Introduction

This document sets out key performance information for five years to 2017/18 to support the Statement of Assurance (SoA) for 2017/18.

During the five year period covered by this document, changes were made to the number of fire stations and fire engines as part of the implementation of the Fifth London Safety Plan¹ (LSP5). The LSP5 closed 10 fire stations in London and removed 14 pumping appliances and was implemented in January 2014. In addition to the LSP5 changes, 13 further fire engines were permanently removed from stations in June 2016; these fire engines had been temporarily removed from stations in August 2013 to provide a contingency resource – the Emergency Fire Crew Capability (EFCC) – in the event of strike action.

Fifth London Safety Plan (LSP5)

The Fifth London Safety Plan (LSP5) was approved by the former London Fire and Emergency Planning Authority (LFEPA) on 12 September 2013, following a Mayoral Direction. Changes to fire stations and fire engines set out in the LSP5 were implemented on 9 January 2014 as follows:

- The closure of 10 fire stations.
- The number of fire engines (pumping appliances) reduced by 14 (net).
- Five appliances were redeployed to different stations.
- The number of fire rescue units (specialist rescue vehicles) reduced from 16 to 14.
- The minimum crewing levels on fire rescue units reduced from five firefighters to four.

Other changes at stations were introduced (before 9 January 2014) including:

- Alternate crewing introduced on the scientific support units at Poplar and Hammersmith.

- Alternate crewing introduced on the two remaining incident response units at Wimbledon and Plaistow
- On-demand mobilising for hose-laying and bulk foam units at the incident support centres.

Impacts on performance in the period since LSP5 to 2017/18

Performance in 2017/18 is impacted by a range of changes alongside those in LSP5 which includes the temporary removal of EFCC appliances and station/appliances temporary changes as a result of the PFI station rebuilding programme. In considering some of the numbers in this document it is important to recognise the changes to fire stations and fire engines across the five performance years (April to March), as follows:

- **in 2013/14** – the performance year with 27 EFCC appliances temporarily removed (from August 2013), LSP5 changes implemented (from January 2014) and stations/appliances changes arising from the property PFI project (from various dates).
- **in 2014/15** – the performance year with LSP5 changes fully implemented, but still with 13 EFCC appliances removed and station changes arising from the station PFI project.
- **in 2015/16** – the performance year with LSP5 changes fully implemented, 13 EFCC appliances temporarily removed from stations, and temporary station closures arising from the PFI station rebuilding programme. In November 2015, a new mobilising system was live, which introduced (a) mobilising to individual addresses (rather to a street); and (b) geographic mobilising which used a fire engine location to determine which was closest to be mobilised to an incident.
- **in 2016/17** – the performance with LSP5 changes fully implemented, 13 EFCC appliances temporarily removed from stations from April 2016 and permanently removed from June 2016, and

¹ The London Safety Plan is the LFC's Integrated Risk Management Plan.

there were a few temporary station closures arising from the PFI station rebuilding programme in April, May and June 2016.

- **in 2017/18** – the SoA year. There were no changes to fire stations or fire appliances this year.

Performance reporting

The data in this document is not focussed on performance against indicators/targets, but provides a trend analysis for the various data sets present.

The former LFEPA Governance, Performance and Audit Committee (GPAC) in November 2017 received a six monthly performance report which detailed performance against indicators (including much of the data in this report), with commentary. The last report considered by LFEPA was for the period to end September 2017 (FEP2801). That report is available [here](#).

The end of year position for 2017/18 was published by the London Fire Commissioner and is available on the Brigade's web site and on the London Datastore [here](#). The data published in this document for 2017/18 is consistent with the end of year report.

Emergency calls received and incidents attended

- The numbers of emergency (999) calls received and the incidents attended over the five years to 2017/18 are set out in the chart below.
- Data for incidents attended is available in annex 1C (borough) and 2B (ward). Emergency call data is not available at ward or borough level as the location of a caller is not captured.
- London-wide, the number of **incidents attended** by the Brigade in 2017/18 was similar to 2016/17 and only slightly above the number in 2013/14. The number of **emergency calls received** was slightly lower in 2017/18, and two per cent lower than five years ago.

