**Aviation Safeguarding Assessment
(Including IFP Assessment)**

May 2020

PREAMBLE

Silvertown Homes Limited (SHL) and Greater London Authority Land and Property (GLAP) have submitted a hybrid planning application to the London Borough of Newham (LBN) for the redevelopment of the Thameside West site, accessed off Dock Road in Newham (the Site).

SHL is a property development company and joint land owners of the Site. SHL has over 65 years combined experience at delivering high quality regeneration projects across London. GLAP is a subsidiary corporation of the Greater London Authority (GLA) and took over assets and liabilities from the London Development Agency (LDA) in 2012. GLAP is primarily focused on delivering genuinely affordable homes and jobs for London.

The proposal is to construct a new high-quality residential-led mixed-use development comprising new homes, new industrial floorspace, a new local centre, a new primary school and nursery school, new community facilities, a new public park (with associated outdoor play facilities), enhanced SINC and over 800m of new riverside walk along the River Thames with ecological / biodiversity enhancements. This development has been designed to focus its community hub around the delivery of a new Dockland Light Rail (DLR) station that is proposed to be constructed on the Site by Transport for London's (TfL) in 2023.

The proposals have been designed by Foster & Partners, John McAslan & Partners, Patel Taylor and the wider project team (listed, right) taking into account comments provided by local residents during summer and public exhibition events and comments provided during pre-application discussions with a variety of statutory and non-statutory interests, including LBN and its Design Review Panel (DRP), the Greater London Authority (GLA), Transport for London (TfL), Environment Agency (EA), Port of London Authority (PLA) and London City Airport (LCA).

This document is one of a suite of planning application documents submitted to LBN, including an Environmental Statement. The planning application is available to review at LBN's office or using LBN's online services:

Terms of Reference

Our report (the "Report") has been prepared for Silvertown Homes Ltd (SHL) and the Greater London Authority's (GLA) Land and Property Team (GLAP) (the client) in accordance with our Proposal. The Report cannot be used or relied on by any entity other than the client unless a written agreement in relation to the terms on which it may be used or relied has been entered into between Swanson Aviation Consultancy Limited and that entity.

Any party other than The client who obtains access to a copy of the Report or the Report itself shall not be entitled to use it or rely on it and Swanson Aviation Consultancy Limited shall have no duty of care or liability in respect of or arising out of the Report to any person or entity other than the client. (and in the case of the latter only in accordance with the Letter of Engagement as aforesaid)

Disclaimer of Liability

This publication provides general information and should not be used or taken as business, financial, tax, accounting, legal or other advice, or relied upon in substitution for the exercise of your independent judgment. For your specific situation or where otherwise required, expert advice should be sought. Although Swanson Aviation Consultancy Limited or any of its affiliates (together, "SAC") believes that the information contained in this publication has been obtained from and is based upon sources SAC believes to be reliable, SAC does not guarantee its accuracy and it may be incomplete or condensed. SAC makes no representation or warranties of any kind whatsoever in respect of such information. SAC accepts no liability of any kind for loss arising from the use of the material presented in this publication. "

1. Executive Summary

1.1. Introduction

The Thameside Proposed Development is located West of London City Airport and located under the Approach and Take off Climb surface for London City Airport (LCY)

Based on our analysis we have determined that the Proposed Development will not penetrate any of the obstacle limitation surfaces at London City Airport.

Physical Safeguarding – The development has been designed such that no part of the fixed permeant structures for both the detailed and outline application will penetrate any of the safeguarding surfaces at LCY. Additionally, a reasonable margin has been applied to facilitate the construction of the Proposed Development as the phasing is realised.

Technical Safeguarding – With reference to the Heathrow (LHR) 10cm approach radar the National Air Traffic Services (NATS) have confirmed that the development will not impact on the operation of this radar. NATS were also engaged to undertake a technical safeguarding assessment of the Communications, Navigation and Surveillance (CNS) equipment at LCY and will be reviewing the potential for impact on the operation of the Instrument Landing System. An assessment of the previous scheme indicated no significant impact and initial discussions indicated that the changes to the scheme are unlikely to materially alter their position however the work needs to be done to confirm. It has therefore been agreed that NATS would undertake an assessment and that an appropriate condition can be agreed to allow the application to go forward.

Operational Safeguarding – A separate instrument flight procedure analysis is being undertaken by Cyrrus Ltd to determine if there is any impact on aircraft operations. With respect to obstruction lighting a solution is presented that aims at outlining the development without excessively lighting the Proposed Development with a sea of red lights. In this case the general approach is to use low intensity lights at the top corners of the buildings plus low intensity lights in areas where it would provide additional conspicuousness to help pilots identify the overall massing of the proposed development. With respect to construction and the use of cranes the Proposed Development has included for sufficient headroom beneath the safeguarding surfaces to allow for construction. As a fully defined construction methodology was not available at the time of submission of the planning application and an appropriate planning condition has been agreed. In this case the developer has agreed to work closely with the airport to provide a construction methodology plan that meets the needs of the various stakeholders. Given that the development is along the bank of the Thames a separate bird study prepared by Aviare, is included in the planning application documents.

Updates

This report has been updated since its original publication in 2018 to reflect previous comments and more importantly a slight change to the form, location and heights of some of the buildings. This assessment thus represents a new review of the proposed development.

Temple - Interim Review Report Response

Following a review of the assessment the following changes have been made to this version of the report.

Summary of Clarifications Required	Response
1. Provide details of the agreement with LCY in relation to additional technical safeguarding analysis to be completed post submission.	As stated in the report, upon submission of the application London City Airport will request NATS to review the changes to the development to determine if additional work needs to be undertaken to determine if the proposed development will impact the operation of the ILS at the airport. Additional wording providing clarification on the process is included in section 6.1 below.
2. Provide the wording of the proposed condition in relation to specialist cranes for review. Summary of additional recommendations	The following condition is representative of the text that London City Airport has used in the past and may be modified as appropriate. <i>"No cranes or scaffolding shall be erected on the site unless and until construction methodology and diagrams clearly presenting the location, maximum operating height, radius and start/finish dates for the use of cranes during the Development has been submitted to and approved by the Local Planning Authority, the Local Planning Authority having consulted London City Airport. It should be noted that no building or construction equipment shall be permitted to infringe any Instrument Flight Procedures or critical obstacle limitation surfaces."</i> Reference is to be made to section 7.4 below.
3. Correct errors in values in Table 2.	The reference height for the construction of the surfaces was based on conversations with London City Airport and conveyed as 5.303m AOD. This was in line with a resurfacing of the runway and the new runway 09 threshold height. London City Airport have recently stated that a survey has identified the runway threshold as 6.09m AOD but that a review process was underway. Subsequently the airport has requested that the height be referenced to the Type A chart which has a height of 17ft or 5.18m AOD. The chart has been updated to reflect this change at the request of London City airport. Reference is made to Table 2 Thameside

Summary of Clarifications Required	Response
	West Physical Safeguarding – Clearance to TOC Surface.
4. Identify key assumptions concerning reference points for take-off climb surface assessment.	The reference points are as per the information provided in introduction part of section 5 below and confirmed with London City Airport.
5. Use international standard terminology for the take-off climb surface.	The '&' symbol searched and replaced 4 times in the offending phrase.
6. Provide a more transparent account of the process by which the critical corners were identified or, if not possible, provide a fuller account of the proposal so that the assessment findings do not have to be taken on trust.	Reference to section 4.1 below item 2 in the methodology.
7. Provide a fuller account of the assessment of Instrument Flight Procedures, at least acknowledging all of the relevant procedures and stating why no adverse impacts are expected.	The instrument flight procedure assessment was undertaken by Cyrrus as a sperate report. Reference to that report should be made.
8. Provide a fuller and more transparent account of the assessment of Runway 09 instrument approach procedures to allow independent review.	As per item 7 above.
9. Provide a more accurate description of the basis for the H10 radar impact conclusions.	The description in the body of the text was provided to NATS and is sufficient as this was the basis for NATS to confirm that there would be no impact on the operation of the H10 Radar.

Temple - Final Review Report Response

The following is a summary of the relevant comments and responses and or changes.

Request Type	Comment/Request	Review Commentary	Review Conclusions	Response
Additional Recommendation	Correct errors in values in Table 2. The major discrepancies in the values in Table 2 to which attention was drawn at paragraph 2.5.2 of the Interim Review Report (IRR) have not been corrected.	The values of "Total Dist (m) to Origin of TOC" given in Table 2 for points 1AS1, 1BS1, 3FN1 and 6KS1 do not correspond with the OS grid coordinates for the points given in the table. The calculated height of the TOCS in Table 2 is incorrect for these points,	Accepted Whilst it is unclear why the Applicant has not corrected the errors in their report - <u>No further information required</u>	A review of the specific coordinates did identify an anomaly for 1AS1 and 6KS1. 1AS1 vertical separation to the Take Off Climb surface has been recalculated as 8.51m and 6KS1 has increased by over 10m to 20.54m due to a cell reference

Request Type	Comment/Request	Review Commentary	Review Conclusions	Response
		based on the correct distance.		error. Table 2 has been updated.
Additional Recommendation	Identify key assumptions concerning reference points for take-off climb surface assessment.	The reference elevation employed for the take-off climb surface has now been identified in the updated Aviation Safeguarding Assessment report. While the source of the coordinates has been identified, the coordinates themselves have not.	Accepted Whilst it is unclear why the Applicant has not provided the coordinates requested - <u>No further information required</u>	No action required.
Additional Recommendation	Use international standard terminology for the takeoff climb surface.	Four incorrect references to the “take-off & climb surface” have been corrected to “take-off climb surface” but another four remain, including one in the first sentence of the executive summary. It would be better if the terminology had been corrected throughout the document, but it is not essential for understanding the relevant matters	Accepted Whilst it is unclear why the Applicant has not corrected the terminology used throughout - <u>No further information required</u>	Really? 4 ‘&’ removed.
Additional Recommendation	Provide a fuller account of the assessment of Instrument Flight Procedures, at least	A fuller account has not been provided. The Applicant has instead provided reference to a	Accepted Whilst the Applicant has not provided the fuller explanation requested - <u>No further</u>	As repeatedly stated, reference is to be made to the Cyrrus report.

Request Type	Comment/Request	Review Commentary	Review Conclusions	Response
	acknowledging all of the relevant procedures and stating why no adverse impacts are expected	separate report prepared by Cyrrus. The referenced report does not address all the instrument flight procedures in use at London City Airport and the deficiency originally identified persists. It would be better if a fuller account of the process was provided that allowed for easier review and validation. This limitation however is not expected to affect the report conclusions.	<u>information required</u>	
Additional Recommendation	Provide a fuller and more transparent account of the assessment of Runway 09 instrument approach procedures to allow independent review.	A fuller account has not been provided. The Applicant has instead provided reference to a separate report prepared by Cyrrus. The reference report identifies only the conclusions and not the technical basis on which they were reached. The deficiency originally identified persists. It would be better if a fuller account of the process was provided that allowed for full	Accepted Whilst the Applicant has not provided the fuller explanation requested - <u>No further information required</u>	As repeatedly stated, reference is to be made to the Cyrrus report.

Request Type	Comment/Request	Review Commentary	Review Conclusions	Response
		review and validation. This limitation however is not expected to affect the conclusions of the report. Whilst it remains a recommendation that the Applicant provide a basis for the conclusions, provided LCY are in agreement with the anticipated impacts, this point can be closed out.		

2. Introduction

This airport safeguarding assessment has been prepared by Swanson Aviation Consultancy Ltd. and is submitted in support of the hybrid planning application part full and part outline made on behalf of Silvertown Homes Ltd (SHL) and the Greater London Authority's (GLA) Land and Property Team (GLAP) in relation to SHL's and GLAP's mixed use proposal for the Thameside West site (the Site)

The purpose of this Safeguarding Assessment is to assess the Proposed Development in terms of aerodrome safeguarding with specific reference to London City Airport (LCY), Heathrow Airport (LHR), the National Air Traffic Services (NATS) and users of the airspace in London.

2.1. Aerodrome Safeguarding

This section introduces the principles of Aerodrome Safeguarding and outlines the various reference documents and principle concepts which guide the report.

