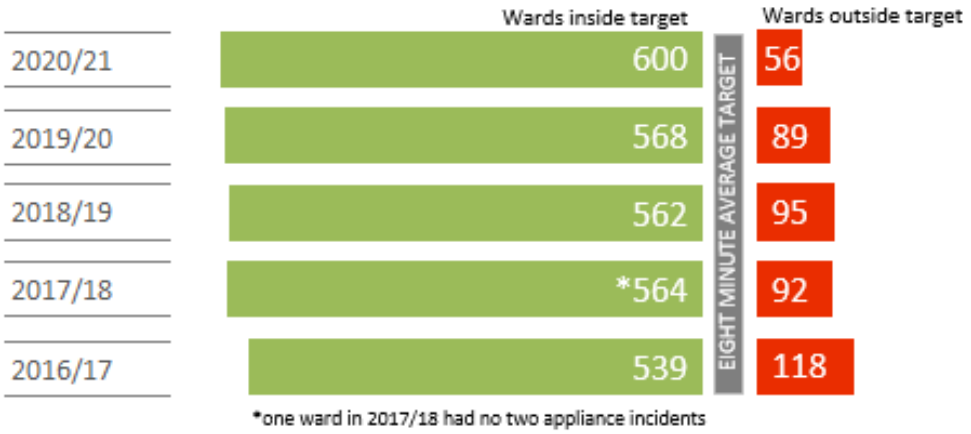
- Ward data for first and second pumping appliance attendance times is in annex 2A. The Brigade does not undertake to meet its attendance standard at ward level.

- 82 per cent of wards in 2020/21 had a **first appliance** within the average six-minute target (it was 77 per cent in the previous year, 2019/20). Comparing performance in 2020/21 with 2016/17, there were 64 fewer wards outside target in the most recent year (2020/21).



- Performance for **first appliance** comparing 2020/21 with 2016/17 shows fewer wards outside the target. Of the 119 wards outside the first appliance average six-minute target in 2019/20, 31 wards were within 30 seconds or less of the target with 26 wards more than 30 seconds outside the target. The chart below shows wards outside the target within four time bands to show how far they were away from the target, together with the cumulative number of wards at each time band.

- Performance for second appliance comparing 2020/21 against 2016/17 shows fewer wards outside the target in the most recent year, compared to five years earlier and 91 per cent of wards were within the average eight minute second appliance target.

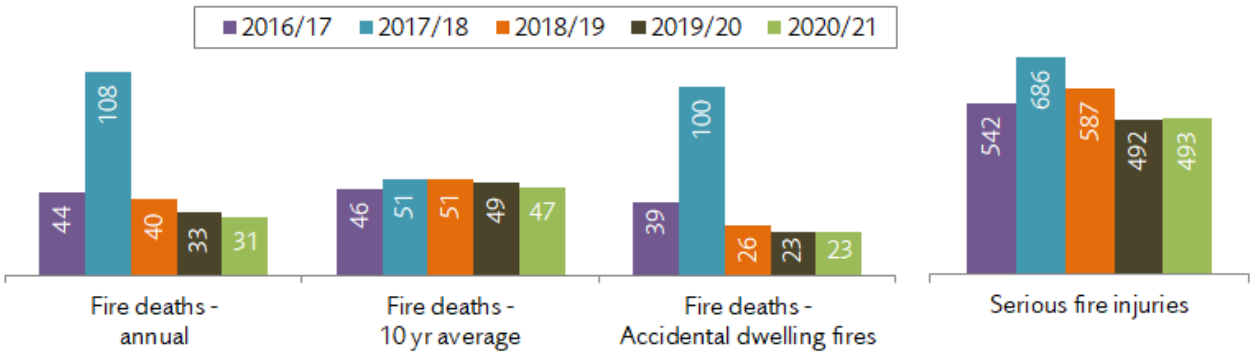


- Of the 56 wards outside the second appliance average eight minute target in 2020/21, 63 wards were within 30 seconds of the target, and 26 wards more than 30 seconds outside the target. The chart below shows wards outside the target within four time bands, to show how far they were away from the target, together with the cumulative number of wards at each time band.