- The total number of **fires** attended fell slightly in 2017/18 and was below 20,000 for only the second time ever (previously in 2014/15) and is the lowest annual number of fires on record. **Special services** showed a slight fall in 2017/18 and this is due to fewer attendance at medical incidents because the co-responding trial with the London Ambulance Service had come to an end in September 2017. **False alarms** were up in 2017/18 compared to the year earlier and at the highest level of the five years shown.

Attendance times

First, second and third pumping appliances

- The London-wide attendance time performance² for first, second and third pumping appliances (fire engines) is summarised in the chart below. London-wide and borough attendance times for five years are set out in annex 1A (borough) and Annex 2A (ward). The Brigade aims to meet its attendance standard at borough level, but does not undertake to meet its attendance standards at any smaller geography (e.g. at ward level).

- Average speed of arrival for a **first appliance** at an incident in 2017/18, at 5m:13s, is some five seconds faster than in 2013/14 (the year before the LSP5 changes were fully implemented). In 2017/18, only Hillingdon borough fell outside the six minutes average target for first appliance (at 6m:13s). The temporary closure of some fire stations for rebuilding between 2014/15 and 2015/16 resulted in slower first and second appliance times in those years.
- London-wide, **second appliance** average response time to incidents in 2017/18, at 6m:34s, was five seconds faster than in 2013/14 (the year before the LSP5 changes were fully implemented). In 2017/18, only Hillingdon borough was just outside the second appliance average attendance target of eight minutes at 8m:01s. The changes in LSP5 and the removal of EFCC appliances would have impacted more on second appliance performance given the overall removal of 17 second fire engines (compared to 10 first fire engines).
- London-wide, the average **third appliance** response time, at 7m:46s, in 2017/18 was 24 seconds faster than in 2016/17, and the faster time out of the five years shown. There is no target for third appliance speed of arrival, but performance is well within the benchmark average of 10 minutes used during LSP5 consultation. No borough in 2017/18 fell outside this benchmark.

² See the 'Notes on data,' on page 19.

- In considering attendance time performance, it should be noted that 58 per cent of all incidents were attended by only one appliance; 33 per cent of incidents received two appliances, with just 10 per cent receiving three or more appliances. The data underpinning third appliance attendance time performance is, therefore, more limited than that for the first appliance.

Pumps attending incidents in the five years to 2017/18

Overall pumping appliance 'incident' response time and crew turn-out time

- The overall **incident response time**, at 6m:54s, was 14 seconds faster in 2017/18 than the year before (2016/17), and the best time of the five years shown. The London-wide performance is shown in the chart below. As the incident response time covers call handling, the equivalent performance target (for a first appliance) would be an average 7m40s (1:40 call handling plus 6 minute attendance). Only Enfield and Hillingdon boroughs had an incident response time outside this notional target. Details of the overall **incident response time** between answering the 999 call answer and arrival of the first pumping appliance at incident scene are published for in annexes 1A (borough) and 2A (ward).
- Crew turn-out** performance, at 1m:16s, is the fastest of the five years shown in the chart below. Apart from in 2015/16, when turn-out times were impacted by temporary deployment of crews to other stations whilst station rebuilding work was underway, there has been a slowly improving crew turn-out performance over the five years to 2017/18. It would not be expected that crew turnout performance would be impacted by the changes to stations and pumping appliances implemented in LSP5 or the removal of EFCC appliances. The crew turn-out time is part of the first, second and third appliance response times (which are measured from the time of mobilisation to arrival at the incident address). Data on pumping appliance crew turnout performance is available by borough in annex 1A; as this data is for station watch performance, it is not available at ward level.

Note: crew turnout time not to same scale.