2.1.1. Consultation

For the purpose of the Proposed Development Swanson Aviation Consultancy Ltd. has been in consultation with London City Airport (LCY), the Civil Aviation Authority (CAA) and the National Air Traffic Services (NATS).

A meeting was held between Swanson Aviation Consultancy the design team and LCY on 23rd October 2018, at which the Aviation Safeguarding Assessment was presented. LCY did not raise any initial objections to the Proposed Development or the assessment findings and are in the process of reviewing it in detail. During the meeting it was agreed that further discussions with LCY will take place as the design progresses, particularly in relation to construction methodology and obstruction lighting.

For the purpose of this report, Safeguarding is divided into three areas:

- Physical Safeguarding;
- Technical Safeguarding; and
- Operational Safeguarding.

2.1.2. Physical Safeguarding

Physical Safeguarding is concerned with the relationship between obstacles and certain surfaces, which are defined to protect the operations of aircraft at the airport.

2.1.3. Technical Safeguarding

Technical Safeguarding is with reference to Communication, Navigation and Surveillance (CNS) equipment, which is utilised in the operation of the airport. In this case, the Safeguarding is aimed at determining if the Proposed Development will interfere with the operation of the CNS equipment.

2.1.4. Operational Safeguarding

Operational Safeguarding is concerned with the possibility of changes to operational procedures for the airport and any negative relationship between the Proposed Development and the relevant flight procedures. This is with reference to the various approach and departure procedures as published by the CAA.

Additionally, Operational Safeguarding is also concerned with the certification of aircraft both now and in the future, which will be allowed to operate at the Airport. Operational Safeguarding ensures that any Proposed Development does not necessarily prejudice future aviation operations at the airport.

Additional areas addressed in Operational Safeguarding in the context of the Proposed Development include:

- **Lighting** – Lighting is concerned with both the marking of an obstacle (obstruction lighting) and the architectural lighting of the Proposed Development. Where appropriate, obstruction lighting is added to a Proposed Development to allow pilots to easily identify an obstacle to flight. With respect to architectural lighting, this form of safeguarding is to ensure that any lighting scheme is not likely to confuse or dazzle pilots during critical phases of flight.
- **Birds** – In accordance with aerodrome operator licencing requirement under [Commission Regulation \(EU\) 139/2014](#), section ADR.OPS.B.020 an aerodrome operator is only required to:
 - a) assess the wildlife hazard on, and in the surrounding, of the aerodrome;
 - b) establish means and procedures to minimise the risk of collisions between wildlife and aircraft, at the aerodrome; and
 - c) notify the appropriate authority if a wildlife assessment indicates condition is in the surroundings of the aerodrome are conducive to a wildlife hazard problem.

There is no requirement or expectation for an aerodrome operator to be “responsible for the management of birds within a 13km radius of the airport” or “assess any potential changes to the baseline bird population that the Proposed Development may cause”.

Also, in section GM2 ADR.OPS.B.020 there is only an expectation for a wildlife risk management programme that may cover an area of approximately 13 km (7 NM), and should include, at least, the following elements:

- d) a process of habitat and land management both on, and in its surroundings, whenever possible, in order to reduce the attractiveness of the area to birds/wildlife;
- e) a process to remove hazardous birds/wildlife;

Oversight of the process therefore sits with the airport operator. Actual delivery of the process will be through the appropriate authority, which is the site/property owner for an existing land use or the LPA and developer for a proposed land use change.

- **Cranes** – The use of cranes during construction can be a significant issue to airports and as such is of great importance to the airport. A separate study is undertaken to address the use of cranes which can be found in section 7.4 below.

2.1.5. Reference Documents

This assessment uses appropriate Civil Aviation Authority (CAA) documentation, International Civil Aviation Organisation (ICAO) standards and recommended practices and European Aviation Safety Agency (EASA) documentation, for aeronautical procedures specific to London City Airport and various other aeronautical sources.

The principal reference documentation and design guidelines obtained and used in this study included:

- EASA CS-ADR-DSN
- CAP 32 United Kingdom Aeronautical Information Publication (UK AIP)
- CAP 168 Licensing of Aerodromes
- CAP 232 Aerodrome Survey Requirements
- CAP 729 Guidance on Aerodrome Proposed Development Procedures
- CAP 738 Safeguarding of Aerodromes
- ICAO Aeronautical Telecommunications: Annex 10
- ICAO Aerodrome Design and Operations: Annex 14
- ICAO Airport Services Manual, Part 6, Control of Obstacles: Doc. 9137
- ICAO Construction of Visual and Instrument Flight Procedures: Doc. 8168

All base measurements have been taken from available published information and information received from relevant authorities.

CAP 168 Licensing of Aerodromes

In "CAP 168 Chapter 4" The Assessment and Treatment of Obstacles", the CAA has outlined the principles of Safeguarding.

"INTRODUCTION

The effective utilisation of an aerodrome may be considerably influenced by natural features and man-made constructions inside and outside its boundary. These may result in limitations on the distance available for take-off and landing and on the range of meteorological conditions in which take-off and landing can be undertaken. For these reasons certain areas of the local air space must be regarded as integral parts of the aerodrome environment. The degree of freedom from obstacles in these areas is as important in the granting and retention of an aerodrome licence as the more obvious physical requirements of the runways and their associated runway strips, and is determined by survey in accordance with CAP 232 – Aerodrome Survey Requirements.

The method of assessing the significance of any existing or proposed object within the aerodrome boundary or in the vicinity of the aerodrome is to establish defined obstacle limitation surfaces particular to a runway and its intended use. The purpose of this chapter is to define these obstacle limitation surfaces and their characteristics and describe the action to be taken in respect of objects which infringe them. These surfaces are illustrated at Figure 4.11. In ideal circumstances all the surfaces will be free from obstacles but when a surface is infringed, any safety measures required by the CAA will have regard to:

(a) the nature of the obstacle and its location relative to the surface origin, to the extended centreline of the runway or normal approach and departure paths and to existing obstructions;

(b) the amount by which the surface is infringed

- (c) the gradient presented by the obstacle to the surface origin;*
- (d) the volume and type of air traffic at the aerodrome; and*
- (e) the instrument approach procedures published for the aerodrome.*

Safety measures could be as follows:

- (a) promulgation in the UK AIP of appropriate information;*
- (b) marking and/or lighting of the obstacle;*
- (c) variation of the runway distances declared as available;*
- (d) limitation of the use of the runway to visual approaches only;*
- (e) restrictions on the type or amount of traffic.”*

In addition to the requirements described in this chapter, it may be necessary to call for other restrictions to Proposed Development on and in the vicinity of the aerodrome in order to protect the performance of visual and electronic aids to navigation and to ensure that such Proposed Development does not adversely affect instrument approach procedures and the associated obstacle clearance limits.

The reference to Fig 4.11 in CAP168 gives a technical description of the protected surfaces.

Restriction & Removal of Obstacles

CAP 168 Chapter 4 Section 9 outlines the advice on the restriction and removal of obstacles. It states that no object should penetrate protected surfaces except where it is either shielded by an existing object or is, in the opinion of the relevant authority, not adversely affecting the safety or regularity of aircraft operations.

Shielding

The concept of shielding as described in Chapter 4 Section 10 of CAP 168 refers to dominant obstacles which may shadow lesser objects within defined parameters. Where applicable the application of shadowing will be applied in this report.

CAP 232 Aerodrome Survey Requirements

The purpose of CAP 232 is to provide data required by the CAA to enable it to:

- Consider aerodrome licensing issues;
- Design and develop operational flight procedures;
- Prepare charts; and
- Conduct safety evaluations.

This document sets out which obstacles are to be noted and surveyed. The obstacles included in this section range from terrain to vegetation and structures. Specific reference is made to Section 3.6.3 and 3.6.5, which call attention to the fact that the highest point on an obstacle may not necessarily be the most significant part of that obstacle.

One of the main thrusts of CAP 232 is the Aerodrome Plan (legal working document), which is used to give an accurate picture of the aerodrome and its physical operating environment. Chapter 7 of CAP 232 is concerned with the AGA Survey which states all relevant obstacle limitation surfaces (OLS) which are to be included in the aerodrome survey.

Particular reference is made in regard to the Proposed Development of the ICAO Type A chart in Chapter 8, which provide the necessary information for aircraft operators to comply with other ICAO operating requirements. The TOFP determines the area to be surveyed, which extends to a distance of 15km and is 3.9km at its widest point. The requirement of the TOFP is that any and all obstacles which breach this surface shall be comprehensively analysed.

CAP 738 Safeguarding of Aerodromes

As stated in CAP 738, “The purpose of this document is to offer guidance to those responsible for the safe operation of an aerodrome or technical site, to help them assess what impact a Proposed Development or construction might have on that operation”. This document takes into account the guidance and advice in CAP 738.

Planning Policy Context

The following sets out the planning policy relevant to the Proposed Development of tall structures near airports.

Office of the Deputy Prime Minister (ODPM) Circular 1/2003

The key Government direction of relevance to the Proposed Development with respect to aviation is the Office of the Deputy Prime Minister (ODPM) Circular 1/2003 (Ref. 11-1), effective 10th February 2003, and marks a shift in the responsibility of safeguarding operations and procedures at aerodromes (airports). This transfers responsibility to aerodrome operators from the Civil Aviation Authority (CAA), with the CAA now operating as a regulator, auditing the effectiveness of safeguarding measures.

Under the Circular, the Local Planning Authority is responsible for the provision of sufficient information to enable a safeguarded aerodrome to appropriately consider the potential impacts of developments. Such information should include, as a minimum, a six figure Ordnance Survey (OS) Grid Reference, site elevation relative to Ordnance Datum and the layout, dimensions and heights of buildings or works to which the planning application relates. During a 21-day consultation period following an application for planning permission to develop land covered by a safeguarding map, the aerodrome will consider whether, due to the location or the nature of such Proposed Development, it is necessary to advise against the Proposed Development or to seek restrictions on the height or design because of a conflict with aircraft operations.

It should be noted that, even if a development is of a height that necessitates consultation, it does not automatically mean that it will infringe a protected surface. Nor is it necessary for new buildings to be automatically restricted to certain maximum heights in safeguarded areas.

3. Proposed Development

The Site

Site Location

The site sits at the western end of an area known as the Royal Docks. The Site is bounded by the River Thames on the south-western side, Silvertown Way on the north-eastern side, Lower Lea crossing to the north and Bell Lane to the south-east.

The aviation assessment is required as the development is located in an area highlighted on the airport safeguarding map which is lodged with the local planning authority and can be found on London City Airport's website under community engagement.

The figure below shows the location of the site.

