2.2.2 Levels 5 and 6

The amendments to the proposal at level 5 is exactly the same as for level 6. The June 2018 proposal included private residential apartments at these levels which did not include the bay window design, rather these floors were set back so that the southern facade line was aligned with the primary building line. These two floors have now become a part of the 7 storey podium element and so the level 4 residential plan below is repeated in the place of the previous level 5 and 6 layouts. There are now 8 apartments per floor here as opposed to the previous 7 apartments.

All of the residential floor plates are served by two lifts and two fire escape staircases in an arrangement that is exactly the same as the June 2018 proposal.