Special appliances

- Data for special appliance average response times – for fire rescue units (FRUs) and aerial appliances – is shown in the chart below for five years up to 2017/18. Data for borough and ward performance is shown in annex 1B and annex 2A respectively.
- London-wide, average **aerial appliance** response times were 08m:35s in 2017/18. This is slightly slower (two seconds) than in 2016/17 (8m:33s). There are no attendance standard for aerial appliances. There were no changes made to the number or deployment of aerial appliances in LSP5 or over the five years for which data is displayed. Performance is relatively consistent over the five years.
- London-wide, average **fire rescue unit** response times were 11m:19s in 2017/18, and this is slightly faster than each of the three earlier years from 2014/15 to 2016/17. There is no attendance standard for fire rescue units. In LSP5, FRUs were removed from Hornchurch in Havering, and Millwall in Tower Hamlets, which would account for the change in performance between 2013/14 and other years including 2017/18 (+23 seconds).

Ward pumping appliance attendance times

- Ward data for first and second pumping appliance attendance times is in annex 2A. The Brigade does not undertake to meet its attendance standard at ward level.
- 75 per cent of wards in 2017/18 had a **first appliance** within the average six minute target (it was 71 per cent in the previous year, 2016/17). Comparing performance in 2017/18 with the year when LSP5 changes and EFCC removals were implemented; i.e. 2013/14, there were 56 fewer wards outside target in the most recent year. The greater number of wards outside target in 2014/15 and 2015/16 reflects the temporary closure of some stations for rebuilding.

- Of the 155 wards outside the first appliance average six minute target in 2017/18, 79 wards were within 30 seconds of the target with 76 wards more than 30 seconds outside the target. The chart below shows wards outside the target within four time bands to show how far they were away from the target, together with the cumulative number of wards at each time band.

- Performance for **second appliance** comparing 2017/18 against 2013/14 shows fewer wards outside the target in the most recent year, than in any other year. So, 86 per cent of wards were within the average eight minute second appliance target (82 per cent in the year before). The greater number of wards outside target in 2014/15 and 2015/16 reflects the temporary closure of some stations for rebuilding.

- Of the 93 wards outside the second appliance average eight minute target in 2017/18, 43 wards were within 30 seconds of the target, and 50 wards more than 30 seconds outside the target. The chart below shows wards outside the target within four time bands, to show how far they were away from the target, together with the cumulative number of wards at each time band.

Fire casualties (fatal and non-fatal)

- Data about fire casualties is available in annexes 1D (borough) and 2B (ward) respectively. The number of fire deaths at borough and ward level is generally very small, so there are always limitations on the statistical conclusions that can reliably be drawn from these data.
- The chart below shows the numbers of fire casualties (fatal and non-fatal) for the five year period up to 2017/18. There was an upturn in all casualties in 2017/18 as a result of the Grenfell Tower fire. The 10 year average for all fire deaths is also impacted by the number of fatalities from Grenfell Tower, as were serious fire injuries.

- There are different **types of fire death**. Some are result of deliberate acts (which will include deliberate fire-setting (arson), suicide, or homicide), and some are accidental. Of the accidental fire deaths, the cause of the fire can be the result of faulty equipment or supply, or have a human cause (e.g. careless disposal of a cigarette, clothing too close to a heat source). The 74 fire deaths in 2017/18 due to fires of "faulty appliance/supply" cause include the deaths at the Grenfell Tower fire. Fire deaths due to "human element" were lower in 2017/18 compared to the other years shown.

Note: "Accidental: other" includes fires (and deaths) where the cause was not known or is still under investigation. The bar showing the 74 deaths in 2017/18 due to "Accidental: faulty appliance/supply" has been truncated.

- One factor that is key to whether a person is injured or dies in a fire, is the **delay in discovering the fire and calling the fire brigade**. The chart below shows the estimated delay between ignition of the fire and calling the brigade, based on the work of crews and fire investigators. In 2017/18 and the four further years displayed in the chart, over 80 per cent of cases there was a delay of five minutes or more in calling the Brigade (data is not available for 20 per cent of fatalities).

Estimated delay between fire ignition and call to the Brigade for fire fatalities in London

Note: Typically, across the five years displayed, this data is not available for about 20 per cent of fire deaths.