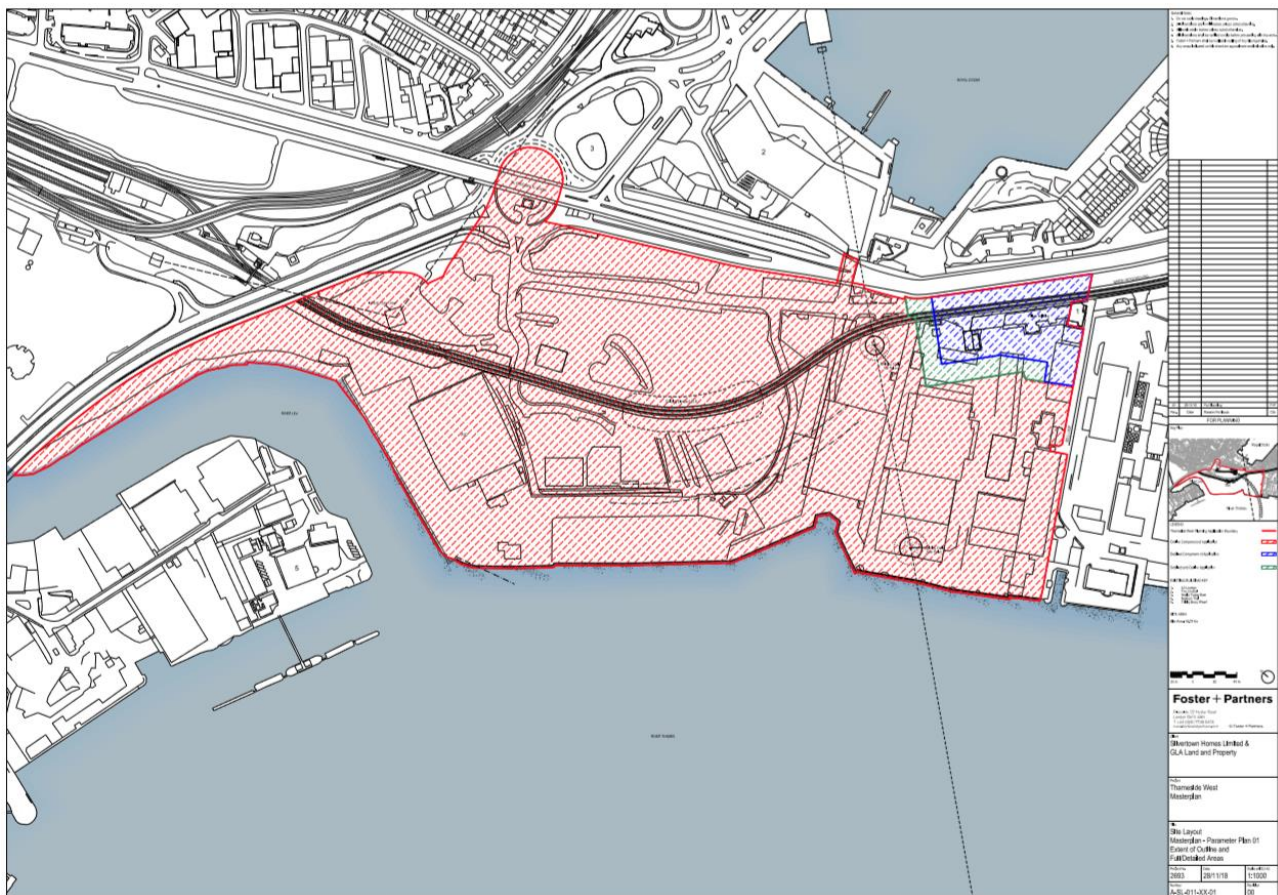

Figure 1 Thameside West Site Plan

The figure below sets out the referencing for each block of buildings.

The figure below is an enlargement of the above with indicative spot heights of the buildings for reference.

The figure below sets out the relative location of the Proposed Development to London City Airport.

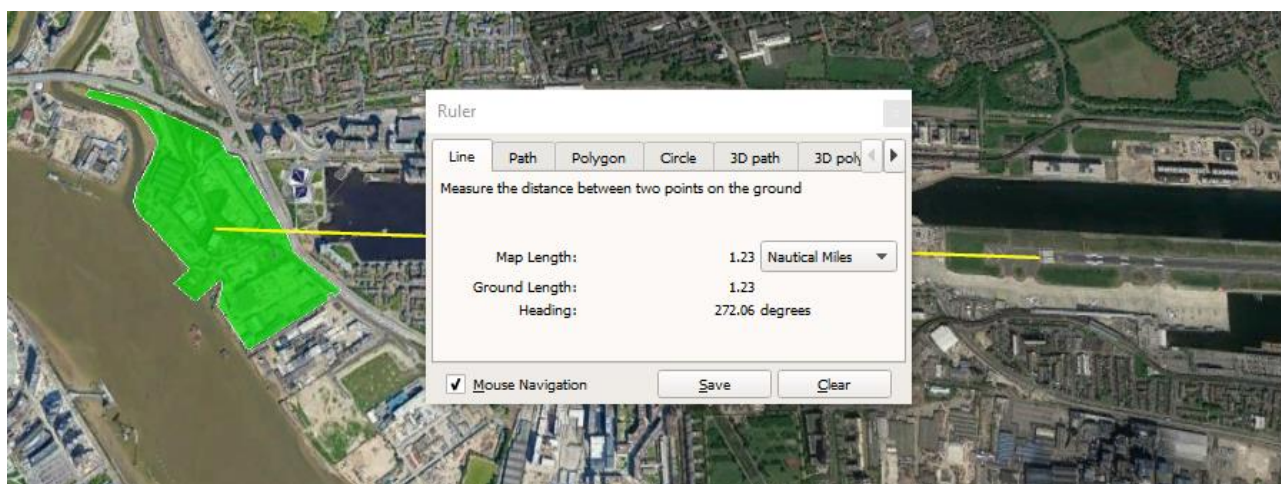

Figure 3 Thameside West Site Location relative to LCY

Figure 4 Thameside West Location Context

The following image sets out the phasing of the scheme with Phase 1 being the detailed application where the rest of the phases are submitted as an outline planning application.

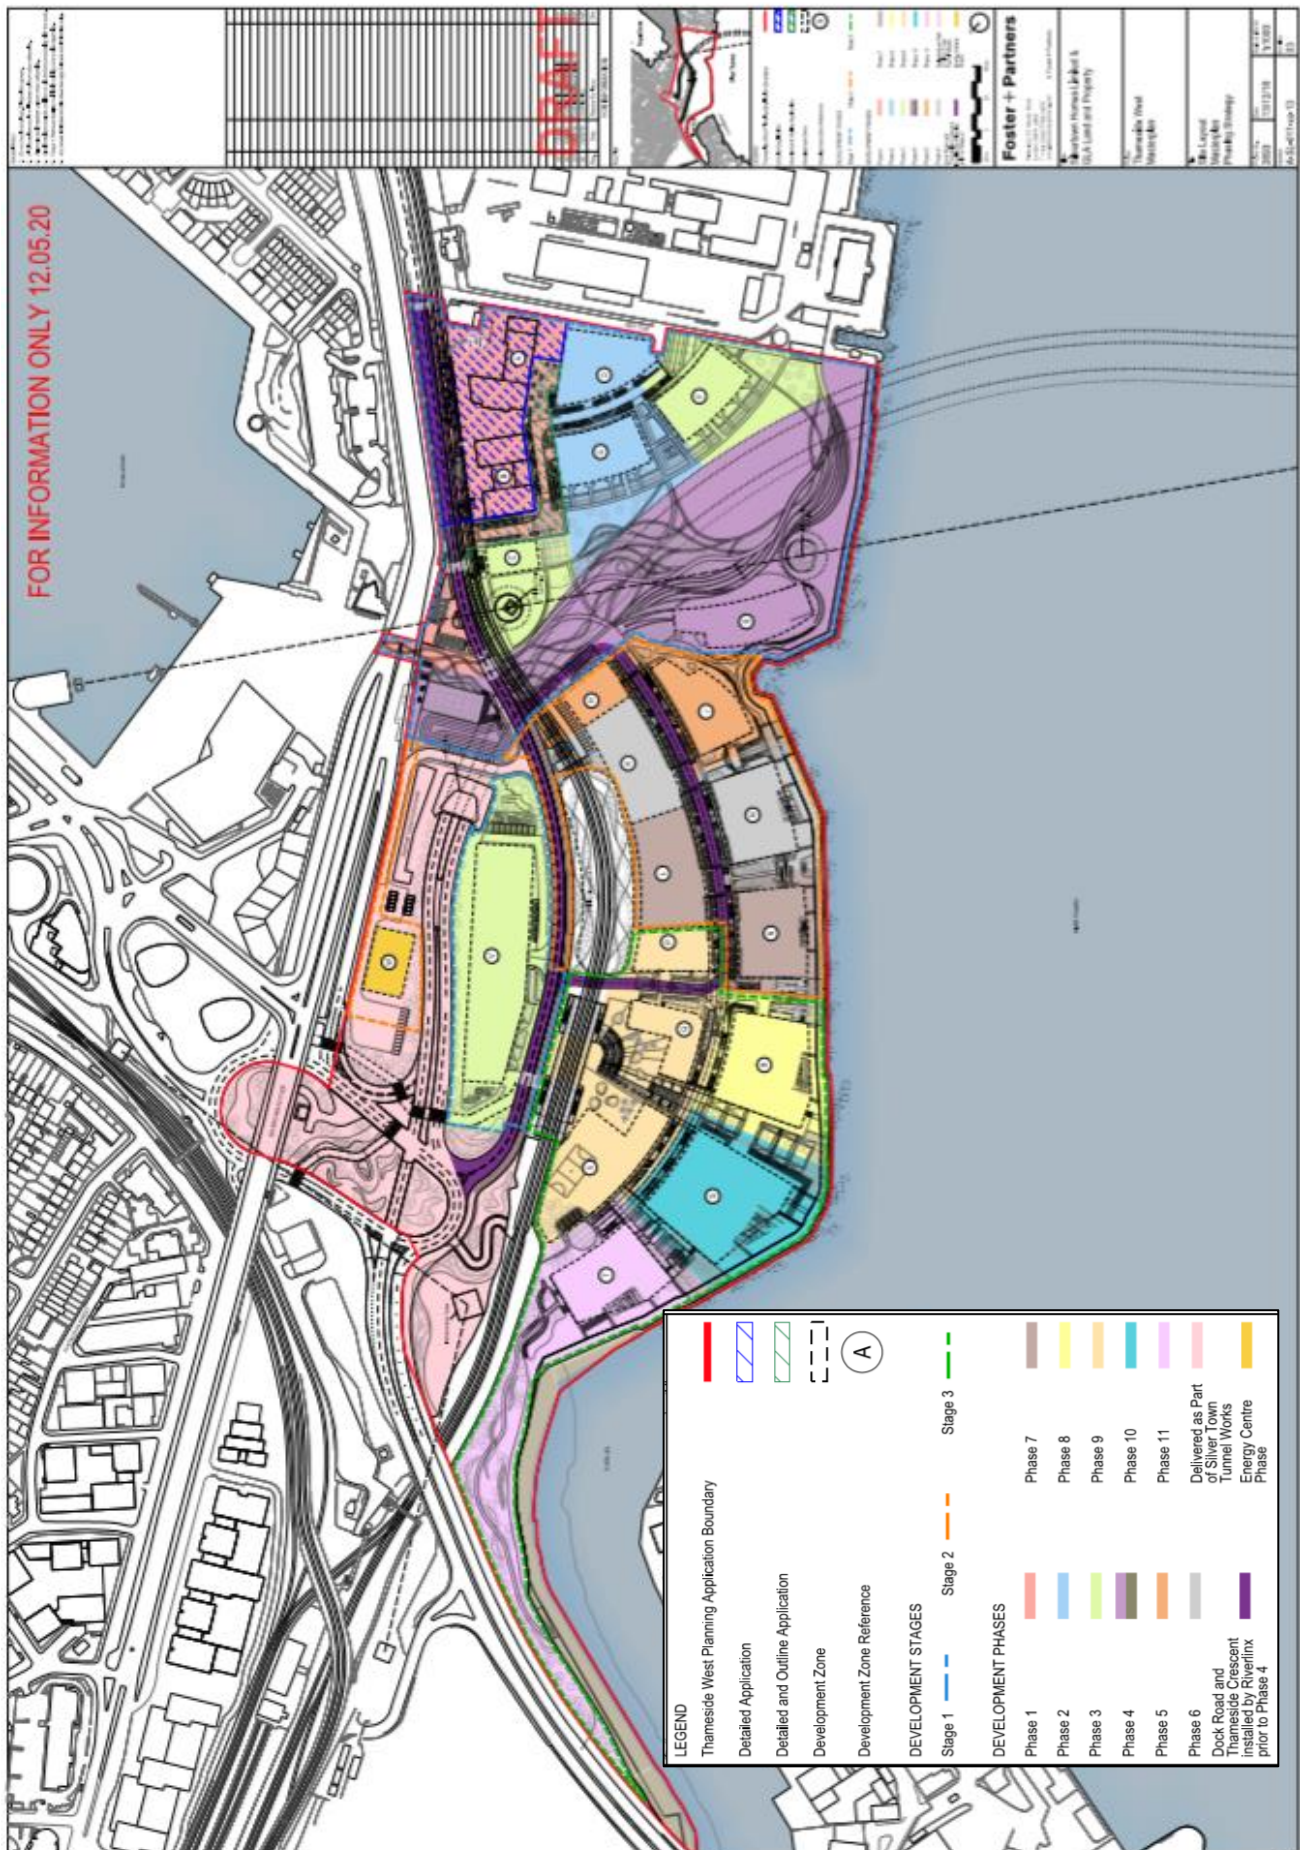

Figure 5 Thameside West Phasing

4. Assessment Methodologies

This section of the report describes the methodology to be used in assessing the Physical, Technical and Operational Safeguarding processes.