Fire casualties (fatal and non-fatal)

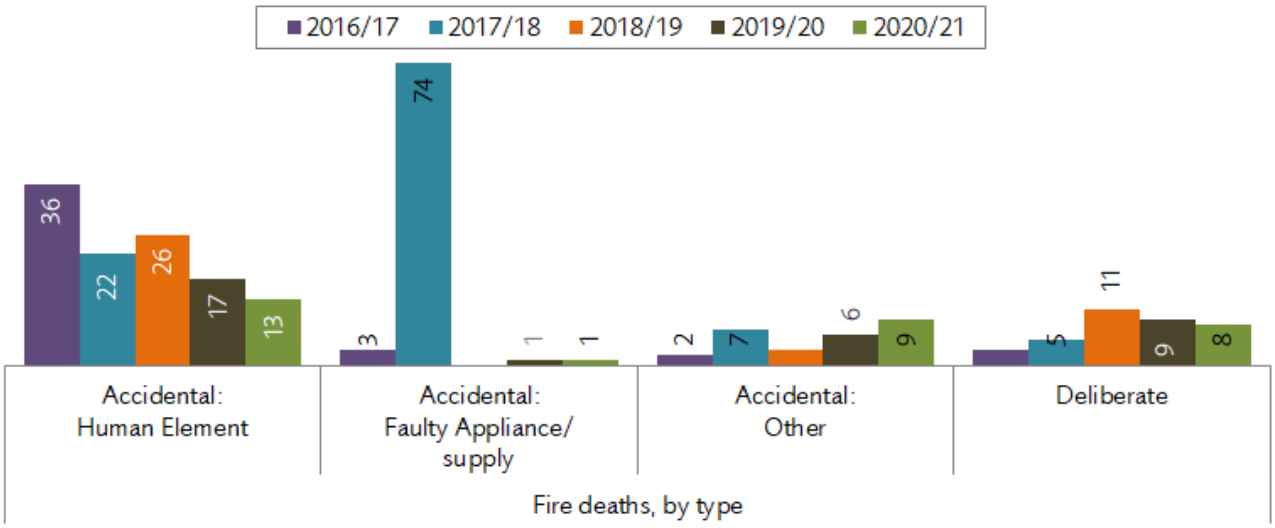
- Data about fire casualties is available in annexes 1D (borough) and 2B (ward) respectively. The number of fire deaths at borough and ward level is generally very small, so there are always limitations on the statistical conclusions that can reliably be drawn from these datasets.

- The chart below shows the numbers of fire casualties (fatal and non-fatal) for the five years to 2020/21. There was an upturn in all casualties in 2017/18 as a result of the Grenfell Tower fire. The 10-year average for all fire deaths is also impacted by the number of fatalities from the Grenfell Tower fire.



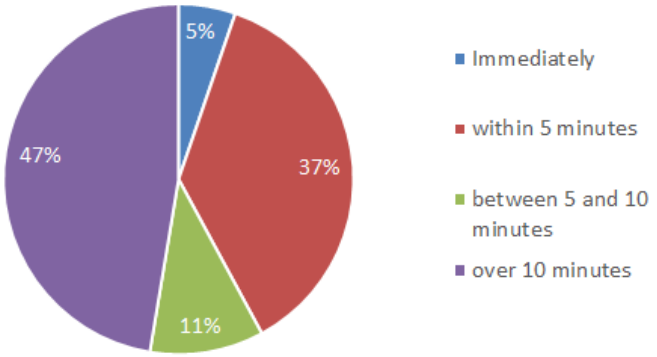
Note: serious fire injuries not to same scale.

- There are different **types of fire death**. Some are result of deliberate acts (which will include deliberate fire-setting (arson), suicide, or homicide), and some are accidental. Of the accidental fire deaths, the cause of the fire can be the result of faulty equipment or supply or have a human cause (e.g. careless disposal of a cigarette, clothing too close to a heat source). The fire deaths due to a human cause – and where the Brigade's community safety activity has most impact – were lower in 2020/21 than any other year shown. The 74 fire deaths in 2017/18 due to fires of "faulty appliance/supply" include the deaths at the Grenfell Tower fire.



Note: The 'Accidental: other' category includes fire deaths where the cause was not known or is still under investigation.
The bar showing the 74 deaths in 20/18 due to 'Accidental: faulty appliance/supply' has been truncated.

- One factor that is key to whether a person is injured or dies in a fire, is the **delay in discovering the fire and calling the fire brigade**. The chart below shows the estimated delay between ignition of the fire and calling the brigade, based on the work of crews and fire investigators. The five-year average to 2020/21 shows that 58 per cent of cases there was a delay of five minutes or more in calling the Brigade (data is not available for 20 per cent of fatalities).