Fires

- Borough and ward data for all fires, primary (more serious) fires, accidental dwellings fires, and fires in care homes/sheltered housing, are in annexes 1C and 2B respectively.
- London-wide, the number of **primary fires** and **accidental dwelling fires** continued to fall in 2017/18 and that pattern is maintained across the period covering the implementation of LSP5 in January 2014 and removal of EFCC appliances. The number of **secondary fires** fluctuates as open land and grass fires in summer months are a significant proportion of these fires and are higher in years which have more warmer/drier summer periods (like 2015/16).

- The total numbers of **primary (more serious) fires** include incidents of different types; some will require no firefighting whilst others will require the attendance of a large number of fire engines. In 2017/18, 50 per cent of primary fires either required no firefighting (20 per cent) or 'small means', e.g. stamping out, bucket of water (30 per cent). Only seven per cent of fires significant or larger fires.

Firefighting action at primary fires, 2017/18

- Data for all **deliberate fires** (i.e. potential 'arson') and for **fires in care homes/sheltered housing** is set out in the chart below. In the period since LSP5 was implemented, arson incidents have remained relatively flat and are lower than five years ago in 2017/18. In LSP5, the Brigade was concerned by the number of older people who are harmed or killed by fire in places where they should be safe, and we introduced a new headline target focusing on reducing the fires in care homes and sheltered housing; over the life of LSP5, the numbers of these fires in these places has largely reduced.

Note: Arson and fires in care homes not to same scale.

Fire safety

Regulatory fire safety

- Data on **all fire safety inspections/audits**, those in **premises not previously visited** and for **inspection/audits to high-risk premises** and this data is provided at borough level only (annex 1E). London-wide data for the past five years, including 2017/18, is set out in the chart below.
- There is no direct relationship between the stations and pumping appliance reductions in LSP5 and the volume of regulatory fire safety work undertaken, as this is currently carried out by specialist non-station based staff.
- The numbers of **fire safety audits/inspections**, including **audits in buildings not previously visited**, has fluctuated over the last few years with a fall in 2017/18 because of the impact of the rollout of the new 'mobile working device' for inspecting officers and the issues arising following the Grenfell Tower fire after June 2017.

Community safety

- Data for the proportion of **time spent on community safety by station based staff** is published at borough level only in annex 1E. The London-wide data for the last five years is in the chart below. The indicator is expressed as a proportion of available time on the day shift by the crews of pumping appliances. Borough data has been provided, as requested, but it should be noted that this is a measure of the proportion of time spent on community safety, so a smaller amount of time by a reduced number of crews arising from LSP5 changes might not show a reduction.
- Data for the numbers of **home fire safety visits** (HFSVs) carried out (mainly by station staff) and time spent on community safety activity by fire station staff is available by borough in annex 1E. Data for time spent is the percentage of time for the stations located in the LFB management borough³ (i.e. Surbiton station is counted as part of the Kingston borough total). The London-wide data for the last five years is in the chart below.
- In 2013/14, the Brigade carried out 83,947 **home fire safety visits** and in the last performance year (2017/18) nearly 83,341 visits were undertaken. Despite the reduction in the number of crew as a result of the LSP5 closure of fire stations, and removal of appliances, the volume of home fire safety visits has been largely maintained with levels in 2017/18 equivalent to 2013/14, largely before LSP5 changes happened.
- The proportion of **time spent on community safety** activities (including home fire safety visits) by fire station staff has been maintained over the five year period shown below, and the proportion of time in 2017/18 is at its high level for the period (equal to 2014/15).

Notes: HFSVs and 'station time' not to same scale.
Performance for station time on community safety based on the method of calculation of time used in 2017/18.

³ In previous similar reports, 'time spent' by Lambeth fire station was counted as part of the Westminster borough (which was previously the LFB management borough). Lambeth station data is now counted as part of Lambeth borough including for earlier years.