4.1. Physical Safeguarding Methodology

Physical Safeguarding is initially achieved by establishing a series of Obstacle Limitation Surfaces that define the limits to which objects may project into the surrounding airspace.

The methodology used in the production of this report with regard to Physical Safeguarding comprises the following process:

1. Establish the location and height (m AOD) of the Proposed Development relative to the airport.
2. Determine the most relevant set of points on the Proposed Development in relation to safeguarding. This is done utilising a 3D model of the proposed development and the relevant safeguarding surface by identifying the point on the structure which is closest to the relevant surface.
3. Determine the angle created between the relevant edge of the building and the relevant runway threshold of the airport.
4. Determine the relationship between the Proposed Development and the various assessment and limitation surfaces.
5. Establish if the Proposed Development breaches any of the assessment or limitation surfaces. If a breach is identified, calculate by how much it is breached. If the relevant surface is not breached, determine the clearance from that surface.
6. Calculate the relative distance from the approach path, departure path and missed approach path (theoretical with reasoned tolerances) from the relevant runways.
7. Establish the minimum required distance from the approach path, departure path and missed approach path as per the relevant documentation and identify.
8. Determine if there are any overshadowing Proposed Developments in the vicinity of the Proposed Development, which may interact with the Proposed Development.
9. Determine the shadowing effect of the Proposed Development.
10. Determine any mitigation which may be required.

4.2. Technical Safeguarding Methodology

Technical Safeguarding is concerned with the Communications, Navigation and Surveillance (CNS) equipment at the airport. Specifically, the methodology used looks at the potential impact on the following systems:

- Instrument Landing System (ILS)
- Distance Measuring Equipment (DME)
- Non Directional Beacon (NDB)
- Precision Approach Path Indicator (PAPI)
- Meteorological Sensing Equipment
- Radio Communications Equipment

The methodology used in this report is listed below:

1. Establish the location and height (m AOD) of the Proposed Development relative to the airport.
2. Determine the angle created between the relevant edge of the building and the relevant CNS equipment.

3. Establish if there may be a line of sight from the ILS, DME or NDB to the Proposed Development.
4. If there is a possible line of sight to the CNS equipment, determine if radio emissions from that equipment may be reflected off the Proposed Development.
5. If there are potential reflections from the Proposed Development, determine the nature and significance of the reflections with relation to the approach path for the relevant runway.
6. If reflections are directed towards the flight path, seek advice from the National Air Traffic Services as to the significance of the reflections.

4.3. Operational Safeguarding Methodology

Operational Safeguarding is split into two specific areas. The first addresses the operations of aircraft into and out of the airport. This is in regard to the procedures and relative location of the aircraft in relation to the Proposed Development. The second area addresses the terms of future aircraft operations at the airport looking at trends in aviation Proposed Development.

The methodology used in the production of this report is set out below.

Aircraft Operational Procedures

Identify the vertical, horizontal and slope distance from the nominal flight path to the most relevant surface of the building. In this instance Swanson Aviation Consultancy is not a registered instrument flight procedure company as required by the CAA. The information provided is aimed at assisting the airport's designated assessor information to facilitate an assessment.

Obstruction Lighting

With reference to CAP168 Chapter 4, the guidance for the application of obstruction lighting is applied to the Proposed Development. Where appropriate, opportunities to reduce the 'sea of red' light effect are proposed.

Birds

Reference is to be made to the landscaping strategy for the Proposed Development.

Cranes

The use of cranes during construction can be a significant issue to airports and as such is of great importance to the airport. A separate study has been undertaken to address the use of cranes.

5. Physical Safeguarding Assessment

In this context, Physical Safeguarding concerns the obstacle limitation surfaces as set out in 'SAFEGUARDED AND OBSTACLE LIMITATION SURFACES – LONDON CITY AIRPORT', supplied by LCY and produced by Aerodrome Standards Department, Safety Regulation Group of the UK CAA.

Our assessment shows that the Proposed Development is located under Approach and Take Off Climb surface with the latter being the more limiting surface.

The image below illustrates the relative location of the Proposed Development relative to the safeguarding surfaces for London City Airport.

Figure 6 Thameside West Location

The Proposed Development was designed to sit beneath the safeguarding surfaces for LCY.

5.1. Detailed Assessment

The approach to analysis was to identify the two most critical parts of the development that were closest to the Take-off Climb Surface. Using a 3-dimensional AutoCAD model provided by the client a naming system was devised to identify the relevant parts of the buildings for analysis by phase.

The following set of images illustrate the various assessment points by project phase.

Phase	Bld	Position	Point	Ref	Easting	Northing	Height m (AOD)

Table 3 Phase 1 Building A Detailed Assessment

5.2. Findings

The Proposed Development does not infringe the Take-off Climb surface for LCY.

6. Technical Safeguarding Assessment

6.1. Instrument Landing System

Technical safeguarding is in reference to the various navigational aids in operation at the airport. The following is taken from the executive summary of the first NATS assessment that confirmed there were no material issues associated with the proposed development.

2. Executive Summary

2.1. Introduction

Swanson Aviation Limited has contracted NATS to conduct a technical safeguarding assessment for the possible impact of the Thames Side West development on the London City Airport navigation facilities.

Runway 09 Localiser

The proposed complete development and individual buildings have the potential to disturb the localiser course structure; the impact would only be only be slight and would have no operational impact.

Runway 09 Glide Path

The proposed complete development and individual buildings have the potential to disturb the glide path course structure; the impact would only be only be slight and would have no operational impact.

Runway 27 Localiser

The proposed development is located behind the localiser and away from the direction of the radiated signal; as such the development will not impact the localiser.

Runway 27 Glide Path

The proposed development is located behind the glide path and away from the direction of the radiated signal; as such the development will not impact the glide path.

2.2. Distance Measuring Equipment (DME)

The proposed development will not significantly impact the DME.

With the scheme being slightly re-designed subsequent discussions with NATS indicated that it is unlikely that the changes would alter their findings but that it would be appropriate to assess the revise scheme. At the time of writing of this report a revised assessment was not available. It was agreed that any additional analysis could be completed post submission and dealt with as a condition from London City Airport.

The likely process is that upon receipt of the planning application LCY would refer the scheme to NATS as the operator of the ILS system to determine if any additional analysis needs to be undertaken. Should additional analysis be required NATS would undertake this work in agreement with the London City Airport and the applicant.

6.2. LHR10 Radar

The Heathrow Airport 10cm radar (LHR10) is used to give guidance to aircraft approaching the Heathrow airport from the east and is a key piece of surveillance equipment for both Heathrow and LCY. Given sensitivities with the LHR 10cm Radar, we have provided an initial assessment of the likelihood of a

potential interaction with the radar. The following images illustrate the relative relationship between the Proposed Development and the LHR10 radar.

Figure 12 LHR10 Radar and the Proposed Development Site

The image above is illustrative of the affected radar beam which passes over the site. In this case based on previous interaction with NATS we increase the width of affected area by 2 degrees on either side of the Proposed Development to account for the way in which the radar waves propagate around a development.

In this case the Proposed Development benefits from being in the shadow of other developments both existing and consented developments.

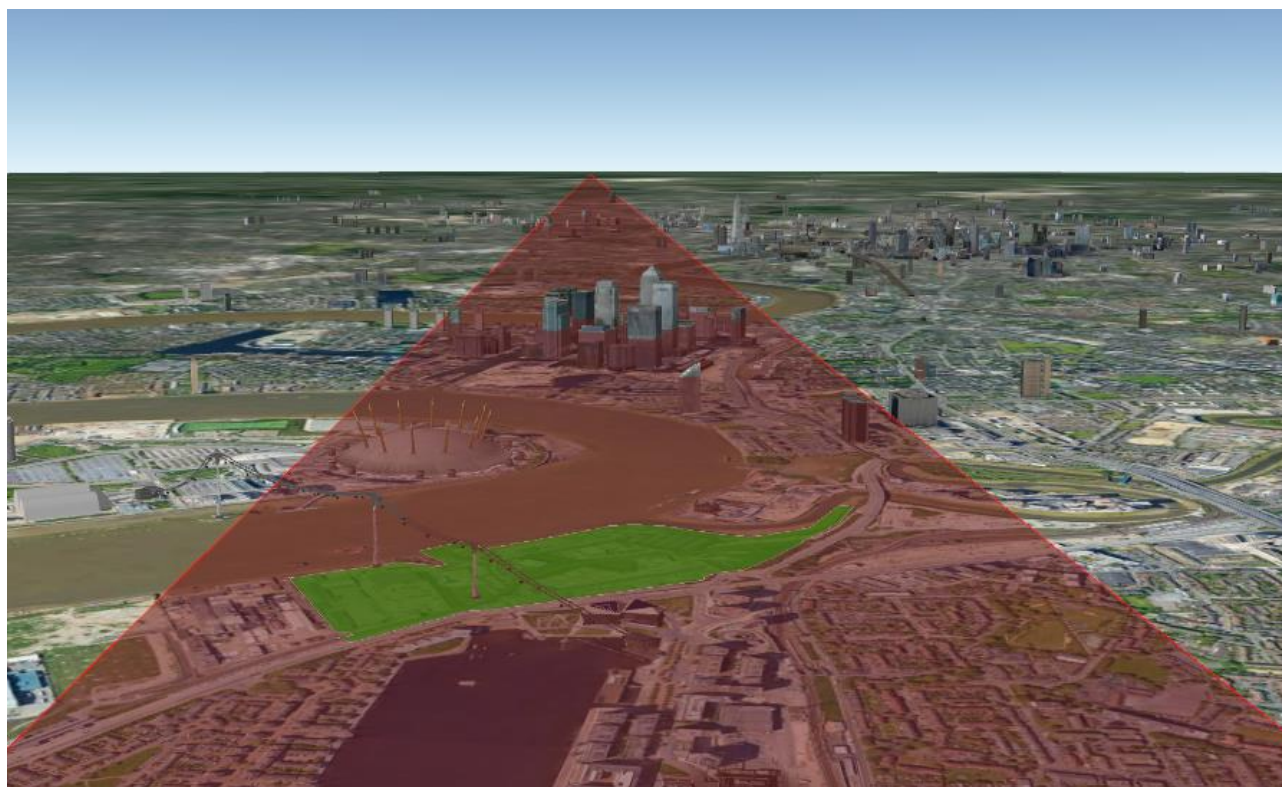

Figure 13 LHR 10cm Radar and the built environment

Based on our analysis of the relative location of the Proposed Development in the context of the built environment in greater London, it is likely that the Proposed Development will sit in the shadow of other buildings both existing and consented and is therefore unlikely to affect its operation. This has been confirmed through an email exchange with NATS with the response reproduced below.

Figure 14 Email confirmation from NATS re H10 Radar

6.3. Key Findings

1. **LCY Navigation Aids** - It is unlikely that the Proposed Development will impact on the operation of the navigation aids based at LCY but that additional checks from NATS will be required which can be dealt with post submission through a condition.
2. **LHR10 Radar** – It is unlikely that the Proposed Development will have any operational impact on the LHR10 radar as the site is effectively in an operational shadow created by the built environment in the City of London.

7. Operational Safeguarding

7.1. Flight Procedures

A separate instrument flight procedure analysis is being undertaken by another consultant as an independent study.

7.2. Obstruction Lighting

With reference to CAP168 and EASA regulations, an assessment of the Proposed Development indicates that low intensity obstruction lighting should be applied to the Proposed Development.

The following outlines the proposed lighting solution.

1. **Top Lights** – Medium intensity obstacle lights be located at the tops of the taller buildings as per the schedule to outline the limits of the development. Consideration is given to the phasing of the delivery of the plan to ensure that sufficient lights are visible at all phases of development.
2. **1st Level** – The next level of lights where necessary will be a maximum of 52m below the top light. Where the face of the building faces the Thames directly low intensity lights will be provided. It is not proposed to include middle level lights between the western and eastern set of buildings. Mid-level lights will be provided on the eastern sides of buildings where required for buildings adjacent to the Royal Docks to increase conspicuousness of the Proposed development. Where possible for aesthetic purposes the mid-level lights on the taller structures are provided at the same level to increase the visibility of the overall form of the development.
3. **Phasing** – As the scheme is developed it may be necessary to include additional mid-level lights to ensure compliance with the requirements between phases. As adjacent phases are developed superfluous obstruction lights would be removed so as to not necessarily illuminate adjacent buildings with red light.