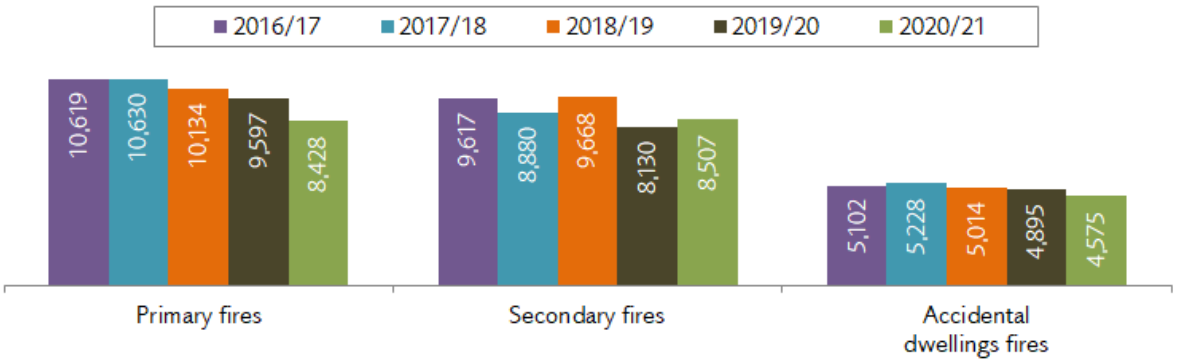


Note: Typically, across the five years displayed, this data is not available for about 20 per cent of fire deaths.

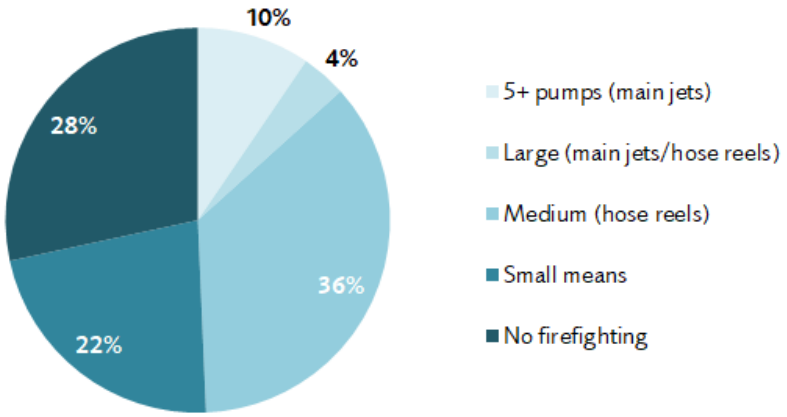
Fires

- Borough and ward data for all fires, primary (more serious) fires, accidental dwellings fires, and fires in care homes/sheltered housing, are in annexes 1C and 2B respectively.

- London-wide, the number of **primary fires,** which includes **accidental dwelling fires,** continued to fall in 2020/21. The number of **secondary fires** slightly increased in 2020/21, but it still lower compared to the previous five years; the numbers tend to fluctuate as open land and grass fires in summer months are a significant proportion of these fires and are higher in years which have warmer/drier summer periods (like 2016/17 and 2018/19).



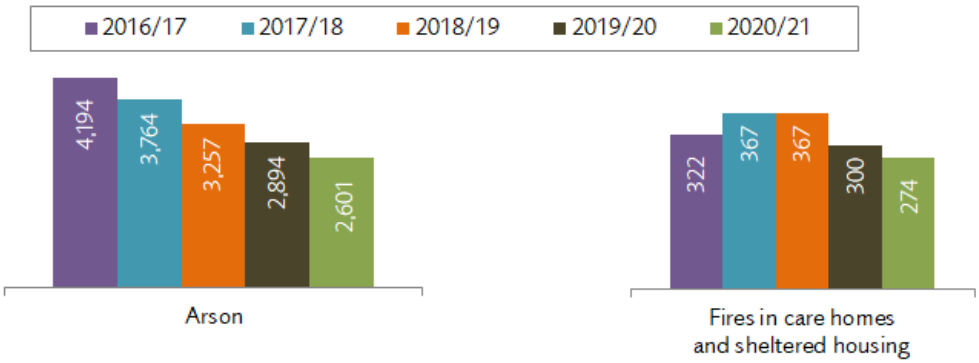
- The total numbers of **primary fires** include incidents of different types; some will require no firefighting whilst others will require the attendance of a large number of fire engines. In 2020/21, 50 per cent of primary fires either required no firefighting or 'small means'(22 per cent), e.g. stamping out, bucket of water. Only 14 per cent of fires were attended by five or more fire engines[3], or were larger fires (the use of main jets/hose reels).