Comparison with performance of in London compared to all English fire and rescue services

This review of statistics for the year 2017/18 (or ending March 2018) for fire and rescue services (FRSs) in England was produced by the Home Office⁴. The results for England (with London added using Brigade statistics in italics) show:

- FRSs attended 564,827 incidents in 2017/18. This was a one per cent increase compared with the previous year (560,453) but a 29 per cent decrease compared with ten years ago (791,746 in 2007/08). The total number of incidents was on a downward trend for around a decade, though they have increased in recent years mainly driven by increases in non-fire incidents attended. However, the small increase this year was mainly driven by an increase in fires attended.
 - *LFB attended 104,689 incidents in 2017/18. This was less than half a percent lower than the previous year (104,721) but a 28 per cent decrease compared with ten years ago (144,822 in 2007/08); this is a reduction consistent with the national downward trend. In line with the national trend, the total number of incidents in London was on a downward trend for around a decade (until 2014/15), though the number has increased in recent years mainly driven by increases in non-fire incidents attended.*
- FRSs attended 167,150 fires in 2017/18. This was a three per cent increase compared with the previous year (161,997) but a 43 per cent decrease compared with ten years ago (293,920 in 2007/08). The increase in fires is driven by an increase in secondary fires with primary fires showing a small decrease.
 - *LFB attended 19,525 fires in 2017/18. This was four per cent lower compared with the previous year (20,259) but a 41 per cent decrease compared with ten years ago (32,892 in 2007/08); this is a reduction consistent with the national downward trend. The overall reduction in fires in London in 2017/18 was driven by lower numbers of secondary fires, with primary fires increasing slightly.*
- FRSs attended 225,625 fire false alarms in 2017/18. This was a one per cent increase compared with the previous year (223,896) but a 32 per cent decrease compared with ten years ago (331,478 in 2007/08).
 - *LFB attended 52,301 fire false alarms in 2017/18. This was a two per cent increase compared with the previous year (51,266) but a 27 per cent decrease compared with ten years ago (71,310 in 2007/08).*
- FRSs attended 172,052 non-fire [special service] incidents in 2017/18. This was a one per cent decrease compared with the previous year (174,560). For around a decade, there had been a general decline in the number of non-fire incidents. However, recent years have shown large increases, largely due to a rise in medical incidents attended. The recent decrease in non-fire incidents is mainly due to a decline in emergency medical responding linked to many of the trials stopping in September 2017.
 - *LFB attended 32,861 non-fire (special service) incidents in 2017/18. This was a two per cent decrease compared with the previous year (33,206). For around a decade, there had been a general decline in the number of non-fire incidents. However, recent years have shown increases in London, largely due to a pilot to co-respond with the London Ambulance Service (LAS) to certain medical incidents. The recent decrease in non-fire incidents in London reflects the national decline in emergency medical responding linked to trial stopping in London in September 2017.*
- Of all incidents attended by FRSs in 2017/18, fires accounted for 30 per cent and non fire incidents 30 per cent. The remaining 40 per cent were fire false alarms, which continued to be the largest incident type. In 2007/08

⁴ Fire and rescue incident statistics: England, year ending March 2018, Statistical Bulletin 16/18, 9 August 2018 ([Home Office](#))

these percentages were 37 per cent (fires attended), 21 per cent (non-fire incidents) and 42 per cent (fire false alarms).