The following image highlights the relative location of the obstruction lights for the Proposed Development which applies best practice but also seeks to minimise the ‘sea of red lights’ effect.

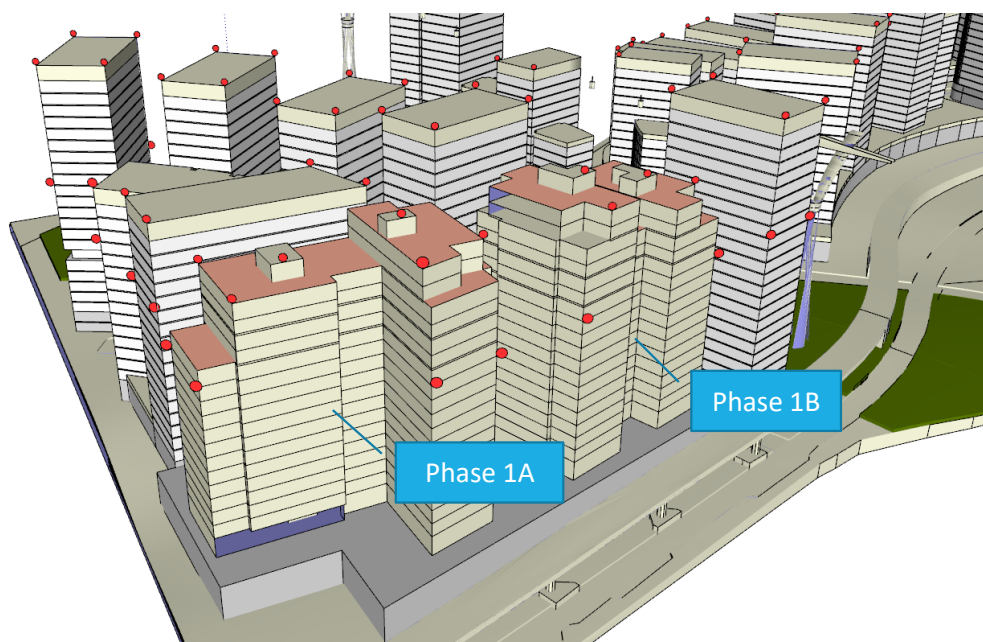

Figure 15 Indicative Obstruction Light Position

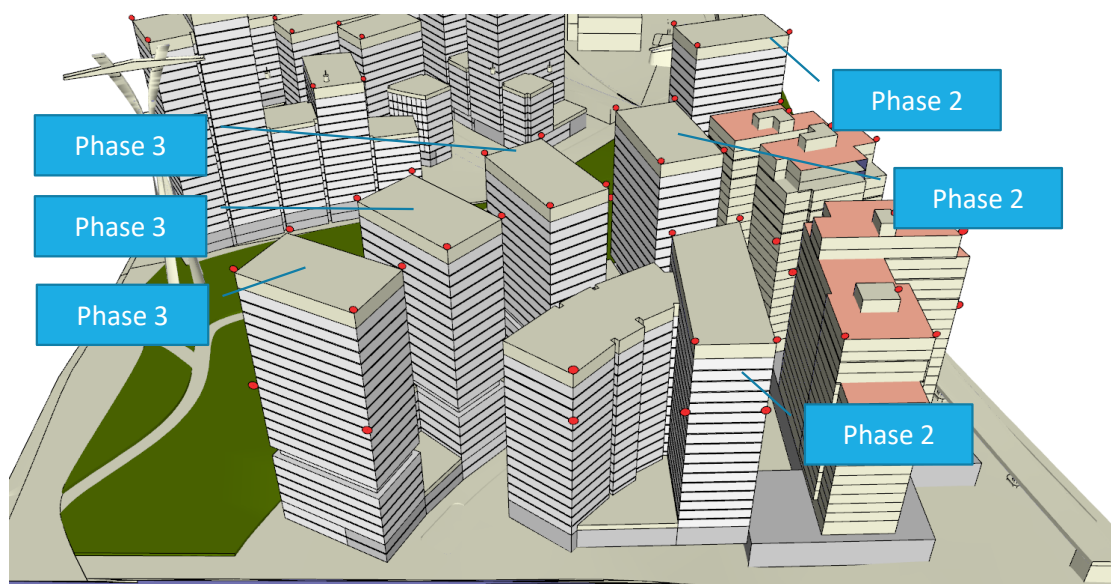

Figure 16 Indicative Obstruction Lighting Plan Phase 2

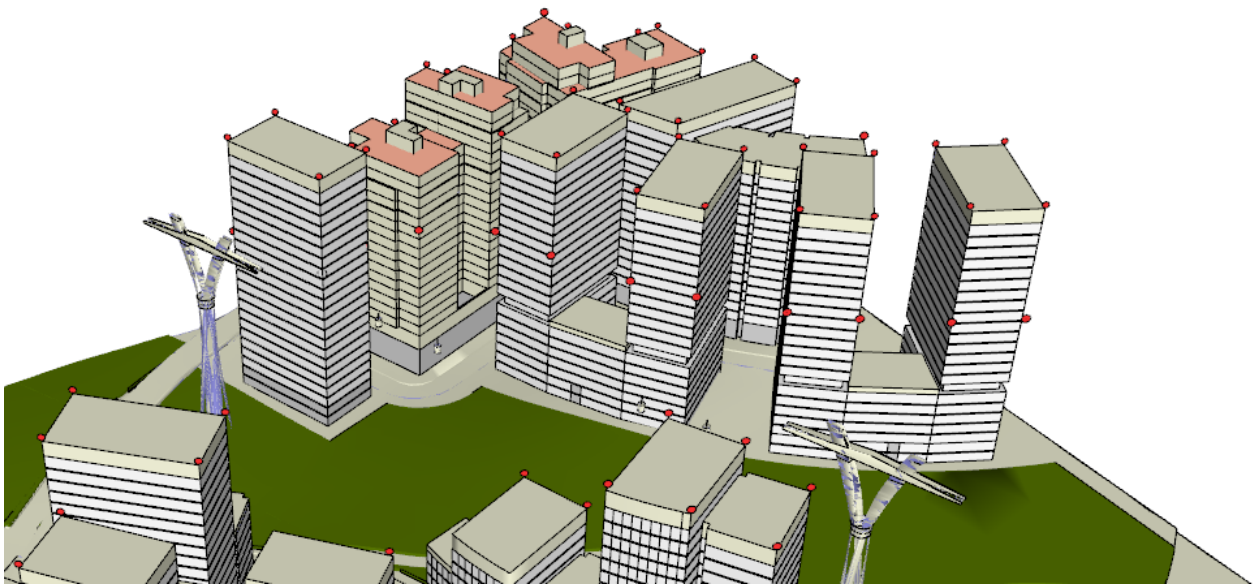

Figure 17 Phase 1-3 Obstruction Lighting Scheme

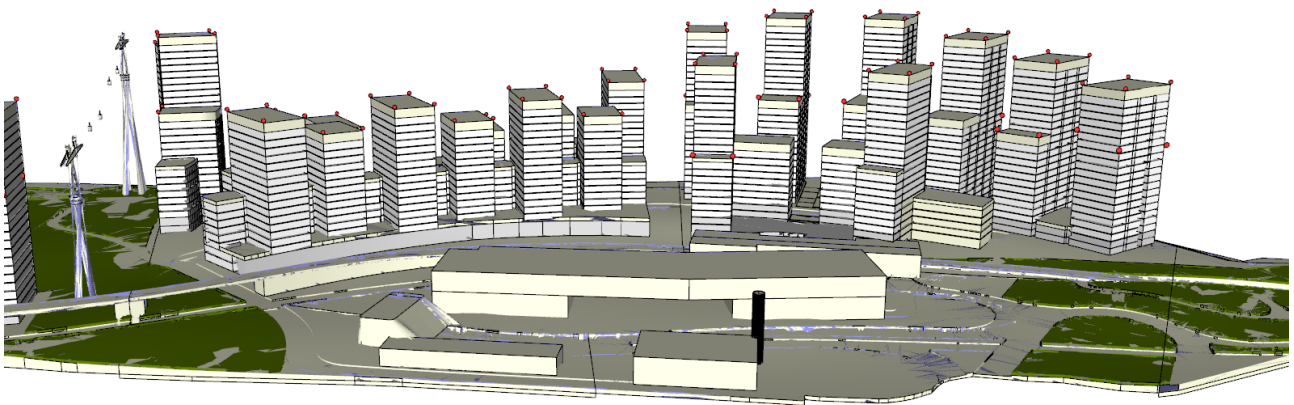

Figure 18 Obstruction Lighting Proposal West Face

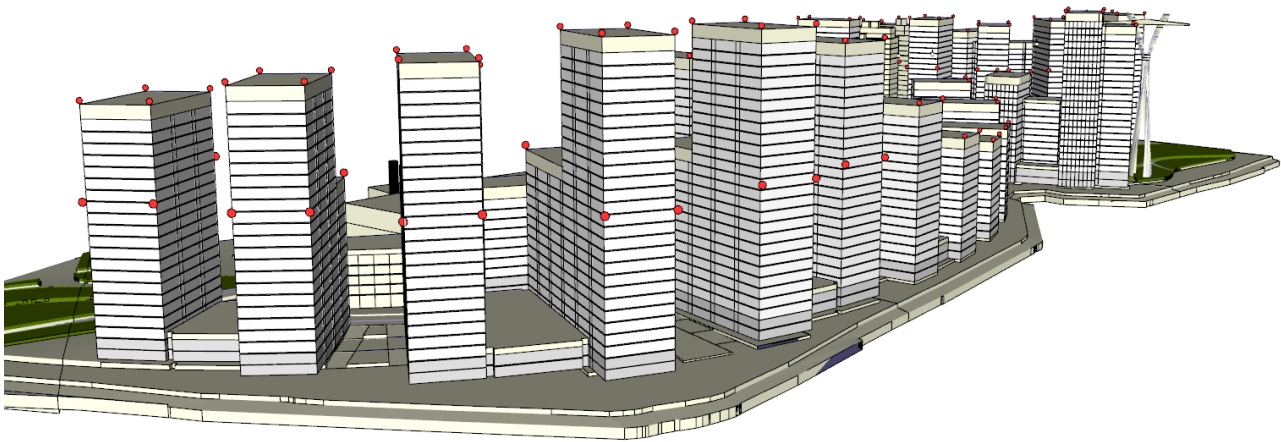

Figure 19 Obstruction Lighting Proposal North East Face

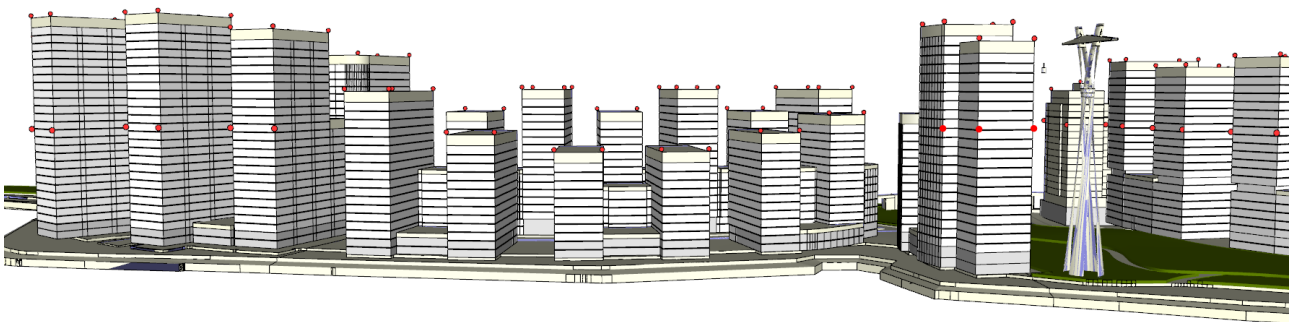

Figure 20 Obstruction Lighting Proposal East Face

Given the fact that the Proposed Development will be lit by both interior and exterior lighting during hours of darkness, it is reasonable to suggest that some of the obstruction lights can be omitted to avoid the 'sea of red lights' effect. For reference the sea of red lights effect occurs when the requirement for obstruction lighting produces the effect of too many lights such that individual buildings become indistinguishable among a 'sea of red lights'.