[3] Note: the number of incidents attended by five or more fire engines includes those high-rise incidents which received an initial standard attendance of five fire engines; some of these incidents will not be significant or larger fires and would otherwise be categorised as medium or small fires, or would have required no firefighting.

- **Deliberate fires** (i.e. potential 'arson') have continued to fall and the number in 2020/21 is the lowest for the five years displayed, and some 38 per cent lower than in 2016/17.

- In the LSP5, the Brigade was concerned by the number of older people who are harmed or killed by **fires in care homes/sheltered housing** where they should be safe. We introduced a headline target (which is continued in the current London Safety Plan 2017) focusing on reducing the fires in care homes and sheltered housing. The numbers of these fires in these places has largely been reducing, with the number in 2020/21 some 16 per cent lower than the five year average.



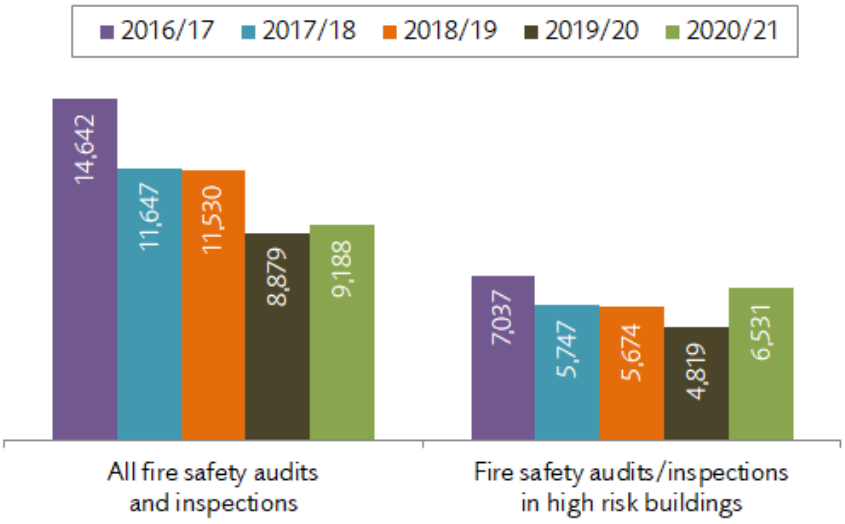
Note: Arson and fires in care homes not to same scale.

Fire safety

Regulatory fire safety

- Data on **all fire safety inspections/audits** and for **inspection/audits to high-risk premises** and this data is provided at borough level only (annex 1E). London-wide data for the past five years, including 2020/21, is set out in the chart below. There is no direct relationship between the stations and pumping appliance reductions in LSP5 and the volume of regulatory fire safety work undertaken, as this is currently carried out by specialist non-station-based staff.

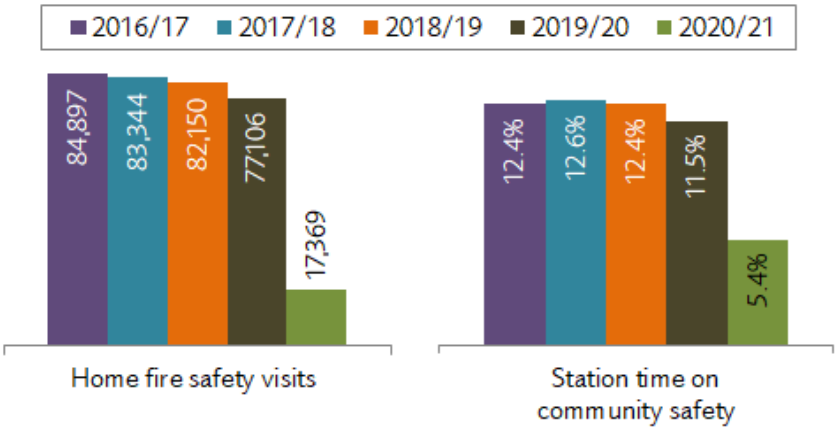
- The numbers of **fire safety audits/inspections** have fallen in recent years, particularly since the Grenfell Tower fire after June 2017, as new risk-based audit and inspection priorities have been introduced. Although in 2020/21 these have both started to increase again.