- *Of all incidents attended by LFB in 2017/18, fires accounted for 19 per cent and non fire incidents 31 per cent. The remaining 50 per cent were fire false alarms, which continued to be the largest incident type. These proportions for fire and non-fire incidents in London, particularly for fires, are significantly different for the position for England as a whole. In 2007/08, in London these percentages were 23 per cent (fires attended), 28 per cent (non-fire incidents) and 49 per cent (fire false alarms). The higher proportion of false alarms in London is likely to be attributable to greater proportion of commercial buildings in the capital and the false alarms due to automatic fire alarms (AFAs).*
- The number of fire-related fatalities had been on a general downward trend since comparable figures first became available in 1981/82, when there were 755 fire-related fatalities, though the numbers have fluctuated due to the relatively small numbers involved. In 2017/18, however, there were 334 fire-related fatalities (including 71 from the Grenfell Tower fire) compared with 263 in the previous year (an increase of 27 per cent).
 - *The number of fire-related fatalities had been on a general downward trend since comparable figures first became available in 1981/82, when there were over 180 fire-related fatalities in London, though the numbers have fluctuated due to the relatively small numbers involved. In 2017/18, however, there were 109 fire-related fatalities (including those from the Grenfell Tower fire) compared with 44 in the previous year (an increase of 148 per cent).*
- There were 3,306 non-fatal fire casualties requiring hospital treatment⁵ in 2017/18 (including 77 from the Grenfell Tower fire). This was a six per cent increase compared with the previous year (3,128) but a 13 per cent decrease compared with five years ago (3,811 in 2012/13).
 - *There were 686 non-fatal fire casualties in London requiring hospital treatment in 2017/18 (including injuries from the Grenfell Tower fire). This was a 27 per cent increase compared with the previous year (542) but an 11 per cent decrease compared with five years ago (775 in 2012/13).*

⁵ Casualty figures include casualties whether the injury was caused by the fire or not. Fatalities are only included if they are fire related.

Notes on data

Corrections

This document includes some minor corrections to some data for years earlier than 2017/18 and published to support earlier versions of the Statement of Assurance. These are minor corrections and do not materially impact on any conclusions to be drawn from the data.

Attendance time calculation

Fire engine response times

The way in which fire engine response times are calculated is described in the document **Fire Facts - Incident Response Times 2017** available on the LFB web site. In line with LSP2017, the calculation has been varied to provide greater accuracy in terms of performance. The method of calculation as described previously is set out below.

Attendance times for fire engines are measured from (a) the time an appliance is mobilised to (b) the time the appliance arrives at the incident scene. No special appliances (e.g. aerial appliances, fire rescue units) currently have published attendance times. The standard applies London-wide to any type of emergency incident.

The following criteria are used to calculate published attendance time performance:

- Arrival times for all pumping appliances regardless of location of the appliance at time of mobilisation and will include appliances from other station grounds.
- First appliance and second appliance is determined by the order of arrival at the incident, i.e. the first appliance will be the first to arrive not necessarily the first to be mobilised.
- Mobilisations included in the calculation are for:
 - Incidents in London only.
 - London pumping appliances only; pumping appliances from neighbouring brigades that attend in London are not included.

- Appliances on any mobilised attendance, including running calls, incident upgrades, additional mobilisations.
- Mobilisations where a time value is present in the data; sometimes 'time arrived' is missing due to a failure (human or technical) to record the time.
- Mobilisations are excluded where:
 - The incident is a 'shut in lift' release not attended as an emergency (i.e. not on 'blue light').
 - The calculated attendance time is greater than 20 minutes (because this generally reflects a failure (human or technical) to record a time of arrival in a timely manner.
 - The mobilisation is to a batch mobilised flooding call.
 - The mobilisation was a relief appliance for an appliance mobilised as part of the initial or upgraded attendance.
 - The attending crew has added a delay code for: 'arrival time incorrect', 'did not arrive', 'returned by stop', or attendance at 'non-emergency road speed'.

Special appliance response times

The performance calculation for special appliance response times follows the same methodology as that for fire engine response times (as set out above), except that instead of excluding times greater than 20 minutes, the exclusion is set at 40 minutes given the expected longer arrival times for special appliances.

Second and third appliance average attendance performance

Data for average **third appliance response times** is provided by ward (in annex 2A). There is no target attendance time for third appliance. In this ward data there are some cases where the third appliance response is shown with a faster time than the second appliance response. This is a function of maths. Take an example of six incidents in one ward. For each incident, the times are consistent with first faster than second and second faster than third. But when they are averaged, you get a third appliance average response time faster than second appliance, as follows:

	First	Second	Third
Incident 1	05:02	07:54	
Incident 2	06:32	07:21	
Incident 3	04:45	06:23	07:04
Incident 4	05:22		
Incident 5	03:13	06:48	06:57
Incident 6	05:37	10:02	
Average	05:05	07:41	07:00

Methodological difficulties working at ward level

Ward level data is provided at the request of former LFEPA Members to assist with an assessment of the impact of the changes to fire stations and pumping appliances arising from the LSP5 (and after). As outlined in earlier documents, during LSP5 consultation and in the Statement of Assurance 2013/14 onwards, some caution is needed in interpreting ward level data.