7.3. Bird Management

Given the size of the overall proposed development a separate bird hazard management report has been produced to address the issues of birds and the site which can be found in the planning submission documents. The following is taken from the executive summary of the Aviare report with the full document found in the planning application.

“Likelihood of elevation in wildlife hazard risk levels for each critical flight zone

Ten different catalysts were identified for likely elevation in bird strike risks across the London City Airport 13km safeguarded zone. If these catalysts remain unchecked the on-site population numbers for the species of concern, and their occurrence rate along bird flight paths through the critical flight zones for aircraft using London City Airport will increase.

It is therefore necessary to put in place a mitigation action plan to prevent these elevations from occurring.

Mitigation action plan to be adopted

The mitigation action plan will be a robust wildlife hazard management plan.

A TSW Wildlife Hazard Management Plan is being developed to support the detailed application which will be implemented in full once planning permission has been received.

The Wildlife Hazard Management Plan will cover all works within the TSW project from the start of activity on site for demolition and construction, to beyond practical completion and the in-use phases of the site.

It has been agreed with London City Airport that the wildlife hazard management plan will be a conditioned submission. The airport has also agreed to review the wildlife hazard management plan and sign it off as an approved document prior to the plan being submitted to the local planning authority.

With each further development of the TSW project the wildlife hazard management plan will be reviewed and refreshed to reflect any additionally actions required to maintain mitigation of elevations in wildlife hazard risks for London City Airport.

The wildlife hazard management plan will also be reviewed following any reported possibly related bird strike or near miss for aircraft using London City Airport.”

7.4. Use of Cranes during Construction

At the time of writing of this report there was no construction methodology available for inclusion in this report. It is however worth noting that each of the buildings provides clearance between the top of the building and the Take-off Climb surface to allow construction to take place without needing to infringe the surface. In some cases, the clearance may not allow traditional methods of construction however previous experience indicates that a dual construction method can be employed to allow its construction. In this method the lower portion of the development is built using traditional methods and the top portion of the building is erected as a prefabricated construction. This method allows the use of spider cranes at the top of the building without penetrating the relevant safeguarding surface. Subsequently a relevant condition has been agreed with London City Airport regarding an agreement of a construction methodology

statement which would need to be agreed before construction could begin. The developer in this case remains committed to working with the airport to close out the condition.

Proposed Condition Wording:

“No cranes or scaffolding shall be erected on the site unless and until construction methodology and diagrams clearly presenting the location, maximum operating height, radius and start/finish dates for the use of cranes during the Development has been submitted to and approved by the Local Planning Authority, the Local Planning Authority having consulted London City Airport. It should be noted that no construction equipment shall be permitted to infringe any Instrument Flight Procedures or critical obstacle limitation surfaces.

Reason: To safeguard London City Airport’s flight operations”

7.5. Façade Access Strategy

At the time of writing of this report there was no available façade access strategy available for inclusion in this report. What is to be noted is that no portion of the Building Management Unit will penetrate the safeguarding surfaces during its normal operation. In this case a suitable condition can be agreed to present the solution at a later date.

7.6. Key Findings

Flight Procedures – Our review finds that the Proposed Development is unlikely to impact on any Approach or Departure procedures.

Obstruction Lighting – A largely compliant obstruction lighting solution is proposed but given the fact that the Proposed Development will be well lit during hours of darkness it is proposed that some obstruction lights could be omitted to minimise the ‘sea of red’ effect. The lighting solution will be developed during the detailed design stage and agreed with LCY.

Bird Management – Reference is to be made to the separate Wildlife Hazard Management Plan.

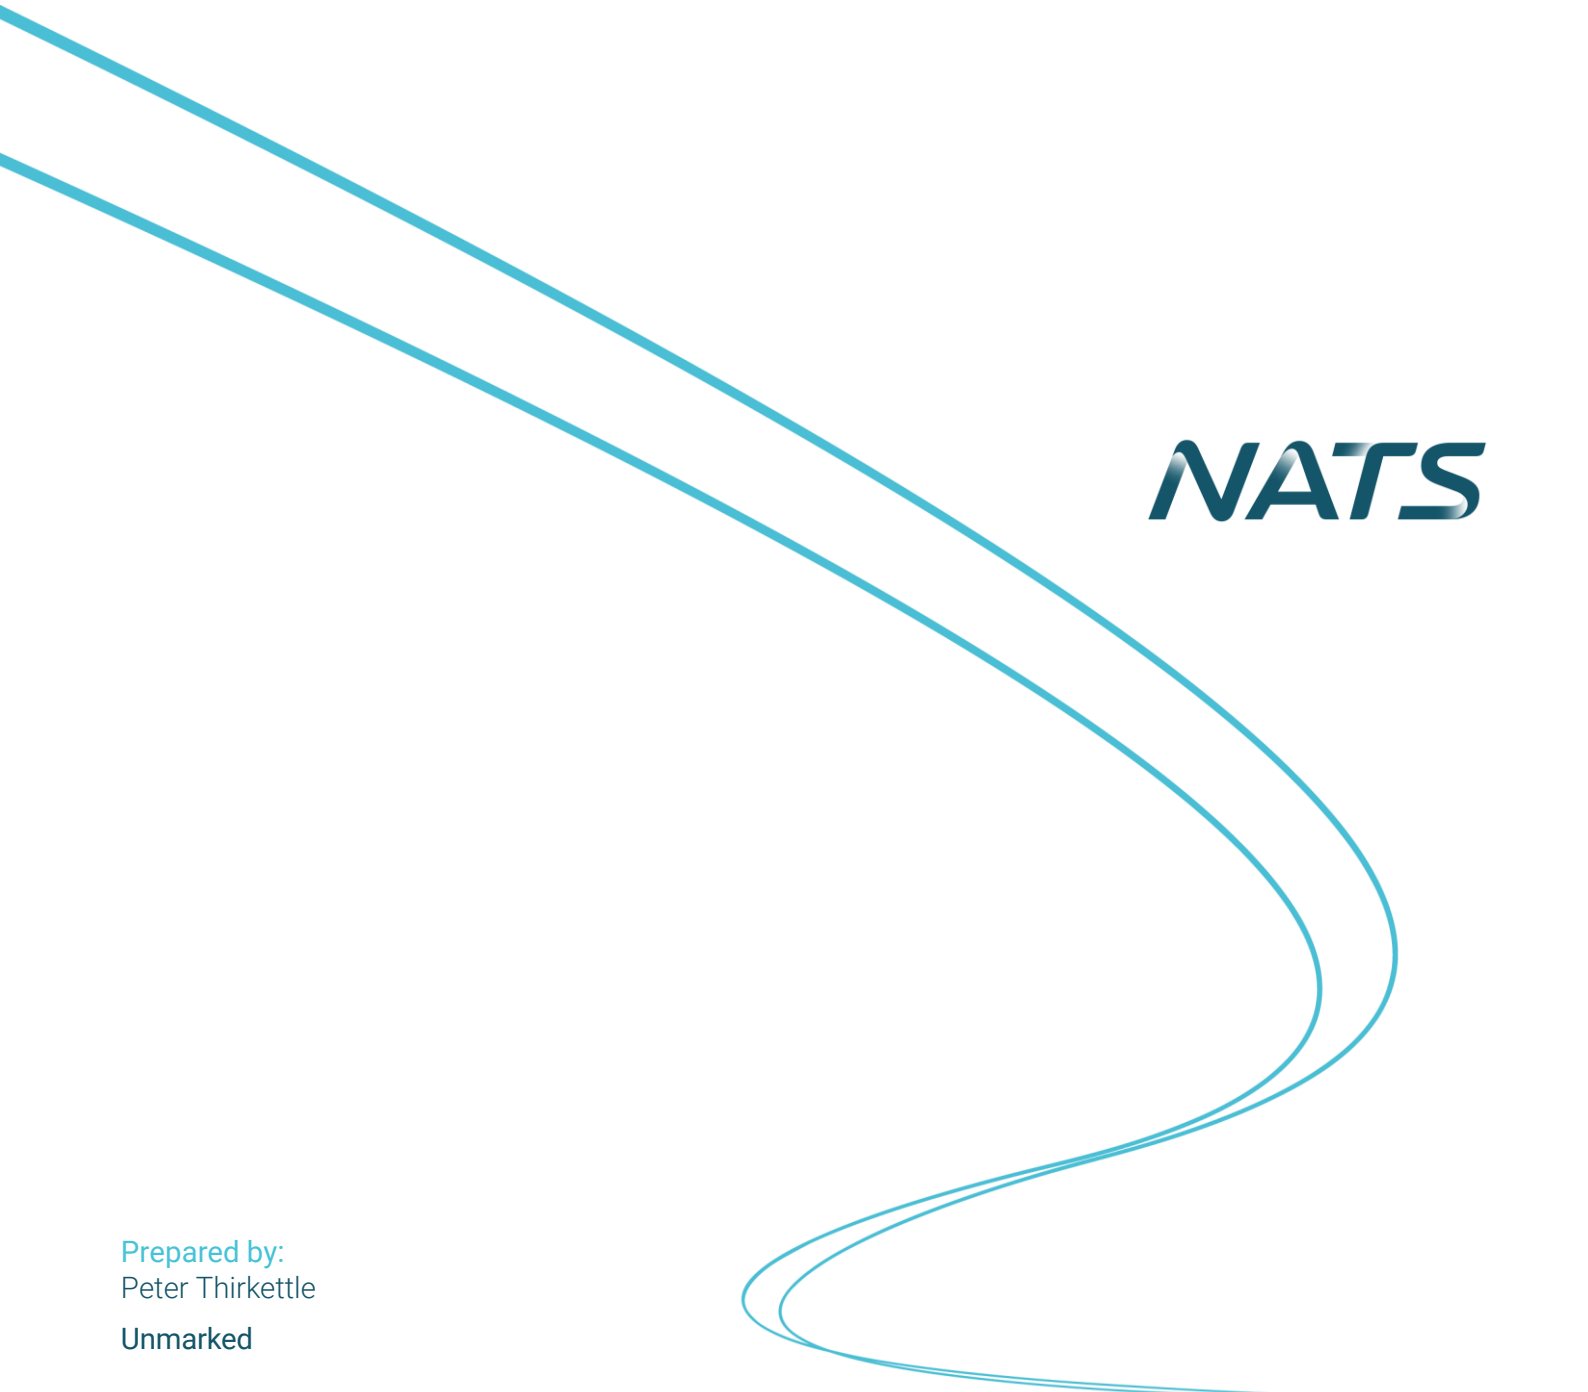

Use of Cranes – At the time of writing of this report there was no construction methodology available for inclusion in this report. It is however worth noting that each of the buildings provide sufficient clearance between the top of the building and the Take-off Climb surface to allow construction to take place without needing to infringe the surface. The developer in this respect has agreed a relevant condition and remains committed to working with the airport to resolve the condition.

Façade Access Strategy – The proposed façade access strategy will not require the penetration of the Take Off Climb Surface.

2. Executive Summary

2.1. Introduction

Swanson Aviation Limited has contracted NATS to conduct a technical safeguarding assessment for the possible impact of the Thames Side West development on the London City Airport navigation facilities.

Runway 09 Localiser

The proposed complete development and individual buildings have the potential to disturb the localiser course structure; the impact would only be only be slight and would have no operational impact.

Runway 09 Glide Path

The proposed complete development and individual buildings have the potential to disturb the glide path course structure; the impact would only be only be slight and would have no operational impact.

Runway 27 Localiser

The proposed development is located behind the localiser and away from the direction of the radiated signal; as such the development will not impact the localiser.

Runway 27 Glide Path

The proposed development is located behind the glide path and away from the direction of the radiated signal; as such the development will not impact the glide path.