Community safety

- Data for the numbers of **home fire safety visits** (HFSVs) carried out (mainly by fire station staff) and time spent on community safety activity by fire station staff is available by borough in annex 1E. The London-wide data for the last five years is in the chart below, and lower numbers in 2020/21 are due to reduced activity due to Covid-19 restrictions.

- Data for the proportion of **time spent on community safety by station-based staff** is published at borough level only in annex 1E. The London-wide data for the last five years is in the chart below. The proportion of time spent on community safety activities (including home fire safety visits) by fire station staff has largely been consistent over the five-year although fell significantly in 2020/21. Some of the reduced levels of activity in 2020/21 can be attributed to Covid-19 restrictions from March 2020.



Notes: HFSVs and 'station time' not to same scale.

LFB performance compared to all English fire and rescue services

This review of statistics for the year 2020/21 (year ending March 2021) for fire and rescue services (FRSs) in England is published by the Home Office[4]. The results for England (with London added using Brigade statistics[5] in italics) show:

Incidents attended by the fire and rescue service

518,263 incidents were attended by FRSs. This was a seven per cent decrease compared with the previous year (558,013), a two per cent decrease compared with five years ago (529,674) and a 20 per cent decrease compared with ten years ago (647,362).The decrease in incidents attended this year compared with last year was driven by decreases in all three main incident types (fires, non-fire incidents and fire false alarms) with some elements affected by the restrictions on life imposed throughout year ending March 2021 in response to the COVID-19 pandemic.

- *LFB attended 96,702 incidents in 2020/21. This was an eight per cent decrease compared with the previous year (105,552), an eight per cent decrease compared with five years ago (104,741) and a 17 per cent decrease compared with ten years ago (115,976).*

Fires

FRSs attended 151,086 fires. This was two per cent decrease compared with the previous year (154,180) and a 34 per cent decrease compared with ten years ago (228,412 in 2010/11). There were 61,912 primary fires, a ten per cent decrease compared with the previous year (68,771); three categories of primary fires (dwelling fires, other buildings fires and vehicle fires) showed decreases over this time, only outdoor primary fires, the smallest category of primary fire, showed an increase over this time.

- *LFB attended 16,959 fires. This was four per cent decrease compared with the previous year (17,747) and a 37 per cent decrease compared with ten years ago (27,042 in 2011/12). There were 8,455 primary fires, a 12 per cent decrease compared with the previous year (9,619); three categories of primary fires (dwelling fires, other buildings fires and vehicle fires) showed decreases over this time, only outdoor primary fires, the smallest category of primary fire, showed an increase over this time.*

False alarms

FRSs attended 216,149 fire false alarms, a seven per cent decrease compared with the previous year (231,630), a one per cent increase compared with five years ago (214,411) and a 21 per cent decrease compared with ten years ago (272,179).

- *LFB attended 46,919 fire false alarms, an 11 per cent decrease compared with the previous year (52,695), a six per cent decrease compared with five years ago (49,744) and a 13 per cent decrease compared with ten years ago (54,198).*

Non-fire incidents (special services)

FRSs attended 151,028 non-fire incidents, a 12 per cent decrease compared with the previous year (172,203) and a one per cent decrease compared with five years ago (152,987).

[4] Fire and rescue incident statistics: England, year ending March 2021. 12 August 2021 (Home Office)
[5] Fire Statistics Data Tables (Home Office Data Tables)

- *LFB attended 32,824 non-fire incidents, a seven per cent decrease compared with the previous year (35,110) and a five per cent decrease compared with five years ago (34,727).*

Fire-related fatalities

There were 240 fire-related fatalities compared with 245 in the previous year (a decrease of 2%), the lowest financial year figure since comparable data became available in year ending March 1982 and the number of fatalities has been at historically low levels in recent years. There were 186 fire-related fatalities in dwelling fires, compared with 200 in the previous year (a decrease of 7%).