To summarise:

- **high level of variability in ward demand and ward response performance year-on-year.**
In 2017/18, over a quarter of wards (28 per cent) had fewer than two incidents a week (175 wards). Also, as outlined earlier, in 2017/18, more than half of all incidents are attended by only one appliance. The small number of incidents receiving more than one appliance means that ward response times, particularly where a second or third appliance are mobilised, are subject to

considerable variability year-on-year. Some of the data shown for an individual ward will reflect what happened on a single occasion. In other wards it will reflect the average of what happened across a range up to 100 incidents.

- **changes to wards in three boroughs:**
Wards in three boroughs changed in 2014 impacting on 60 wards in Hackney, Kensington and Chelsea and Tower Hamlets. Data for this report is consistently on the basis of the wards in 2014 even for periods before the change. This makes direct comparison with ward data published during LSP5 consultation impossible. Changes to wards in 2018 (in Bexley, Croydon, Southwark, Redbridge) are not yet recognised in Brigade data.
- **temporary changes due to station rebuild programmes:**
A number of boroughs and many wards in 2014/15 and 2015/16 were directly impacted by temporary station closures and the temporary removal or displacement of pumping appliances due to a PFI station rebuilding programme. Those wards where stations were closed for all or part of the year, will have had a temporary impact on ward attendance times. For example, during 2015/16, six stations were closed at various points during the year⁶.

⁶ Dagenham, Dockhead, Leytonstone, Plaistow, Purley, and Shadwell.

Annex 1 | Borough data

Annex 1A – First, second and third pumping appliances attendance times

Annex 1B – Special appliance (aerial and fire rescue unit) attendance times

Annex 1C – Emergency calls, incidents attended, fires, primary fires, arson (all deliberate fires), accidental dwelling fires, fires in care homes and sheltered housing

Annex 1D – Fire casualties (deaths and serious fire injuries).

Annex 1E – Fire safety – regulatory fire safety audits/inspections in premises not previously visited and in high risk premises, station time on community safety and home fire safety visits.

Annex 1A | First, second and third pumping appliances attendance times – borough data

	First pumping appliance					Second pumping appliance					Third pumping appliance					Overall incident response time (from call answer to arrival of first pumping appliance)					Crew turnout time (pumping appliances)

Note: All incidents attended in London.						Note: All fires (primary, secondary, chimney and late call) attended in London.					Note: All primary fires in London (including late calls). Primary fires include all fires in buildings, vehicles and outdoor structures or any fire involving casualties, rescues, or fires attended by five or more appliances.					Note: All fires (primary, secondary, chimney and late call) where the motive is recorded by attending crew as 'deliberate'.					Note: A primary fire in a dwelling (including late call) with an accidental (or unknown) motive. A dwelling is a flat, maisonette or house/bugalow. Dwellings do not include non-self contained sheltered housing, or care/residential homes, hostels, etc.					Note: Data includes care and residential homes, and sheltered housing (both self-contained and not self-contained),

Note: All incidents attended in London.							Note: All primary fires in London (including late calls). Primary fires include all fires in buildings, vehicles and outdoor structures or any fire involving casualties, rescues, or fires attended by five or more appliances.					Note: All fires (primary, secondary, chimney and late call) where the motive is recorded by attending crew as 'deliberate'.					Note: A primary fire in a dwelling (including late call). A dwelling is a flat, maisonette or house/bugalow. Dwellings do not include non-self contained sheltered housing, or care/residential homes, hostels, etc.					Note: Data includes care and residential homes, and sheltered housing (both self-contained and non self-contained),					Note: All deaths at fires where the cause was the fire or smoke.					Note: Serious injuries at fires that required medical attention at hospital (either slight or serious, but excluding precautionary checks and first aid at scene).