2.2. Distance Measuring Equipment (DME)

The proposed development will not significantly impact the DME.

3. Introduction

3.1. Contract

Swanson Aviation Limited has contracted NATS (Contract Number 3035-xx-6054) to conduct a technical safeguarding assessment for the possible impact of the Thames Side West development on the London City Airport navigation facilities.

3.2. Development Details

Figure 1 shows an AutoCAD drawing of the proposed development.

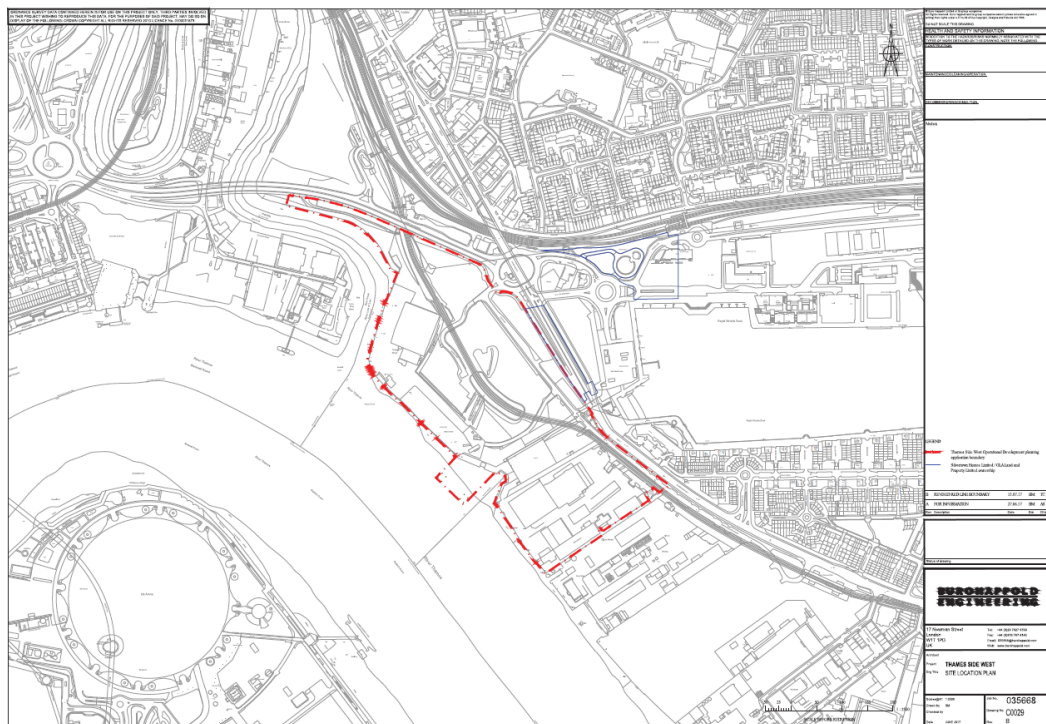

Figure 1: Site Location for Thames Side West

The customer has provided the latest drawing via E-mail (dated 5th November 2018) of the development of the proposed development. The drawing was in AutoCAD format (file name 181105_a-mp-m-xx-sl.dwg). The maximum building height is 97.9m. A screenshot of the AutoCAD drawing is shown in Figure 2.

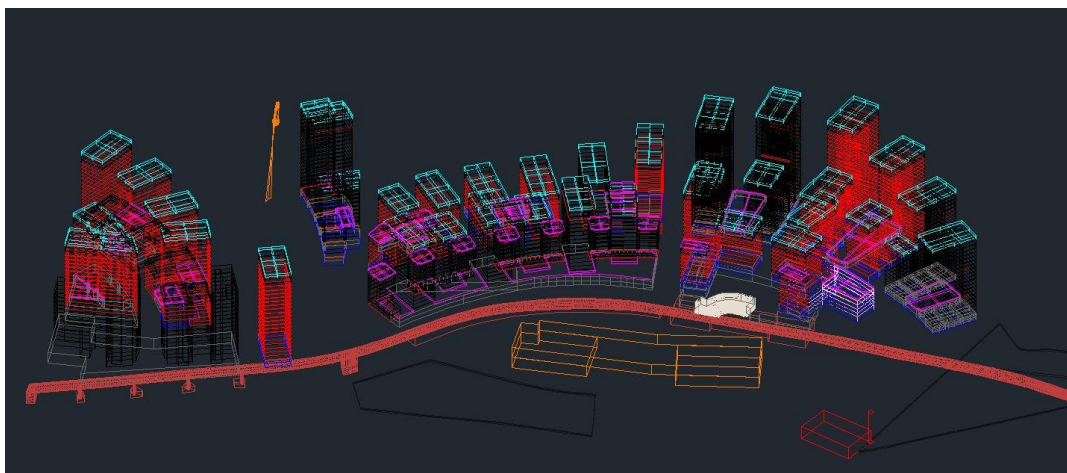

Figure 2: 3D view of Thames Side West.

4. Navigational Aid Assessment

4.1. ILS Procedures

London City Airport Ltd has instrument approach charts as detailed in Table 1 and Table 2 supported by ILS as promulgated in the UK AIP:

Runway 09

AD 2- EGLC -8-5	Instrument Approach Chart LONDON/City LOC/DME/NDB(L) RWY27 (Acft Cat A,B,C) – ICAO	NA	5.5°

Table 2: Runway 27 Instrument Approach Charts

4.2. ILS System Configuration

The ILS modelling tool requires certain system configuration data, the modelled localiser and glide path data is provided in Table 3 and Table 4.

Runway 09 Localiser	
Array Type	NORMARC NM3524 – 12 Element two frequency
Frequency	111.150 MHz
Runway Length	1335 m
Array Set Back	177 m
Course Width	5.7°

Table 3: Modelling tool localiser configuration data runway 09

Runway 09 Glide Path	
Array Type	M-Array
Frequency	331.5 MHz
Antenna Set Back	111m
Main Offset	60 m
Course Width	1.32°

Table 4: Modelling tool glide path configuration data runway 09

4.3. Impact on Instrument Landing Systems

4.3.1. Runway 09 Localiser

The closest part of the proposed development is located approximately 2000m from runway 09 threshold. Due to the height of the buildings interference to the localiser signal in space may be experienced; as such predictive performance modelling is considered necessary and has been conducted as per section 4.5.

4.3.2. Runway 09 Glide Path

The closest part of the proposed development is located approximately 2000m from the runway 09 threshold. Due to the height of the buildings interference to the localiser signal in space may be experienced; as such predictive performance modelling is considered necessary and has been conducted as per section 4.5.

4.3.3. Runway 27 Localiser

The proposed development is located behind the localiser and away from the direction of the radiated signal; as such no assessment of the localiser is required.

4.3.4. Runway 27 Glide Path

The proposed development is located behind the glide path and away from the direction of the radiated signal; as such no assessment of the glide path and path is required.

4.4. Distance Measuring Equipment

The CAP 670 Safeguarding Criteria for DME is an inverted cone of 500 m radius with a 2% (1:50) slope, originating at the base of the DME aerial. The proposed development is outside of this area and as such will not require an assessment.

4.5. ILS Assessment Methodology

4.5.1. Modelling Tool

An ILS modelling tool has been used to simulate localiser and glide path course structure results which would normally be obtained from a flight inspection aircraft. The course structure is a measurement of the bends in the guidance signal.

The assessments have been conducted using the Ohio University NavAids Performance Prediction Model (OUNPPM). A description of the modelling tool is provided in Appendix 1 Ohio University NavAids Performance Prediction Model (OUNPPM).

4.5.2. Assessment Assumptions

The Ohio University NavAids Performance Prediction Model is predicated on flat terrain.

The facade of the development has been modelled to be a flat reflective surface, with a reflection coefficient of 1.

No current buildings or infrastructure have been considered as part of the assessments.

4.5.3. Course Structure Assessment Methodology

The localiser are CAT I as such recording of the course structure was made by simulating a flight inspection aircraft flying on the approach path from 4NM to threshold with an angle of 5.5°. The course structure assessment is made from 4NM to ILS point C.

4.5.4. Coverage Course Structure Assessment Methodology

Recordings of the localiser coverage were made by simulating a flight inspection aircraft flying a part orbit about the extended centreline from -40° to $+40^{\circ}$. The orbits are conducted at 6NM from the localiser at 1500' which is in line with the flight inspection profile. This assessment supports the ICAO Annex 10 Volume 1 (3.1.3.3) coverage requirement.

4.6. ILS Simulations Results

The results below considers the complete development. Individual buildings have been assessed with results in line with those shown below.

4.6.1. Localiser Runway 09 Simulation Results

Figure 3 demonstrates that there is the potential for some disturbance to the course structure. The disturbance is very small and it is unlikely that any disturbance would be seen on the flight inspection results.

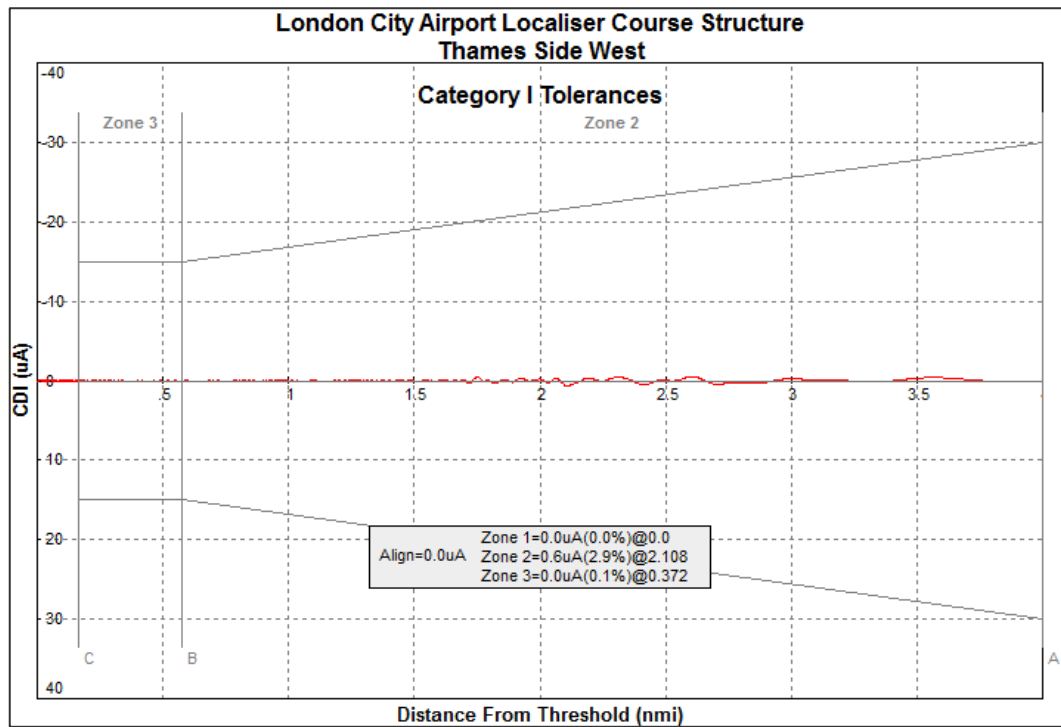

Figure 3: Localiser runway 09 course structure

Figure 4 demonstrates that the development will not impact the localiser coverage.