- *There were 34 fire-related fatalities compared with 33 in the previous year (a increase of 3%), There were 33 fire-related fatalities in dwelling fires, compared with 28 in the previous year (a increase of 18%).*

Fire-related non-fatal casualties

There were 6,347 non-fatal casualties, an eight per cent decrease compared with the 6,910 in the previous year. The lowest number of non-fatal casualties since year ending March 1982. There has been a 17 per cent decrease compared with the 7,672 non-fatal casualties five years ago and a 32 per cent decrease compared with 9,397 ten years ago.

- *There were 827 non-fatal casualties, a nine per cent decrease compared with the 904 in the previous year. The lowest number of non-fatal casualties since year ending March 1982. There has been an 18 per cent decrease compared with the 1,011 non-fatal casualties five years ago and a 39 per cent decrease compared with 1,354 ten years ago.*

Notes on data

Correction to data for earlier years

This document includes some minor corrections to some data for years before 2020/21 published to support earlier versions of the Statement of Assurance. These are minor corrections and do not materially impact on any conclusions to be drawn from the data.

Attendance time calculation

Fire engine response times

The way in which fire engine response times are calculated is described in the document ***Fire Facts – Incident Response Times 2020*** available on the LFB web site. In line with LSP2017, the calculation has been varied to provide greater accuracy in terms of performance. The method of calculation as described previously is set out below.

Attendance times for fire engines are measured from (a) the time an appliance is mobilised to (b) the time the appliance arrives at the incident scene. No special appliances (e.g. aerial appliances, fire rescue units) currently have published attendance times. The standard applies London-wide to any type of emergency incident.

The following criteria are used to calculate published attendance time performance:

- Arrival times for all pumping appliances regardless of location of the appliance at time of mobilisation and will include appliances from other station grounds.
- First appliance and second appliance is determined by the order of arrival at the incident, i.e. the first appliance will be the first to arrive not necessarily the first to be mobilised.

- Mobilisations included in the calculation are for:
  - Incidents in London only.
  - London pumping appliances only; pumping appliances from neighbouring brigades that attend in London are not included.
  - Appliances on any mobilised attendance, including running calls, incident upgrades, additional mobilisations.
  - Mobilisations where a time value is present in the data; sometimes 'time arrived' is missing due to a failure (human or technical) to record the time.
- Mobilisations are excluded where:
  - The incident is a 'shut in lift' release not attended as an emergency (i.e. not on 'blue light').
  - The calculated attendance time is greater than 20 minutes (because this generally reflects a failure (human or technical) to record a time of arrival in a timely manner.
  - The mobilisation is to a batch mobilised flooding call.
  - The mobilisation was a relief appliance for an appliance mobilised as part of the initial or upgraded attendance.
  - The attending crew has added a delay code for: 'arrival time incorrect', 'did not arrive', 'returned by stop', or attendance at 'non-emergency road speed'.

Special appliance response times

The performance calculation for special appliance response times follows the same methodology as that for fire engine response times (as set out above), except that instead of excluding times greater than 20 minutes, the exclusion is set at 40 minutes given the expected longer arrival times for special appliances.

Second and third appliance average attendance performance

Data for average **third appliance response times** is provided by ward (in annex 2A). There is no target attendance time for third appliance. In this ward data there are some cases where the third appliance response is shown with a faster time than the second appliance response. This is a function of maths. Take an example of six incidents in one ward. For each incident, the times are consistent with first faster than second and second faster than third. But when they are averaged, you get a third appliance average response time faster than second appliance, as follows:

	First	Second	Third
Incident 1	05:02	07:54	
Incident 2	06:32	07:21	
Incident 3	04:45	06:23	07:04
Incident 4	05:22		
Incident 5	03:13	06:48	06:57
Incident 6	05:37	10:02	
Average	**05:05**	**07:41**	**07:00**

Methodological difficulties working at ward level

Ward level data is provided at the request of former LFEPA Members to assist with an assessment of the impact of the changes to fire stations and pumping appliances arising from the LSP5 (and after). As outlined in earlier documents, during LSP5 consultation and in the Statement of Assurance 2013/14 onwards, some caution is need in interpreting ward level data.