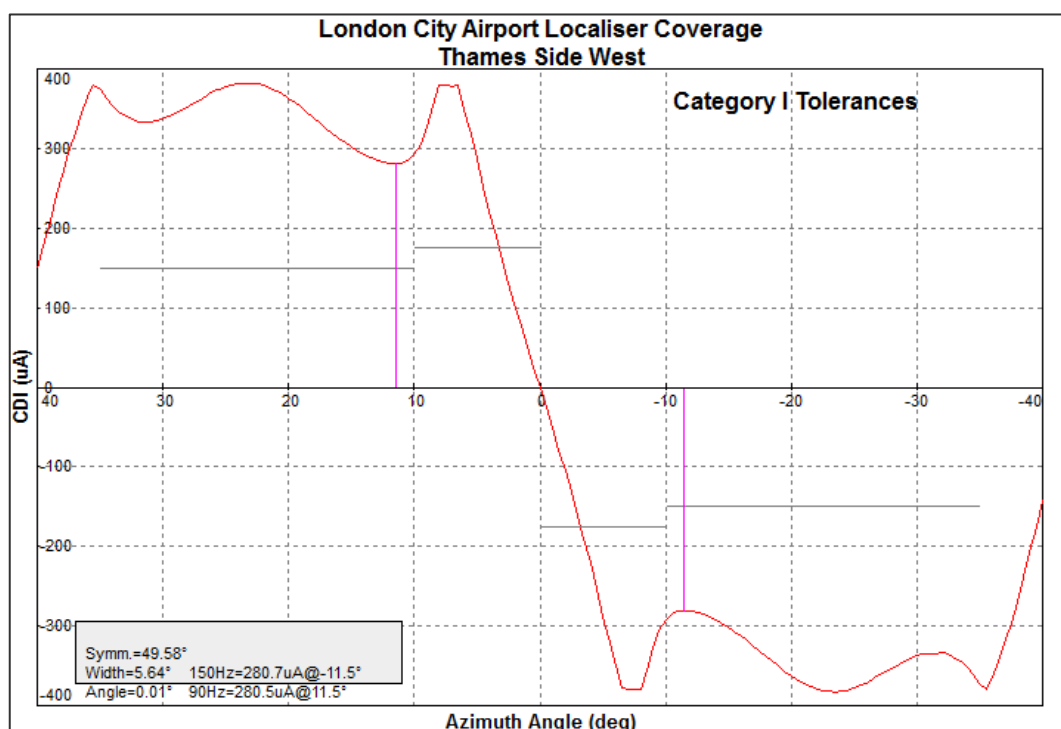

Figure 4: Localiser runway 09 coverage (Clearance)

4.6.2. Glide path Runway 09 Simulation Results

Figure 3 demonstrates that there is the potential for some disturbance to the course structure beyond 1NM. The disturbance is small and may not be seen on the flight inspection results.

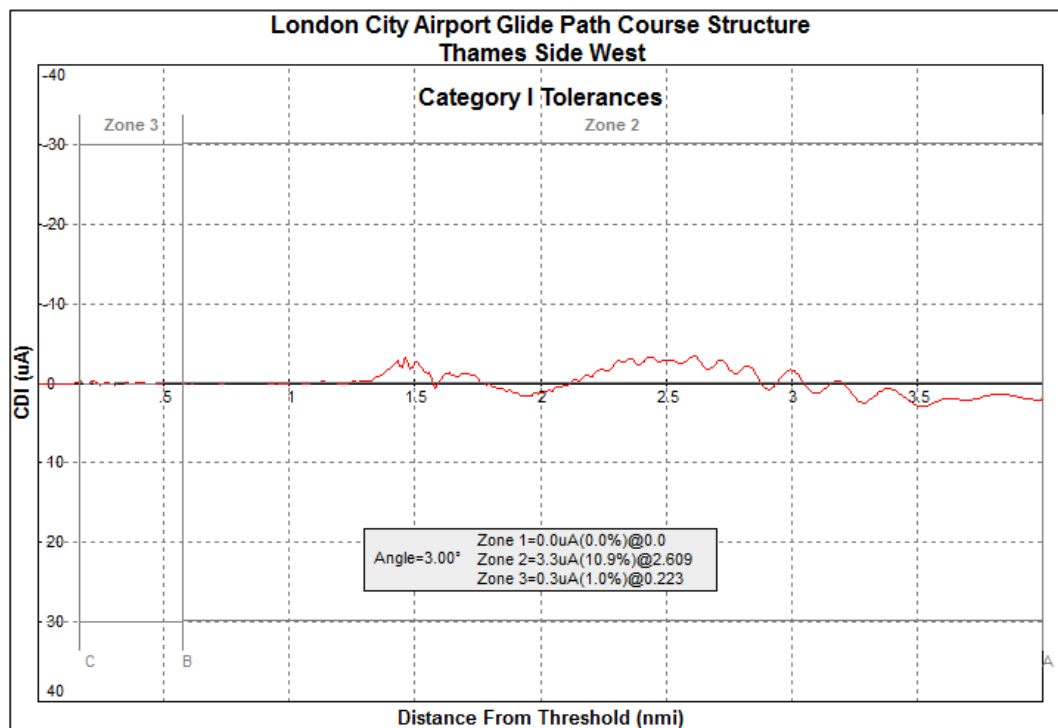

Figure 5: Glide path runway 09 course structure

Appendix 1 Ohio University NavAids Performance Prediction Model (OUNPPM)

This is a two-ray model that calculates the difference in path length between signals arriving at an aircraft direct from the radiating antenna and those as reflected from obstacles both static and dynamic in nature. The direct and reflected radio signals are then combined to determine the signal being received by an aircraft.

The input to the model is provided through the use of a data file, containing the following information:-

- The antenna signal distribution data for the Course signal (includes CSB and SBO signal strengths and phases);
- The antenna signal distribution data for the Clearance signal (includes CSB and SBO signal strengths and phases);
- Antenna radiation pattern (Localiser, dipole for existing and Log Periodic for proposed systems);
- Antenna radiation pattern (Glide Path Kathrein antenna as an example);
- ILS Localiser and Glide Path frequency;
- ILS Localiser and Glide Path Sector Width;
- Details of signal “reflectors”.

Each reflector is constructed from a number of rectangular reflecting plates. The size, location (in three dimensions relative to the position of the ILS antenna array) and orientation of each plate is individually specified. Using a large number of small plates allows complex shapes to be constructed.

The output of the model is in the form of a data file. This file contains two series of numbers that identify:-

- a) Aircraft distance from the ILS Antenna array;
- b) Calculated offset from ideal approach line.

The ILS receiver system on an aircraft making an approach will be moving. The speed of the aircraft will determine whether the receiver has time to react to signals whose magnitudes are rapidly changing (i.e. noise spikes). The faster the receiver is moving, the less likely that the changes will be visible on the cockpit display. The aircraft system therefore has a degree of “in-built” hysteresis. It is possible to simulate this effect within the ILS model by passing the results through a “low-pass” filter. However, using the filter can lead to the masking of some reflections and will result in a small reduction in the magnitude of the calculated bends. In order to determine the “worst case” scenario, the results from the model have not been passed through this filter.

IFP Safeguarding

Thameside West Assessment (Revised Building Heights)

London City Airport

02 April 2020

CL-5482-RPT-002 V1.2

www.cyrrus.co.uk

info@cyrrus.co.uk

Introduction

Silvertown Homes Ltd (SHL) and Greater London Authority Land and Property Ltd (GLAP) (the Applicants), has requested an analysis for an Instrument Flight Procedure (IFP) Safeguarding Assessment on the Instrument Landing System (ILS) and Localiser (LOC) Instrument Approach Procedures (IAPs) for Runway 09 at London City Airport. The Assessment is against a development of 28 proposed buildings at Thameside West, located approximately 1.1NM from the Airport.

A previous Assessment (CL-5410-RPT-002 V1.0) has already been completed but due to a change in design, with the massing of the buildings have been adjusted throughout the masterplan to reflect design discussions with the GLA and LB Newham, but the tallest building remains at the same height as previously proposed since the hybrid planning application was submitted in December 2018, a new assessment was required to validate the changes.

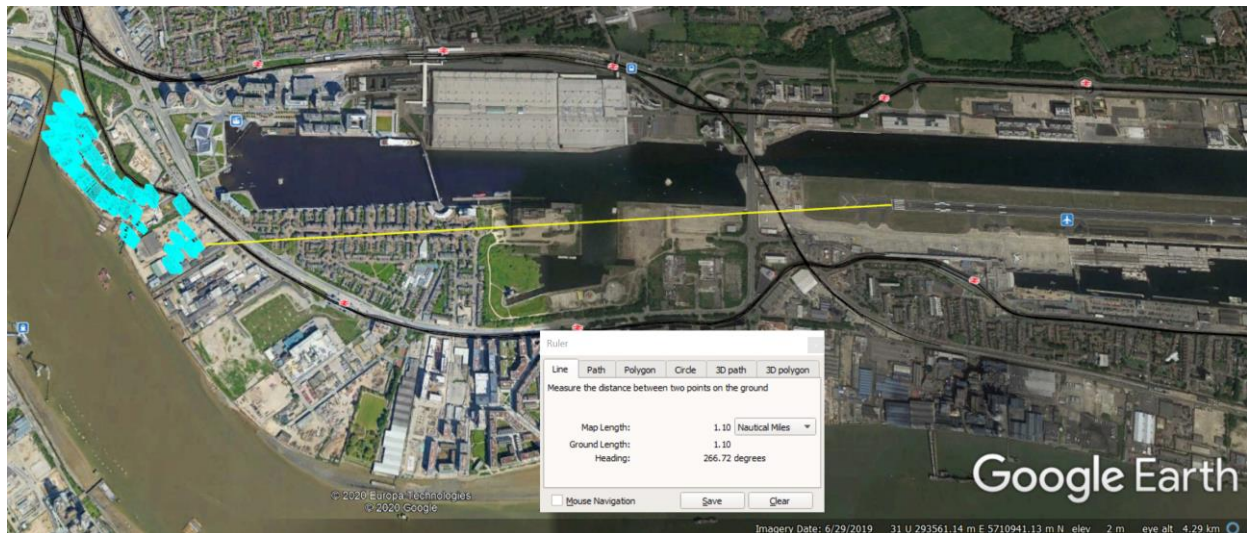

Figure 1: Approximate distance from Runway 09 Threshold

List of IFPS to be assessed:

- INSTRUMENT APPROACH ILS (5.5° GP)/DME/NDB(L) RWY 09 (ACFT CAT A, B, C)
- INSTRUMENT APPROACH LOC/DME/NDB(L) RWY 09 (ACFT CAT A, B, C)

List of data received from client:

- CAP 232 survey data dated 11/04/19;
- 3D Model Development AutoCAD drawings from John McAslan and Partners for Thameside West Phase 1 (Revised) 03/03/20; and
- Supplementary related documentation and files

Assumptions

- 3D Model Development AutoCAD drawings for Thameside West Phase 1 (Revised) are in the OSGB36 co-ordinate reference system.

Assessment

An IFP Safeguarding Assessment was completed for only the Instrument Landing System (ILS) and Localiser (LOC) Instrument Approach Procedures (IAPs) to Runway 09 at London City Airport.

Due to the technical nature of IFP Design, a summary has been provided to decode the information as detailed in Table 1 and states whether the IFPs will be impacted or not.

The technical data for each procedure is provided in a separate report as an addendum to this report and notified as:

- CL-5482-RPT-003 V1.0 Thameside West IFP Safeguarding Assessment ILS RWY 09 Technical Report; and
- CL-5482-RPT-004 V1.0 Thameside West IFP Safeguarding Assessment LOC RWY 09 Technical Report

Assessed Procedure	Runway	Impact	Comments
INSTRUMENT APPROACH ILS (5.5° GP)/DME/NDB(L) RWY 09 (ACFT CAT A, B, C)	09	No	Basic ILS Surfaces for RWY 09 is impacted, this necessitated a review of the Obstacle Assessment Surfaces (OAS) which indicated no impact.
INSTRUMENT APPROACH LOC/DME/NDB(L) RWY 09 (ACFT CAT A, B, C)		No	No Impact.

Table 1: Summary of Assessed Procedures

Conclusion

The ILS DME/NDB(L) and LOC/DME/NDB(L) procedures for Runway 09 are not impacted by the Thameside West development.

Thameside West Assessment (Revised Building Heights) LOC RWY 09 Technical Report

General

Threshold Position	
ID	3744 / 3727
Latitude	51°30'19.90"N
Longitude	000°02'44.73"E
Altitude	5.3 m (17.39 ft)
Parameters	
In-bound Track	095.2 °
Preceding Segment Minimum (OCA)	2000 ft
Preceding Segment MOC	150 m
Additional Parameters / Constants	
Category	LOC
Approach Angle	5.5 °
MA Climb Gradient	2.5 %
TCH at Threshold	35 ft
LOC Course Width at THR	210 m
LOC to THR Distance	2000 m
Obstacles	
Number of Checked Obstacles	26174