To summarise:

- **high level of variability in ward demand and ward response performance year-on-year.** In 2020/21, nearly one third (31 per cent) of wards had fewer than two incidents a week (211 wards). Also, as outlined earlier, in 2020/21, nearly two thirds (58 per cent) of all incidents are attended by only one appliance. The small number of incidents receiving more than one appliance means that ward response times, particularly where a second or third appliance are mobilised, are subject to considerable variability year-on-year. Some of the data shown for an individual ward will reflect what happened on a single occasion. In other wards it will reflect the average of what happened across a range up to 100 incidents.

- **changes to wards in three boroughs:** Wards in three boroughs changed on 22 May 2014 in Hackney, Kensington and Chelsea and Tower Hamlets. There were also changes to wards on 3 May 2018 in Bexley, Croydon, Southwark, and Redbridge. There were 657 wards in 2018/19, and data for this report is consistently based on the wards as they were after May 2018 even for periods before the change. It is not, therefore, possible to makes a direct comparison with ward data published in this document and the data published during LSP5 consultation.

- **temporary changes due to station rebuild programmes:** A number of boroughs and many wards in 2014/15 and 2015/16 were directly impacted by temporary station closures and the temporary removal or displacement of pumping appliances due to a station rebuilding programme. Those stations which were closed for all or part of these years, will have had a temporary impact on ward attendance times in the area. For example, during 2015/16, six stations were closed at various points during the year[6].

[6] Dagenham, Dockhead, Leytonstone, Plaistow, Purley, and Shadwell.

Annex 1 | Borough data

Annex 1A – First, second and third pumping appliances attendance times

Annex 1B – Special appliance (aerial and fire rescue unit) attendance times

Annex 1C – Emergency calls, incidents attended, fires, primary fires, arson (all deliberate fires), accidental dwelling fires, fires in care homes and sheltered housing

Annex 1D – Fire casualties (deaths and serious fire injuries).

Annex 1E – Fire safety – regulatory fire safety audits/inspections in premises not previously visited and in high risk premises, station time on community safety and home fire safety visits.

Annex 1A | First, second and third pumping appliances attendance times – borough data

	First pumping appliance					Second pumping appliance					Third pumping appliance					Overall incident response time (from call answer to arrival of first pumping appliance)					Crew turnout time (pumping appliances)

Note: All incidents attended in London.

Note: All fires (primary, secondary, chimney and late call) attended in London.

Note: All primary fires in London (including late calls). Primary fires include all fires in buildings, vehicles and outdoor structures or any fire involving casualties, rescues, or fires attended by five or more appliances.

Note: All fires (primary, secondary, chimney and late call) where the motive is recorded by attending crew as 'deliberate'.

Note: A primary fire in a dwelling (including late call) with an accidental (or unknown) motive. A dwelling is a flat, maisonette or house/bugalow. Dwellings do not include non-self contained sheltered housing, or care/residential homes, hostels, etc.

Note: Data includes care and residential homes, and sheltered housing (both self-contained and not self-contained),

Note: Numbers may vary from those previously reported due to data being refreshed retrospectively.

Note: Numbers may vary from those previously reported due to data being refreshed retrospectively.

Note: These are home fire safety visits carried out by fire station crews, light duty staffs and CS practitioners. The numbers exclude any visits carried out by partners.

Note: The percentage of time is for the LFB management borough (i.e. Surbiton in Kingston). Lambeth station has been to returned to Lambeth borough retrospectively.

Annex 2 | Ward data

Annex 2A – Appliance attendance times: first, second and third pumping appliances, aerial appliances, fire rescue units.

Annex 2B – Incidents, fires, dwelling fires, fires in care homes and sheltered housing, fire deaths and serious fire injuries.

The annex 2 data is within the excel document named Annex 2 - Ward Data - 2020-21

Annex 2A | Pumping and special appliance attendance times - ward data

Borough	Ward	First appliance					Second appliance					Third appliance					Fire rescue unit					Aerial appliance					Overall incident response time (call answer to arrival of first appliance)

Note: All fires (primary, secondary, chimney and late call) where the motive is recorded by attending crew as 'deliberate'.

Note: A primary fire in a dwelling (including late call). A dwelling is a flat, maisonette or house/bugalow. Dwellings do not include non-self contained sheltered housing, or care/residential homes, hostels, etc.

Note: Data includes care and residential homes, and sheltered housing (both self-contained and non self-contained),

Note: All deaths at fires where the cause was the fire or smoke.

Note: Serious injuries at fires that required medical attention at hospital (either slight or serious, but excluding precautionary checks and first aid at scene).
